One possibility is that your soldering iron is a little too low in wattage to supply enough heat...this would especially be a problem if the coax shield is heavy because heat dissipates more quickly than the iron can supply it preventing it from getting hot enough to flow the solder. The solution is to get a higher wattage rating iron.

I have also found that sometimes the shield on older or lower quality coax oxidizes and prevent good solder flow. You might try putting some solder flux on the shield before soldering it. That usually solves the problem.

If the shield really is aluminum, you would have to go with a crimp style terminal that could be soldered to the board.

Are you trying to solder RG6? Easiest fix is to go buy a piece of RG59, if
you need 75 Ohm coax, or almost any 50 Ohm coax. I gather there is no wire
braid over the Al foil.

David,
The 520S is supposed to be the best one. For a few more bucks,
get a TS-820S. I've got one and I really like it. 160-10 with DC
or 110VAC built in. Variable speech processor, 6146 finals.

If you want the WARC bands, get a TS-830S. This rig has a
few more bells and whistles.

All of these rigs are basically the same. Very solid, reliable rigs with
excellent performance (IMO).

# 1882. FT847 CW filters

Newsgroup: rec.radio.amateur.equipment
Date: 2004-03-20 18:33:11 UTC
From: 5b4az@qsl.net
Message-ID: <e637e579.0403201033.1dbb583d@posting.google.com>
Source record: 22484

Hi all,

I wonder if it is possible to have two filters for the CW/N mode of the FT847. I have currently installed a 125 Hz Xtal filter which is fine for CW/PSK31 but too narrow for the Feld Hell mode. It really would be nice to be able to switch to the original 300 Hz Collins mech filter for the Hellschreiber mode, since the Xtal filter seems to ring and so smudges the characters on the screen.

My tks in advance to all.

p.s. Please note that my email address is now neoklisk@cytanet.com.cy

Nick,

You might try to contact W4RT at: http://www.w4rt.com

He does mods to install two filters; one SSB, and one CW. Perhaps he might consider doing one for two differenc CW filters as you need.

A word of warning. Actually 2.

The coils in the bottom are a tinkerers delight and many radios have broken cores. The coils are not available. The most tinkered with was the 10m coil. If it is broken the rest of the coils will not align correctly.

Also the 2 relays used in it are NLA.

Other than that great radios. The SE was a 120v only version and didn't have the fixed freq xtal positions. There are a couple of other differences but they don't come to mind at the moment.

---

FOUND THIS IN ALT.FAN.ART.BELL - NOT CONFIRMED
IF THIS PROGRAM CHANGE IS VALID, BUT IF SO IT SHOULD
BE A GOOD PROGRAM FOR ALL RADIO AMATEURS...

---

"Occasional AB Listener" <iamnot@aol.com> wrote in message
news:405C9BD6.7DFD@aol.com...

Tonight (March 20, 2004), at 10:05 Pacific Time on "Coast to Coast A.M,"
late-night radio talk-show host Art Bell is going to take a breather
from the customary paranormal and conspiracy-related format and discuss
a topic that will interest most -- if not all -- radio amateurs,
shortwave radio enthusiasts and broadband users: Broadband Power Lines
(BPLs).

Now under development, BPL is a technology that will allow computer
users to access high-speed, broadband Internet connections just by
plugging the computer into the wall outlet. No need to pay hundreds of
dollars in installation, activation/deactivation and service fees for
Digital Subscriber Lines (DSL) or cable modems, just literally plug and
play.

Fans and supporters of BPL include the Federal Communications
Commission, Power Line Communications Association and local utility
companies. Since power lines are available in urban and rural areas,
while DSL and cable services are limited or inaccessible in some
sparsely populated areas, BPL is anticipated to be a major challenge to
the existing methods of high-speed access. But BPL is not without its
drawbacks.

The American Radio Relay League (ARRL) is concerned about the amount of
RF interference generated by BPL. According to their website
(http://www.arrl.org/tis/info/HTML/plc), "Studies done by amateurs and
regulators worldwide demonstrate conclusively that BPL that uses HF or
VHF spectrum will cause serious degradation of the communications
capability to nearby receivers on frequencies that BPL uses. HF is a
unique international resource that is in use by commercial radio
services, broadcasting, amateurs, government and military operators."

Early Saturday morning, about 2 a.m. PST on 3840kHz, Art himself (radio
amateur W6OBB) and his roundtable of fellow ham radio operators were
discussing the amount of interference -- especially from 2MHz to 80MHz
-- BPL can cause if service is implemented nationally. The hams

conversing with Art on the 80-meter band said that constant buzzing heard on those frequencies will anger shortwave listeners and hams alike if RF interference is constantly heard on those frequencies.

Another problem is the potential health risks associated. Could a substantial increase in RF exposure -- especially around the household -- contribute to the rise in cancer-related diseases? A very close friend of mine, who happens to be a ham radio operator living near Switzerland, explained to me that most of Europe has scrapped plans for BPL because of possible RF-related diseases, as well as RF interference in commercial and amateur/SWL communications.

Nevertheless, tonight's "C2C" is going to be extremely interesting and worthwhile to those who are interested in all forms of radio communications. My friends and I will definitely be listening.

I have one of the small desk clocks that synchronizes to WWVB at
night. It auto-adjusts the internal crystal (or says it does)
to keep itself going during the day. I've found that it maintains
accuracy very well: certainly good enough for anything short of
atomic physics.

I live in the NorthEastern U.S., where the signal is relatively weak
(look at the maps at the URL a previous poster supplied) and don't
have any significant trouble with it. I looked at the NIST web
site, and I think they said something about boosting the power of
the WWVB signal: so if you had trouble with it before, it might
be worth trying again.

Yes, not to belabor the subjct, but WWVB is 60Khz,
while WWV, & WWVH are 2.5.....20Mhz.

There is no voice with WWVB. Howver, for calibration purposes
WWVB is more stable, and accurate.

No, the second ticks are 5 cycles of 1000 Hz on WWV and 6 cycles of
1200 Hz on WWVH.

You're right a wwv or wwvh clock both receive and decode
the same manner. Both wwv and wwvh transmit at 2.5, 5. 10, 15, & 20Mhz.
There is no 60Khz on Kiuai.

We were there at the same time. 69-87 for me.

I once had to put in a buried seismic alarm system right across the street
from that transmitter.
Took some interesting filtering on the signal lines, not to mention three
weeks to ditch through the coral.

## 1894. F.S. Bird 43 wattmeter element 500C

I have forsale a bird wattmeter element that I got with a bird 43 I
purchased, it is the 500C element capable of up to 500 watts at a freq.
range
from 100-250 Mhz. I would like to get $75 shipped.

> grounded delta).

Commonly used around here is a variant of normal residential 240/120
Volt single phase service, used in homes needing a small amount of 3 phase
power for HVAC loads etc., which is 3 phase 240 delta w/ one transformer
secondary split for 240/120 with a grounded neutral. The added phase wire
(called the high leg or wild leg) measures 208 Volts to ground, but is not
meant to be used except for the _few_ 3 phase loads.
I may have misunderstood, but I thought the question was about
residential and commercial lighting apps. (I know I overlooked the Europe
clause).
Apologies.
Dave

## 1903. Control signals for Kenwood remote antenna tuner?

Newsgroup: rec.radio.amateur.equipment
Date: 2004-03-21 06:44:56 UTC
From: dplatt@radagast.org
Message-ID: <105qef865691n86@corp.supernews.com>
Source record: 22405

The Kenwood TS-2000 and several other Kenwood HF transceives have a six-pin Molex connector, to which a Kenwood AT-300 external antenna tuner can be connected.

From what I can see in the TS-2000 schematic, this Molex connector appears to have five active pins - power, chassis ground, analog ground, and what appear to be two data signals TT and TS which are routed to the control board. These appear to be bidirectional signals, both read and driven by IC8's GPIO pins.

Does anyone have any information on the actual signalling protocols used on these pins? I'm assuming that there are signals corresponding to "tuner is present", "tune now", "tuned", "failed to tune", and "bypass", but haven't been able to find documentation anywhere.

advTHANKSance for any information!

Thats what i found out today. That its all RG6 locally ex. homedepto
radioshack. I can't seem to find any other sources (i'm at lehigh
university in PA in case anyone is close) I only need at most 2 feet of
this. Would anyone be able to ship me some if i were to cover shipping or
think of an alternative. I have a 2.4 ghz wireless network up right now
which i need to attach a home made antenna to. Aside from the antenna and
wireless transmitter all i have right now are f-connectors and a lot of rg6.
The antenna and card are still connectorless. I"m open to any solutions
some one may have. thanks in advance

HI,

My friend Anthony did a new version of the electromagnetic spectrum from 31.2 mHz to 6.52 EHz but this time placing the bands on straight lines instead of tilted ones. Here is the result : http://unihedron.com/projects/spectrum/spectrum_straight.pdf

Bookmark http://unihedron.com/projects/spectrum/ as this version will soon be updated to take into account new corrections (like medical devices at 405 MHz, etc).

A few other bandplans and frequencies allocations are available at this address : http://www.astrosurf.com/lombry/qsl-download.htm

Well, you could make a 400V 50Hz motor that also runs on 480V 60Hz :)

if you use the fixed freq crystal slots, does the 700 band-split problem still exist? in other words, using xtals for 144.81/145.41 is ok. you just can't use the vfo to tune this.

| Commonly used around here is a variant of normal residential 240/120
| Volt single phase service, used in homes needing a small amount of 3 phase
| power for HVAC loads etc., which is 3 phase 240 delta w/ one transformer
| secondary split for 240/120 with a grounded neutral. The added phase wire
| (called the high leg or wild leg) measures 208 Volts to ground, but is not
| meant to be used except for the _few_ 3 phase loads.

I've seen three phase delta transformers with a center tapped winding, but the specs indicate that the 120 volt loads should total no more than 5% of the nameplate rating. These are genuine 3-phase transformers. So I am guessing that what you are referring to has a big transformer for the single phase load and one or two small transformers to add the high leg.

That might explain many cases where I have seen what I call "mom and baby" configurations on the poles. There's a big fat one with 3 secondary wires, and a small one with 2 secondary wires. So I'm assuming big momma was connected across two primary phases and outputs 240/120, and little baby was connected between the third primary phase and ground and outputs the 208 volt teaser, forming a Scott-T setup.

I'm sure I could send you several feet of RG-59 if all you need is
some 75 Ohm coax with copper braid. If you need a different impedance
I can probably come up with just about anything else that's common.

OTOH, I'm not familiar with RG-6. Is this the stuff the cable TV folks
use? Is it a braid or foil shield? If it's foil, there's usually a
copper shield drain wire that you can solder to.

Email me with your address and what you need if you need some
different coax.

Source record: 22424

Hello Garique, Dale, Frank, Michael and Gary,

I appreciate the ideas. I am not sure how to interpret some of the answers, so let me give more details. I set up an MFJ-564 paddle into an MFJ-464 Keyer/Reader which converts the Morse into visible letters, and then feeding that into a PC running HyperTerminal to display larger text.

I'll really show my ignorance here - It sounds like the "Iambic" function must be in the keyer/reader and not in the paddle hardware (I didn't even look for an IC chip on the MFJ-564 paddle)? So that means any pair of switches I use will properly feed the keyer/reader? Then I just need to find a switch that she can reliably press and release. Do I have it right now?

And yes, I checked out the eye reading software and the prices were high, up to $30,000. The above hardware was only about $300. If it works that will be great.

Thanks to all :-)

Another thought:

There is a group called Handi-Hams, which consists of both those with
various physical challenges, and those who build adaptive ham radio
gear.

I don't if you have already, but they might be worth chasing.

Happy trails,
Gary (net.yogi.bear)

That's about the size of it. If you press one paddle of an Iambic
keyer, it goes "dididididididididit" until you release the paddle. If you
press the other paddle, it goes "dah dah dah dah dah dah", again, until
you release the paddle. If you press both paddles, it goes
"didahdidahdidah" until you release at least one paddle.

> And yes, I checked out the eye reading software and the prices were high, up

Ouch.

> The above hardware was only about $300. If it works that will
> be great.

ISTR the New Jersey QRP club had a "finger tapper" key at one point. I
have no direct knowledge of how durable the key was or what type of
force it was set up to need.

And now having dredged the address from the depths of my mind I can
report it can be seen at http://www.njqrp.org/tiptapper/index.html and
it's actually named the "Finger Tip Tapper". It might be worth a look.

Tks,

I also had a good look at the circuit and the only way seems to be to
"hack" the pc board that my Inrad xtal filter is connected to, so that
a second filter may be switched with micro c/o reed relays, possibly
at the cost of some signal leakage.

Rick Nevill <lBt7c.80788$u_5.35677@fe2.texas.rr.com>...

^ I set up an MFJ-564 paddle into an MFJ-464 Keyer/Reader ...

I'm not familiar with the equipment so I can't comment here.

^ It sounds like the "Iambic" function must be in the keyer/reader
^ and not in the paddle hardware ...

True. There are two devices: the key and the keyer. At one time the key was simply a mechanical switch that turned on the transmitter. The keyer was later added between the two to give it more versatility.

I prefer a straight key but I understand that there are in general three types of keys:

straight - the traditional type.
paddle - push one way for a DAH and the other way for a DIT.
double paddle - Touch one for DAH and the other for DIT.

The paddles require an electronic keyer to handle the timing and switching. A straight key can also be used with the keyer or it can be wired directly to the radio.

In your case you can probably use any type of keyer and it is the actual key that you need to customize.

The radio might have a built-in keyer -- mine does, the Yaesu FT-897 -- so check the operating manual for it. In my case I need only plug a key into the radio. The miniature phono plug has either two wires for a straight key or three for a paddle.

Easiest thing would be to just order from a place like The Wireman
(see website for phone #), and ask them for a few feet of 75 ohm stuff
is easily solderable.

Well, don't UK licensed radio users pay for the BBC?

In any event, Replay Radio offers Coast-to-Coast for download without going through the show's website. Yes, Replay Radio is also not free, but it is reasonably priced and offers hundreds of other shows.

Some concerns with these:

The precision of when/where exactly they activate is a bit variable,
and it could be hard for crisp code xmissions. There is a fairly wide
"maybe" area with this type of switch.

Experiment with the ones on some elevators.

OSHA does allow them in limited circumstances in lieu of the spring
activated buttons used as go/no go switches for industrial equipment,
but that is a different situation.

Also note that some capacitive switches are sensitive to stray RF.

Worth a look, but I would go for some sort of photolectric device
first, where the user holds a paddle or some opaque object and waves
it back and forth to cut the dit circuit or the dash circuit. Much
more particular about the on/off distinction. One could use these NO
or NC as the situation warranted.

I have a Heathkit SB-102 that I have used for a couple of years primarly on CW, but I had wanted to use it some on SSB. On CW it puts out a good solid 100Watts.. But on SSB it only puts out about 10W unless I whistly loudly into the mic. I tested the tubes on a tester, not sure if it works or not, but they appeared to be good.. and i've replaced all of the resistors I could see that might have lost value over the years. Anyone have specific experience with a SB-102 and the SSB audio input going soft ?

I could mail you some, but there's bound to be someone closer that
could get it to you faster.

Another option: crimp on an "F" connector and solder an F socket to
the board (perhaps with short wire leads, if the frequency isn't too
high).

You can also get solder that works on aluminum, but that might well
take longer than getting coax with copper braid. BTW, I have Teflon
RG-6-type that has solderable braid (plus foil).

Cheers,
Tom

Thanks to all of you guys! Gary, Robert, Frank, Dan and Steve...

I just checked my Yahoo.com email (that I use to avoid spam), and found a message from Jerry telling me about http://www.fingertiptapper.com/. which is also the product Robert mentioned. The fingertiptapper cards look like they would work great with adjacent fingers like index and miidle finger. I have emailed the company to see if I can get parts, or a card that splits wider to accomodate the two-finger spacing between the ring and index finger.

Also, thanks for the info on Handi-Hams Gary. They may have already solved this one. :-)

I go see the person tomorrow. I'll see how much control she has of those fingers. I should know more after that. I also found out that some pretty smart folks already tried similar things with her 20 years ago and failed. I hope the new technology can make the difference. :-)

73,
Rick

<< On CW it puts out a good solid
100Watts.. But on SSB it only puts out about 10W unless I whistly loudly
into the mic. >>

Jeremy-

I had two SB-102s and an HW-100 about 25 years ago. Neither had low audio, although there were numerous other problems.

From the wording of your message, I assume the radio did have good audio, but now doesn't, using the same microphone et cetera. As with most tube rigs, the first thing to do was to check the tubes. Your tester would probably have shown up a problem that would have caused your low audio, even if it wasn't a conductance-type tester.

The microphone must be high impedance. If you are using a low impedance microphone, you just might not have noticed the low output before.

Is the microphone from Heath? They supplied a hand microphone with a high impedance ceramic element, similar to the Turner 350-C. If you happen to have a non-Heath microphone with a crystal element, it is possible the element is going bad. A Rochelle Salts crystal element must be kept at just the right humidity level. If it gets too humid, the crystal absorbs moisture and dissolves. If it gets to dry, its "waters of crystalization" evaporate and the crystal turns to powder!

When you replaced resistors, did you refer to the manual for the correct value? Some of the old resistors can be misread. Mistaking red or yellow for orange in the third band, would make a ten-fold error.

Beyond tubes, microphones and resistors, there may be an electrolytic capacitor that has either developed leakage or has dried out. Most of the lower value capacitors are probably OK, but no guarantee.

If you have the manual, there are probably voltages marked on the circuit diagram. It might help isolate the problem if you checked them with a high impedance meter.

73 & Good Luck

Yes, I referred to the manual for the values of the resisters. To explain. When i upgraded to General in 1997 or 1998, a friend donated the radio to me in "non-working" condition.. and another friend fixed it. In his fixing of the radio he said all he had to do was replace some resisters and it started working nicely.

Upon closer inspection he didn't replace the resisters but he patched them. As in he added a resister in parallel to the existing resister to get it to the resistance it was supposed to be instead of removing it and putting in a totally new one. What I did was take both out and put in a totally new one on all of them i could find.

As far as i know the entier time i had the rig it was low on output on SSB, but i didn't notice until i had had the rig for a year since i was a tech-plus and used the rig only on CW.

First off I tryed the stock heathkit mic that i believe came with the radio and it was even worse, it would barely put our 5 - 8 watts. I found a high impedance amplified microphone that i wired up and hooked up to the radio, which then got its output up to around 10 watts.. with peaks if i whistle into it loudly. I read the manual and attempted to match the impedance of the mics to what the rig wanted.

The capacitors is something i never thought about until i was reading your message. I've restored a old AM broadcast band radio once and I had to replace all the capacitors, but I never thought about it on the SB-102.

But you need to look at what's different when the rig moves from CW
to SSB.

There are a number of methods that are used to generate CW in an SSB
rig, and how it's done will help to isolate the problem. You can
feed an audio tone into the AF amplifier feeding the balanced modulator,
and there there is very little different. You can unbalanced the
balanced modulator. You can feed the carrier oscillator around the
balanced modulator, and maybe someties it's even fed around the IF
filter. I have no idea which scheme is used in your rig.

The audio tone method would suggest the microphone, or something in the first audio stage or so (depending on where the audio tone is injected). It can't be the balanced modulator, or anything that comes later.

Unbalancing the balanced modulator would suggest the problem lies in the stage or stages between the mic jack and the balanced modulator, unless the microphone is faulty. The balanced modulator should be fine, as well as anything that comes later.

Feeding the carrier oscillator around the balanced modulator, and I'm not sure how common this scheme was, would leave the problem with those audio stages or the balanced modulator.

If you had an audio generator of some kind, you could try applying it right where the audio goes into the balanced modulator. I'm not sure what audo voltage level should be there, but if you applied that same audio voltage and you get full power, you know the problem lies before that. Then you move the AF generator a stage closer to the mic jack, and see if there's a drop-off in power output (one is expecting that you have a dummy load on the output for this testing). Then move the AF generator to the mic jack and see if there's a drop-off.

At some point as you move towards the mic jack, there will be a drop-off, and that will be the stage that needs work. Maybe the tube, maybe a resistor, or maybe a coupling capacitor or bypass capacitor.

If you still get a low output with the signal generator feeding into the balanced modulator, then the problem lies in the balanced modulator.

Or, the IF filter has gone bad (not likely, and you should notice a deterioration on receive), or the carrier oscillator is not on frequency. Again, I'm not sure of the rig's scheme, but the carrier oscillator crystal may be changed when going to CW. It's possible the SSB crystal is off frequency, and so the IF filter isn't passing the signal properly. Scratch that, since you'd be noticing a problem in receive. Feed the AF generator into the balanced modulator, and vary it's frequency to see if the output changes significantly as the audio frequency changes.

The problem can be broken down, but one has to start by looking at the schematic to see what could be the problem.

If its RG6 then it does have a continuity wire, you have probably
nicked it off in stripping back the outer sheath. The best given so
far suggestion is to use a twist on "F" connecctor - unless you can
borrow the proper crimping tool for crimp connectors. BTW, cable
losses at 2.4GHz will be astronomical, virtually nothing will be
getting up to the antenna. - or is it 2 feet from the card, then
acceptable. Even so, RG6 has the only virtue of being cheap, with
highly variable quality. have a talk to the engineering department at
school (if there is one) or do a internet search for a local 802.11
group near you, they are usually glad to assist in these cases. If you
have lots of money, get a USB wireless card and put it on the back of
the antenna, you can then run heaps of cable out and so get it to a
high spot.

<< The capacitors is something i never thought about until i was reading your message. I've restored a old AM broadcast band radio once and I had to replace all the capacitors, but I never thought about it on the SB-102. >>

Jeremy-

I've been through that with old radios as well. Back in the late 50s or early 60s, there was a major improvement in capacitor construction. They introduced a layer of plastic film (mylar?) with the paper, and drasticaly reduced leakage as the capacitor aged. That is why I wouldn't just replace capacitors without some other symptom.

Another thing to check, is whether the microphone amplifier tube is the correct one. If a 12AU7 had been installed in place of a 12AX7, the gain would be somewhat lower, but the tube might check 100%.

If you have the service manual look up VCO-0. If you bring your finger near it and it duplicates the problem then that is the source. Use a hair dryer and melt the wax out of the VCO and the resolder all the connections in it. Align it to spec and that should fix it.

## 1964. ft-100 with accessories and upgrades...

Newsgroup: rec.radio.amateur.equipment
Date: 2004-03-23 16:36:30 UTC
From: N5XXM <n5xxm@grandecom.net>
Message-ID: <1060pqc6kcrvjba@corp.supernews.com>
Source record: 22566

i am offering this sweet ft-100, this is an ft-100 that is very close to mint,with all the upgrades from yaesu, with the ct-62 $29.00 cat interface cable, and the ysk-100 $79.00 seperation kit, manuel, box, power cord, and mh-36 touch tone mic, this baby is ready to go,i am looking for an icom 706mk-2g, with seperation cable in real good shape,or trade for other vhf/hf gear,or will sell for $695 plus shipping from 79761, double boxed.
>>>it was pointed out to me a new ft-100 WAS $699.00 plus shipping from aes but they are no longer available from AES, and are $949.00 plus shipping from gigaparts,plus a new one dont come with over $100.00 in accessories<<<
price quote from gigaparts as of 3-23-04 for this entire setup is $1058.00
n5xxm@grandecom.net
thanks!
Ken.

## 1966. Re: Which VHF's Easily Programmable?

Newsgroup: rec.radio.amateur.equipment
Date: 2004-03-23 19:36:55 UTC
From: summitrt@aol.comnojunk
Message-ID: <20040323143655.01431.00000324@mb-m13.aol.com>
Source record: 22568

The Icom H16 is an older radio but works great, is a commercial radio and can be programmed from the keypad. I see new old stock ones on ebay for under $200. and good used ones for under $100.

# 1967. Re: Practical experience with small HF trcv e.g. Yaesu FT-817

Newsgroup: rec.radio.amateur.equipment
Date: 2004-03-23 22:36:45 UTC
From: k5dh@raytheon.com
Message-ID: <1_28c.5$pi7.4@dfw-service2.ext.ray.com>
Source record: 22569

Hej Hans,

I have owned both the FT-817 and IC-703. I liked the IC-703
better, so I sold the FT-817. Both are great little radios
that will surprise you with their performance. Keep in mind
that the transmitter in both rigs is QRP, so all of the normal
QRP caveats apply. Both of those rigs have great receivers,
especially when the optional CW filter is installed. The 703
is almost identical to the IC-706, except for the transmitter
power, so if you have experience with the 706, you'll already
know how the 703 performs.

Some of my experiences with the 817 and 703:

I used the FT-817 on a trip to Delaware in December 2002, and
I worked stations all over the USA, as well as some in Europe
and South America. The antenna was an end-fed wire 12 meters
long, fed with an antenna tuner.

I used the FT-817 on a trip to Gothenburg in May 2003, where I
operated as SM6/K5DH for a few days on CW and SSB. I worked
stations all over Europe with just a couple of Watts and a
base-loaded antenna only 2.5 meters long sticking out of my
hotel room window. Fun!!!

I used the IC-703 on a trip to Florida in December 2003, and
worked all over North America on 20m and 40m CW using an MP-1
antenna attached to a fence outside the window of my room.

Does this peak your interest in QRP? :)

73,
Dean K5DH

Let me add one other possibility based on experience with an old SB110

which I think uses similar circuitry. I was using the rig in a VHF
contest
and not getting through to a station about 200 miles away that I
normally worked easily. Switched to CW and got a 599 and that made me
realize the SSB output was down. I went through the same reasoning that
it must be something that was different in SSB mode. However the
problem turned out to be the tuning in an IF stage; it had drifted far
enough off resonance to drop the drive way down. However in CW the
unbalanced balanced modulator normally produced much more drive than
mike audio so it made up for the mistuned stage. With the stage
retuned, SSB was now full power and the drive control had to be reduced
for CW use. Bottom line - it is worth checking the tuning on each of
the IF stages.

Message-ID: <BC864326.40875%kl0s@cox.net>
Source record: 22571

I had a somewhat similar problem on my 940S on transmit....it began by showing unstable output on 15m when operating FSK (i.e. power output would fluctuate) then started to spread to other bands.

I re-seated every connector on all the boards I could physically get to and used a little bit of DeOxit when putting them back. Power output is rock solid now all bands, all modes.

Who knows where the problem was....I'm just glad it's gone! Hopefully my 18 year old pal will keep going for years (although I do threaten it every once in a while by showing it a picture of the new Icom 7800 just to let it know who is boss!).

that wouldn't surprise me at all. Of course by now I'm sure the radio has more problems than what i have posted to this newsgroup. It has been sitting in a closet for a couple of years.

The first time it sat in the closet for about 2 years and I hooked it up for a friend to use we had to re-align something. We weren't exactly sure what we were doing at the time but we adjusted the pots on the bottom that were labeled for each band until it produced the highest output, which came to be about 75 watts, at that time. Whenever I get to get it out of the closet and hook it up again, which i plan to do sometimehere, I hope it still puts out at least that much and that I can sort out the origional problem w/o having to replace a bunch of stuff.

## 1971. FS: Nye Viking MBVA tuner

Newsgroup: rec.radio.amateur.equipment
Date: 2004-03-24 01:25:11 UTC
From: k9sqg@aol.com
Message-ID: <20040323202511.08963.00001900@mb-m14.aol.com>
Source record: 22573

This is the legal limit ++ tuner that is no longer being made. It has the built-in antenna switch, auto-computing SWR meter, auto-power switching wattmeter, and built in balun. This is the preferred older variant with 1/4 inch silver contacts, not the silver plated slot head screws that can't take as much current. Have an excellent copy of the mail. No scratches, dents, dings, etc. Inside and electrically it is a 9.9 condition. Only cosmetic flaw is that some of the front panel lettering is "weak", but perfectly readable. Digital pic is available if you want me to email it. $450 and will split the shipping to continental US only.

73s,

Evan

Does anyone know where I can find replacement cables for the Hygain HG-52SS
Tower.
It is very similar to the Triex W-51, but the manufacturer of that tower
says there cables won't work.
If you have any ideas, please send email to K4KAL. Look me up on QRZ.com

Thanks,
Keith

# 1977. FT-5100 SubBand off frequency???

Newsgroup: rec.radio.amateur.equipment
Date: 2004-03-24 10:50:55 UTC
From: mike <spamme0@juno.com>
Message-ID: <4061680F.7000309@juno.com>
Source record: 22579

FT-5100 SubBand off frequency???

My Yaesu FT-5100 subband frequency is off by about 5KHz.
The reference frequency and second mixer frequencies
seem to be right on. That leaves the two ceramic filters
in the subband detector, the IF filter and the demodulator.
I'll have to set up a sweeper to figger out which one.

There doesn't seem to be anything tweakable except the
main ref frequency. Seems like they'd need really tight
control of the ceramic resonator frequencies to make this work.
I'm guessing that substitution of parts is out for this reason.

Resetting the radio didn't help.

Is this a typical ceramic resonator failure mode?
Other ideas?

Or am I missing something?
I don't have the service manual, so if there is a calibration
constant that can be set, I'd appreciate hearing about it.
A PDF of the service manual would also be appreciated.

This is a recent used acquisition, so I don't know the history.

Thanks, mike

# 1978. Re: Atlas 210x--Is it a carrier balance thing?

Newsgroup: rec.radio.amateur.equipment
Date: 2004-03-24 13:28:34 UTC
From: Roger Stierman <RogerStierman@netscape.net>
Message-ID: <c3s2g2$eh9$1@home.itg.ti.com>
Source record: 22580

I'm not sure I understand from your description of the problem, whether you hear the steady carrier in REC after transmit or during transmit.
But, on my Atlas 180, after years of non-use, I had a feedback squeal in receive when the audio gain was turned up toward maximum audio. If I turned the audio gain to 3/4 full gain or less, the feedback stopped. Then after about a week of operating like this, the problem went away. I think I was lucky and an electrolytic capacitor in the audio curcuit that was marginal re-formed its dielectric layer and is now functioning properly. If your 210X has been idle for a long time, maybe it's somethin like this and not a transmit problem.

I'm selling my immaculate Icom 756 Pro II, about a year old, with its' matching Power Supply and Speaker. Comes with all the miscellaneous equipment that came with it - hand mic., power cables, etc. Original Manuals and boxes.

Radio's had very little use.

$2,000 for the whole setup (will not separate) or will possibly trade for an mint 990 with all filters or similar.

Prefer pick up - will meet within 100 miles - or will split shipping costs.

Thanks.

John
St. Louis, MO

Hi All,
I just ran across an old DSI 3600A frequency counter at an
auction for $1. I was hoping that I might be able to use this to help
check the alignment on my old Swan 500CX. Problem is, it had no
documentation with it and the only other freq. counter I have used was
a radio shack handheld one w/the BNC whip. It has a pair of unlabeled
PL-259 connectors on the backside. Only controls on the front side
are the direct /pre scale selector for the .1 or 1 sec. gate. Also
has an "oven" on it, which I am not quite sure what that exactly is.
Was wondering if anyone could comment on the use of this one. Sorry
to sound so non-electronics savvy for an amateur op, but any help
would be appreciated.

Thanks,
Sam Bradshaw
KB8ZZS.

# 2000. Triplett 3423 meter movement help needed

Newsgroup: rec.radio.amateur.equipment
Date: 2004-03-25 14:38:35 UTC
From: sam_lloyd18@yahoo.com
Message-ID: <d44352d4.0403250638.7fcd3f08@posting.google.com>
Source record: 22502

I've been attempting to repair the meter movement in my Triplett 3423 tube tester to correct an open circuit on the coil. The coil wasn't fried, it just had a bad solder joint from the winding to the "terminal" on the needle (front)side of the meter.

The meter now operates(!), although not as smoothly as it should. The spring appears to be binding slightly due to a lack of planar concentricity (best way I know to describe the problem), causing sticking and poor repeatability. In other words, if you lay it on a flat surface some sections of the spring will not lay flat, but will stick up. I have spent a great deal of time gently poking and coercing the spring, and while it's better than it was when I started, I just can't seem to correct for the apparent damage I incurred when I first ripped it apart.

So, it appears I need to replace the spring. Does anyone know of a source for clock springs for meter movements? I don't know if there are standard sizes, but FWIW the meter is a 4.5"x4", 100uA, 250 mV type.

I may end up replacing the meter movement entirely, but I'd prefer to just replace the spring as I've developed a decent skill level in working with this stuff.

Any advice or direction as to a source for clock springs would be greatly appreciated.

Thanks,
Sam

I had a 520 SE (520 S Economy) for 14 years.

520 was 5 band and 120 vac or 12 vdc
520 S had 160 meters
520 SE had 160, did not have 12 volt.

It did not have the 12 volt input, so it did not need a heater switch. In place of the heater switch was a wide / narrow switch to let you run the ssb or cw filter when in the cw position. ( I rewired mine to allow either filter in any mode, and used the cw filter for rtty). It did have four fixed crystal postions, I put in two crystals for Packet Radio frequencies.

It's now being advertised in the UK at 6400 Pounds, which, at the present exchange rate, must put it up around the US$11K. But I think the UK price includes tax (15% or more?); and UK prices are typically much higher than US prices, even when the tax is deducted.

I am interested in this dual bander for the car. I want a radio that is useable for general scanning as well. Can anyone comment on the scan rate of this radio? Fast/Slow? How does it handle intermod?

Thanks, JOE

My experience is that US prices in US$ translate directly to UK
prices in UKP, with no change in the numbers, for most consumer
electronics.

I'll be looking for it here in the US, with prices around US$6400.

Message-ID: <c3vc9m$6p9$1@newshost.mot.com>
Source record: 22508

Been there, done that.
Are you ABSOLUTELY sure there is no foreign matter in the movement somewhere. Frequently, some iron finings or whatever will get sucked into the magnets. The hint is where you say: "sticking and poor repeatability". I've seen this all too many times when sticking my nose where it doesn't belong (I do custom meter faces). IF the spring has only planar irregularities and the turns do not hit anything else (including adjacent turns) I see no reason why it should "stick". Look V E R Y carefully. The magnets are very strong and Murphy was wise.
Look where the winding bobin is when the "stick" occurs. There are a lot of places where some foreign matter can cause this. Bobbins typically have four sides as well as an "inside" and "outside" surface to hit slivers and some of the clearance places are difficult to see into. Tip-toe lightly & gud luck.

## 2007. ft-726 440 modification help

Newsgroup: rec.radio.amateur.equipment
Date: 2004-03-25 23:59:47 UTC
From: Daniel Curry <dod1450nospam@nospampanix.com>
Message-ID: <c3vrpj$72f$1@reader1.panix.com>
Source record: 22509

I am looking for any help on how to modified my ft-726 430 module
to move from 430-440 to 440-450 Mhz. I have found something from
www.mods.dk that mentions to close five diodes. I had made the modification,
but I am unable to tx/rx 440-450. It still tx/rx from 430-440. It does show
440-450 on the dial display now.

# 2008. Re: Kenwood TS-520, 520S & 520SE

Newsgroup: rec.radio.amateur.equipment
Date: 2004-03-26 01:52:31 UTC
From: cabbanis <cabbanis@cabbanis.org.uk>
Message-ID: <c402da$4ev$1@newsg2.svr.pol.co.uk>
Source record: 22510

I got the TS520S it works on Top Band but is restricted to 10 watts. If you try to turn up the juice more than that,
it might burn the ceramic base, wire wound choke,
that sits in between the 2 B6146 valves
(well it did on mine) I tuned it for top band, wanged up the audio, and a puff of smoke came out of the finals box.
I read the book, rewound the choke, and asked a few questions. I was advised that the set was governed some how on top band, as there was a power restriction on part of the band when the set was built. (Still is on parts)
Mine tunes up a treat on all other frequencies,
its just restricted on 160.

# 2009. Re: Triplett 3423 meter movement help needed

Source record: 22511

Steve,

Thanks for your comments. I suppose I haven't ruled out debris completely, but I cleaned it pretty well with IPA when I had it apart, then used canned air after reassembly. As you mentioned, I believe the problem is that adjacent turns of the spring are rubbing in certain positions, and possibly crossing, hence the "stick" problem. This is what I was trying to say when I mentioned the planar issue originally. It's hard to see, but it looks like there's a concentricity problem, too- before I attach the outer end of the spring the spiral looks fairly decent, but as soon as I move it into place and attach (solder) the outer tip, the turns are no longer evenly radiused from the center. Also, the travel is very smooth when the spring is removed, so again I believe this points to the spring as the culprit.

Another thing I didn't mention before is that the meter requires greater current to cause FSD now than it did previously. And when I set the zero adjust it tends to under-report all readings, i.e., the line test gives a position of around 1/4 scale rather than 1/2 scale.

Any advice?

Thanks,
Sam

From: johnbartley@email.com
Message-ID: <f90c7f43.0403252352.7abf9b33@posting.google.com>
Source record: 22515

1. Do NOT answer me by e-mail. I do not have the generator, I am only posting this here as it likely will take a ham to fix it, and likely a ham will appreciate it.

2. For details, go to
http://groups.yahoo.com/group/freecycleportland/message/15893
which has a link to the poster, who wrote:

OFFER GENERATOR: World War II Gasoline Generator Type B6B (MIL -G-4028). 9.5KVA (with 120V & 240V outlets). Manufactured by Fabricon Products Inc. (River Rogue, MI). Designed by Wolverine Diesel Power Co (Detroit). Needs new wheel. Needs work. Located in Cannon Beach. Picture available.

3. Again, I will not, repeat, not, answer any e-mail on this subject. I'm only posting this here because it seems it ought to be in the hands of a ham. If interested, go to the FreCycle Portland list and start from there.

73s & best regards

# 2014. PA Tube Specs HELP!!!!!!!!

There are quite a few on eBay, going for less than USD15 from the looks of
it. Go to ebay.com and search for "813 tube." You may as well keep it as a
souvenir.

As someone else said, ebay is an indicator of what buyers will pay for used items. For a price on
new tubes, try RF Parts.

I'm not certain, maybe just a coincidence, but there's a Tom Gibson I know/met who's has some ties to Montana. He may have worked up there for some time. This fellow was also a maritime operator and is currently (I hope!) an officer on the museum ship John Brown (Liberty Ship in Baltimore). Last time I saw Tom was aboard last year. Might this be the same person?

# 2026. Icom 756 Pro II sell or trade

Newsgroup: rec.radio.amateur.equipment
Date: 2004-03-26 23:53:24 UTC
From: John SBC <jh-lewis@sbcglobal.net>
Message-ID: <Un39c.11144$Cl5.6155@newssvr22.news.prodigy.com>
Source record: 22528
Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap

Hi all,

I'm going to sell or trade my Icom 756 Pro II. Radio is in immaculate condition and comes with the matching Speaker, Power Supply, boxes, manuals, accessories bag, etc - just like new - about a year old. It's seen little use - primarily used for SWL'ing - and kept covered when idle...

Asking $2,000 OBO for whole package (will not separate) - or trade for late model Yaesu FT-990 AC in mint condition with all filters - or ???

Prefer local pickup, will meet within 100 miles - or will ship if necessary...

Thanks,

John
St. Louis, MO

I think they are listing ratings quite a bit less than the US 813.
The plate dissipation is over a 100 watts and they list the output
power as 100 watts. (0.1 KW). Course they may be running class A. I
think the ones I've seen were rated at close to 3000 volts on the
plate and on the order of 250 to 500 watts out depending on class and
duty cycle. I used to run the legal limit with a pair in grounded
grid. (Yup, tetrode in GG <G>). You could darn near read a newspaper
from the light off the plats.

One of the locals just picked up a pair for $10 or $15 each. OTOH that
is about the cheapest I've seen them.

As others have mentioned I'd watch e-bay and see what they are going
for.

I guess they listed most of the differences... In theory, the 520S was the best. The SE was the economy model, and the 520 was the first, and yes, no 160m. I've had and worked on them all. They all work well, but to me, the original 520 had the smoothest audio of the ones I tried. The 530 series was a later digital readout version of this line. The 820 and 830 are also closely related, but each was the top of the line rig at the time they were built. IE: the 820 was top dog at the time the 520's were coming out. The 530 looks nearly the same as an 830, "the 830 came out first", but has a few less toys. The 830 is the best of the bunch hands down as far as the receiver goodies. Also the 830 has true rf speech compression which is very good. I still have a TS-830 and VFO-230. Sold the last 520 about three years ago though..It was a 520 original I bought as a basket case for $100. It had silky smooth audio after I fixed and re-aligned it. Really clean sounding. Probably better than the 830 I have. I had a 520SE in the shack at the same time that I was working on for someone else, and compared the two. The 520 was definitely cleaner as far as audio quality, but I'm not sure why...Both were aligned straight up as per manual as well as could be aligned, "dang near perfect" so it wasn't that. But the older one was cleaner and smoother sounding to my ears. I had a 520S in the late 70's when it was nearly new. At that time, it was like a cadillac compared to the old junk I had been using previous. Really seemed modern at that time... That shows you how far we've some since the late 70's...:/ If I were to buy a hybrid kenwood, just to buy a hybrid kenwood, I'd get a 830. It's the best. "I am biased though..." If not that, a 530. The reason? You can use the ultra stable VFO-230 with those two. Won't work with any of the others..But I guess any of them are ok if you can live with some temp drift. The 520 I had drifted up and down 40 cycles with the ac cycling off and on...That drives me nuts...The VF0-230 doesn't budge. It makes the 830 feel like a 930 as far as stability...:) MK

It is only catalogue value. In my practice a Russian tube is much
"stronger" than an American one because uses the massive graphite anode
vs. tinplate.

>(well it did on mine)

Strange that... I bought a brand new one in New Zealand in 1977 and it
gave 100W output on 160m from the start. Maybe the UK version had the
10W limit factory fitted, I dont know.

I'm surprised you had trouble with the RF choke as I would have
thought the components would have been the same for both power levels,
the power reduction being made by reducing voltages on the PA.

Kenwood TKR-720 VHF-FM Repeater

Purchased new in 1994. One owner. Light duty in Business Band radio service.
Retired from service in 2002 when business switched to cell phones.
Collecting dust in my shop ever since. I have no real use for this repeater because we're on low band.

Cosmetically VERY CLEAN.
Unit works and is totally functional.
Present operating frequencies are (TX) 159.66 MHz and (RX) 150.875 MHz with a 127.3 CTCSS tone.

50 watts RF output. Single channel operation.
Will do up to 8 CTCSS or Digital squelch tones.
Includes 50 watt mobile duplexer installed. Duplexer requires at least a 5 MHz "split".
Includes ComSpec ID-8 morse code ID system and courtesy tone unit installed.
Includes desk microphone for local operation.

This unit is on eBay until April 2

Link:
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=3087808320&ssPageName=ADME:B:LC:US:1

Starting bid is $500. Buy it outright for $1650. This unit cost almost $3000 new and is "gently used" now.

If there are questions, respond to rcallebs (at) oh9 (dot) com.

# 2050. MFJ-434 Voice Keyer and Icom radio question

Newsgroup: rec.radio.amateur.equipment
Date: 2004-03-27 21:53:11 UTC
From: Michael Brown <mabrown@qx.net>
Message-ID: <krWdnXTOZoAuavjdRVn-sw@qx.net>
Source record: 22352

Hello,

I have been thinking about purchasing the MFJ-434 voice keyer to use for contests, Field Day, and I had a few questions for anyone who may own one. I downloaded the manual off of MFJ's web page and it mentioned that you need to set the internal jumpers for the proper voltage for your tranceiver's microphone if you are using any transceiver other than a Yaesu. I recently purchased a used Icom 720A that is currently being repaired by MTS in Washington state. The radio didn't come with the HM-7 hand mic, so I am probably going to have Scott Malcolm at MTS just put together another mic on the radio for me that has a pre-amp built into it that will work with the 720A. I was wondering if anyone knows what the proper voltage is for this microphone? The 434 listed voltage jumpers of something like 0, 2.5, and 5 Volts, but I'm not sure what the proper voltage for my mic would be, or even how to find out exactly. I have a VOM that I can use if I knew what I need to do to determine the mic voltage from the transceiver. Has anyone used the 424 with an Icom rig, or even with 720A, and can you tell me what I need to set the voltage jumper for? Is the 434 a good keyer, given MFJ's reputation, and where is the best place to buy one? I live about a two hour drive from Ten-Tec, so I was thinking about buying one from them in case I had a problem with it and had to return it. Can anyone help me with this one? Thanks for the help!

# 2051. TenTec Omni VI Birdies and Digital Noise

Newsgroup: rec.radio.amateur.equipment
Date: 2004-03-27 23:21:42 UTC
From: davearea51@aol.com
Message-ID: <20040327182142.09636.00000163@mb-m24.aol.com>
Source record: 22353

I've had the OMNI VI for some time. The 10-meter band, especially, is plauged with digital birdies and "chuffs" when tuned much like the Sony 2010. The "chuffing" is up to an S5. In addition, there are many digital birdies throughout the various ham bands that do NOT "dissappear" when an antenna is connected.

I have talked with TenTec several times, and "that's the way that radio is." For what it costs and is supposed to do, is there a "fix" for this problem? Have others had the same or similar problems? If the new Orion has similar problems, all the best receiver technology not withstanding, the radio is not worth considering with this type of performance from TenTec!!!!!!

Suggestions???

Dave - W0LEV

# 2054. Morse Code "@" symbol addition mentioned on CNN Headline News

Newsgroup: rec.radio.amateur.equipment
Date: 2004-03-28 03:18:49 UTC
From: Michael Brown <mabrown@qx.net>
Message-ID: <VMednTM9keCe2fvdRVn-gg@qx.net>
Source record: 22356

Just wondering if anyone else caught the mention on Headline News on Saturday about the addition of the "@" symbol to International Morse Code? They mentioned the ARRL and ham operators who still use Morse Code to communicate and the fact that the "@" symbol allows people to now add their e-mail address when the mcommunicate via code. It was sure neat to see ham ops get a mention on national news.

Dave, W0LEV;
Visit contesting.com and scroll down to Ten-Tec archives, then search
for Omni VI birdie fix.
Also visit qsl.net/n1eu web pages on Omni VI mods.
Altho I own an Omni VI Plus, I am not ready to jump to an Orion for
many reasons. The #564 performs all I need when operating at this
point.
GL,
Jim, K4SQR

Hi,
I have found a few email talking about the Icom IC-40s (not the 40),
which can be 'reprogrammed' to have 99 channels.
Anybody has any details/pointers ?
Thanks, D.

# 2060. Need help: Radio in Car .. couple of problems

Newsgroup: rec.radio.amateur.equipment
Date: 2004-03-28 14:01:58 UTC
From: dante@topblokes.org
Message-ID: <13fff1e1.0403280601.7c73357e@posting.google.com>
Source record: 22362
Cross-posted to: aus.radio.cb,aus.radio.amateur.misc,rec.radio.amateur.equipment,rec.radio.amateur.misc

Hi,
I am beginner .. sorry if some of this seems like stupid question(s):

I have installed a ICom F2010(2020) into my Jeep.
The radio unit itself is installed in the back where the CD changer was, the antenna cable is a bit too long, so it is stored in a loop.
Control unit is seperated with 8 meter cable from main unit and is mounted underneath the ashtray (so basically it is sitting above the gear box).

The antenna is mounted on the roof the car:
A GME 409L (ground independend), mounted on a spring S004

Frequencies used are in the 460Mhz-490Mhz range.

The problems I am experiencing now:
- Whenever the unit is Rx ... I can hear a whisling sound, which is only audible if I accelerate (there seems to be a relationship to the RPMs ?)
- If the car is stationary I can Rx ok, once the car is moving (maybe 50 kmh) the Rx is braking up

Is above normal, if not .. any ideas how to fix it ?

I am aware that I should shorten the antenna cable, rather than looping it.
Could the transmition be causing the whisling noises ?
Is the antenna I am using a piece of s(*^&(^ and should I use a different one ?
Thanks, D.

Sounds a lot like 'alternator whine'. Is your radio hooked directly
to the battery, if not then proceed to make it so (and fuse both
positive and negative leads). If that does nothing, or not enough, to
fix the problem you may wish to consider a DC noise filter. RatShack
carries a couple of them, the 10 amp model is about $16 (pn 270-051).

A NEW MORSE CHARACTER -- To keep up with the times, the IARU has proposed adding a new character--the commercial "at" or @ symbol--to permit sending e-mail addresses in Morse code. The draft new recommendation proposes using the letters A and C run together (.--.-.) to represent the @ symbol. Tis pending approval.

I'm trying to locate an emergemcy source of power to operate my 2meter base rig in the event of a power outage. My HTX-242 manual states the current drain of the transmitter as 8A @ 45W and 4A @ 10W. Would a 17aH jump start battery work? Or is there something better, yet not to costly?

# 2065. Portable QRP project for blind ham living in apartment.

Newsgroup: rec.radio.amateur.equipment
Date: 2004-03-28 16:13:52 UTC
From: Darrell Shandrow <nu7i@azboss.net>
Message-ID: <MPG.1ad0abfe31832bf4989683@news.azboss.net>
Source record: 22367

Portable QRP Project

The purpose of this project is to research, then implement a portable ham station that can be operated by a blind person from an apartment and from other portable locations using either battery power for Field Day and other portable situations or a power supply for primary home operation. There are several ultimate goals as follows:

1. Operate from an apartment with little or no evidence that there's a ham station.
2. Operate the ARRL Field Day contest event and in other portable situations such as another person's house, amateur radio demonstration site or outside the office building at work.

Antennas

The antenna must be stealth or nearly stealth. It must also be usable by a blind person with no special test equipment available and little or no available sighted assistance. This means there must be no tuning requirements that require sight to adjust the antenna or read an SWR meter. Though sufficient performance is required to actually make contacts (we're not looking for a dummy-load here) any and all performance compromises are acceptable to reach the results described in this paragraph.

Radios and Power Requirements

The rig must be QRP to prevent unnecessary RFI and to minimize power consumption during portable operation such as Field Day. An inability to completely use all functions of the radio by a blind person is acceptable, so long as the basics of changing frequencies, listening and transmitting are possible without the need for computer control of the rig. If only basics are possible, an accessible computer control option must be available for fuller operation in a less portable situation.

The following are the goals for the radio and power requirements:
" Extremely portable light-weight radio. Should easily fit in a backpack. Radio will likely be transported on public transportation such as a city bus or carried by way of walking since blind people can't drive automobiles.
" Basic operations of the radio, including QSY, listening and transmitting must be possible without sighted assistance. Full configuration and operation of the radio must be possible with accessible computer control when the radio is not being used in a portable situation.

" Extremely portable, , safe and easy to implement battery power is required. No car batteries or other possible dangers or items that require sighted assistance to set up and maintain. Prefer battery power solution be provided with the radio or as a recognized accessory for the radio within the ham community. Potential miswiring of positive and negative terminals prevent any experimentation; it must be widely known to work out of the box by being connected to the radio.

The only "stupid" question is the one you never ask.

> Frequencies used are in the 460Mhz-490Mhz range.

Since the 2010/2020 series are FCC Part 90 type accepted, this is
a good match.

> The problems I am experiencing now:
> - Whenever the unit is Rx ... I can hear a whisling sound, which is
> only audible if I accelerate (there seems to be a relationship to the
> RPMs ?)

Alternator whine. Very common. You need to check that all your
radio and antenna ground connections are clean and solid, that the body
of the car is well-bonded (electrically speaking) to the engine block,
and hence to the negative battery termimal, AND you should purchase and
install an alternator whine filter.

> - If the car is stationary I can Rx ok, once the car is moving (maybe
> 50 kmh) the Rx is braking up

That's "breaking," BTW. Possible antenna problems. You should
check the forward and reflected power with a good-quality thruline RF
wattmeter, such as a Bird 43 series or a Telewave.

Also, the antenna's outer shell conductor may not be well grounded
to the frame of the vehicle.

If any or all of the above sounds unfamiliar or overly complex, I
would strongly recommend that you seek professional assistance from
whatever amateur radio club or two-way radio shop is local to your area.
You cannot properly troubleshoot things like antenna problems without
the proper test equipment.

> Is above normal, if not .. any ideas how to fix it ?
>
> I am aware that I should shorten the antenna cable, rather than
> looping it.

Antenna cables should be cut to length unless the manufacturer of
the antenna explicitly states otherwise in their printed instructions

(which should have been included with the antenna).

> Could the transmition be causing the whisling noises ?

No. That's "transmission," BTW.

> Is the antenna I am using a piece of s(*^&(^ and should I use a
> different one ?

No idea. Antennas are pretty simple devices. If the one you have
is built for the frequency range you're using, I don't see why it would
not work if it was properly installed.

Yes it will. It is a nice package for the battery, and has many other
uses as well.

If you do the math, you will get close to two days operation on a
5/5/90 duty cycle.

However, you may wish to add something like an Anderson PowerPole
connector, as the ciggy lighter outlet and plug may not be happy with
the 10 Amp draw (rounding up a little for good luck).

Happy trails,

This transceiver is being used for voice, right?

Figure worst case you'll be transmitting 20 percent of the time at 45 Watts, receiving (with squelch open) 75 percent of the time, and in standby (with squelch closed) 5 percent. Standby current is 0.5 A; let's assume receive current as 1.2 A. At 45 Watts, your average transmit current will be 0.2*8, or 1.6 A. Your average receive current will be 1.2*.75, or 0.9 A. Your average standby current will be 0.5*0.05, or 0.025 A. Add them all up, and you get 2.525 Amps as an average. This is approximately 5.5 hours from your prototypical 17 AH "jump start battery", based on the most common rate for calculation AH capacity being one that discharges the battery over 20 hours and the fact that your average current draw is a little more than three times that rate. The figure of 5.5 hours does include a fudge factor as well.

Best case (you're not NCS, just calling in and responding when NCS calls you), figure 10 percent transmit at 10 Watts, 10 percent receive, and 80 percent standby. Your average transmit current becomes 0.1*4, or 0.4. Your average receive current becomes 0.1*1.2, or 0.12. Your average standby current becomes 0.5*0.8, or 0.4. Average current is now 0.4 + 0.12 + 0.4, or 0.92 Amps. A straight-line approximation shows a discharge time of 18.48 hours under this load. You could reasonably expect 18 hours under this best-case scenario.

<disclaimer>
If this is a critical application you might want to consult with someone who does these calculations for profit. I just do them for fun.
</disclaimer>

Bottom line is if you expect power to be out more than 5.5 hours and to impose heavy loads on your backup battery then you'll need either more battery or a photovoltaic system to help keep it topped up under load, while if you expect power to be out less than 18 hours and to impose only light loads on your backup battery then your 17 AH jump start battery should be adequate.

D-

My guess is that the whistle is alternator whine, as others have suggested. If so, it is probably not coming in through the antenna, but through the power connection to the audio amplifier.

I would suggest using a pair of 10 AWG wires directly from the battery terminals to the main unit (Fused, of course). Either alternator or ignition noise might be coupled through the control unit's ground, so try isolating it. Let it obtain audio, power and ground through the 8 meter cable.

If the antenna is ground independent, make sure you didn't ground it by accident. There could be noise conducted through its shield back to the radio.

<< Potential miswiring of positive and
negative terminals prevent any experimentation; it must be widely known
to work out of the box by being connected to the radio. >>

Darrell-

Perhaps the 120 VAC plugs are sufficiently standard, but radios powered from a separate DC source usually come with a cable that could easily be connected backwards. The only way I know for equipment to work out of the box on battery power, with no chance of being misconnected to the power supply, is for it to come with something like the Anderson PowerPole connector system. The power source must be set up with it as well. I understand one model of Yaesu does come with PowerPoles, but it may not meet your other needs.

There is a small Yaesu radio, as well as the Icom 703, that may meet most of your needs. Whatever you decide, I believe it will require some help to set things up.

For a custom system for blind Hams, you might contact MFJ and see if they are interested in producing something that matches your requirements. I think they currently produce most of the items needed, just not set up in a "blind-proof" package.

I'd be interested to hear peoples' thoughts on what constitutes a
2-meter emergency during a power outage.
In winter, I'm most concerned about the gas heat not working and the
pipes freezing. Conversely, in summer, I worry about the freezer
thawing. Being able to talk to the same two guys I talk to every day
on 2-meters is NOT a priority. A power outage is a great time for a
nap...maybe even with the old lady...

If you don't already have a rig in the car, it's not too hard to set up
so you can throw it in the car in such an emergency.

A handheld can also serve the emergency needs...and can serve to satisfy
your 2-meter Jones while walking or shopping or whatever else takes you
away from the rig.

The biggest problem with the portable battery station is that you don't
use it...it goes flat...sulphates...and can't hold a charge when you
need it. I charge mine on a regular schedule and it still goes flat...

As a member of the county emergency services, the problem starts
when the power goes out.

>Being able to talk to the same two guys I talk to every day
>on 2-meters is NOT a priority.

It is when the "same two guys" are the County Emergency
Manager and the County Communications Officer that such a
facility is necessary.

>A power outage is a great time for a nap...maybe even with the old lady...

I don't need a power outage for that.... <ggg>

>The biggest problem with the portable battery station is that you don't
>use it...it goes flat...sulphates...and can't hold a charge when you
>need it. I charge mine on a regular schedule and it still goes flat...

My station power supply is a Size 31 100 AH Marine Deep Cycle
Gel-Cell battery with continuous float charge (13.5 V) by dual AC
supplies and suitable diode isolation. All equipment runs on 12V,
and all wiring and distribution devices are UL and USCG marine
approved. Gel-cells don't go flat when float-charged and the usual
battery life is about 5 years.

Steady-state (receive-only) draw is 5A (then again I have 3
transceivers, 6 receivers, and 4 TNCs on-line 24/7.

Contrary to what an earlier poster said, such a setup will not
power the station for the number of hours determined by the AH
rating divided by the steady-state load (in my case 100/5 or 20
hours). After about 6 hours, the no-charge battery bus voltage
will drop to about 11.3 volts at which point several 12 V devices
fail to operate and go off-line. That's what standby generators
are for.

The concern is not about talking with your buddies on 2M, but for
those who are involved in various emergency communications functions,
including their local Emergency Ops Center, their state's emergency
operations, ARES, MARS, SATERN, Red Cross, etc.

Many hams are involved with these efforts, and many times in natural
(hurricanes) or not so natural (WTC) disasters have been the only
reliable source of communications.

Happy trails,
Gary (net.yogi.bear)

Where are you getting the power from? The battery direct, or from a
receptacle?
Sounds like you are getting alternator whine, or ignition noise.
Probably alternator. You can try directly hooking the power direct to
the battery. Both positive and negative wires, "use both + and - fuses
at the battery". Or go to rat shack and buy a noise filter. I think
they still sell them. It's possible to need the filter even with a
direct battery connection in some cases I bet. MK

Any official dealer should have the software. Unless you are licensed
for extra freqs, most will not program transmit freqs....just receive.
Like police UHF.

brianWE
Please ignore any advice I offer...

What you're hearing is alternator whine. I'm curious how you hooked up
the power leads. If you did the one through the fuse panel, another to
ground you're going to get noise.

The way you should install amateur radio gear is a positive and negative
lead connected to the battery, being sure to put suitable fuses on both.

I've used this method on half a dozen vehicles over time and never had a
problem. But it's very important to fuse both leads.

OK, I can see the need for a handheld or mobile to go rescue someone.
Seems like there would be limited need for a fixed isolated station.
You can have only so many coordinators...and they usually end up in the
sheriff's office on a generator. And those people know about emergency
power.

I used to do communication for hurricaine shelters back in the '60s.
Was mostly a waste of time. I don't remember anyone ever NEEDING
communication to/from a fixed shelter.

I like the old radios...:) All those older hybrid kenwoods will go down as some of the best ham rigs ever made. Real reliable workhorses, and the audio quality was real good. I mentioned the audio on the original 520... I've heard stories that when they first designed the 520, and maybe some of the other first kenwoods, they actually borrowed the same audio engineers that designed the high end stereo stuff to design the audio circuits on those radios. May explain why I thought that first model sounded so good. They may have "dumbed" it down a bit on later versions due to circuit changes...Who knows...Kenwood has made a lot of good radios. The 430 is another reliable workhorse that will enter the same museum...:) Of course, it was one of the first all solid state. "The 180 was the first I think". The 930 and 940 were super radios in my opinion. But some had some problems that show up in later years, that is hard to fix without parts. The 930 had a common problem with the power supply solder joints, or something along that line...Cliff could probably better fill you in on those...But when a 930 or 940 is working right, it's hard to beat for an all around radio. A friend of mine had a 930 when it was fairly new. It always worked perfectly then of course...I always thought it was one of the best all around radios I ever used. The 940 good too. Better in theory, but either is good. Like Cliff mentioned, many of the older radios use parts that are getting hard to get. Luckily, for the hybrids , it's mainly the relays, etc..There are mods you can do to extend the life of them. I've got a nice icom 730 that is collecting dust, because I can't find one lousy 9 pin transformer for the display board. I'll have to raid a junker some day to fix it...The IC-730 was one of icoms better 1980's radios...:) Really solid. The 735 was good too. I bought a 706mk2g to replace the 730 after I couldn't get the part...So far after three years, it's been good. Knock on wood...But I'll fix the 730 some day. ...Great easy to use mobile rig...Mines got the desirable passband tuning filter in it. The 730 has a quad conversion receiver, believe it or not...It's pretty good. MK

Like when a hurricane breezes through town and takes all the light
poles with it. In many parts of town, the lights can be out for DAYS,
not hours. I done seen it firsthand in 1983 with Alicia. Luckily, it
wasn't ours though. :/ Ours stayed on. But the people across the
street were on a different circuit, and their's was off for a long
time. The guy I work with is two blocks away, and his lights were off
for a week or two.

> If you don't already have a rig in the car, it's not too hard to set up
> so you can throw it in the car in such an emergency.

I have that too. In Alicia, I actually rode out the hurricane sitting
in the car, not in the house. It was fun watching all the power lines
short together in the wind, and then in turn, blow up the transformers
that fed them. They would glow a weird greenish color. The whole sky
looked like that from them constantly blowing all over the area.

> A handheld can also serve the emergency needs...and can serve to satisfy
> your 2-meter Jones while walking or shopping or whatever else takes you
> away from the rig.

I have that too. That way I'm covered when sitting on the pot...

> The biggest problem with the portable battery station is that you don't
> use it...it goes flat...sulphates...and can't hold a charge when you
> need it. I charge mine on a regular schedule and it still goes flat...

I have battery power in the shack at all times. Have for nearly 15
years. I have a 706 that runs off battery power all the time. Except

I use big batteries. At least a full size car battery, and preferably a deep cycle. 17 AH? That wouldn't last me doodley on the 20 amp max 706...I use 100 AH plus batteries. The charger is fully automatic, so thats not a concern. One plus to my bigger batteries is I also have an inverter. So I can run a light bulb, and a TV, whatever if I want to. I've had to do this quite a few times when the lights have gone out. Sometimes, it's taken a few hours to get them back on. If I eventually had to recharge a battery during a lights out, I can either swap with the car, or I can also just take it out and plug it into the car via the radio power cable. I use anderson power connectors on everything 12v. Any connector will plug into any other.

It depends on the area, but having battery power is just plain good sense in Houston Texas. You'll eventually use it. As far as emergencies, I'm covered from just about every angle you can think of...We are due another big storm. Houston is so built up, a hurricane just rips it to shreds. If we ever get a storm that is 150 mph, Houston will be totaled. I'm talking big time. Alica just about ruinated it, and it was a wimpy 105 mph job...It did roll right down main street though...Made a heapum big mess. I look at old pix of the damage and it's amazing. Trees blown down right and left. Our whole street was covered in blown down trees and tree branches. MK

Even if the radio only draws 10 amps on transmit, I'de get the 20 amp
filter. You'll have less voltage loss that way.

I had the same problem but with a PRM8010,
On Transmit you could hear an alternator noise, so all i need is a noise
filter?
Where abouts can i get one and how much??

Jimmy,
just picked one up from SuperCheapAuto (or something like that) ... there is
one for AUD 10 and one for AUD 30.

Will put it in tomorrow and see how it goes

D.

Dr.,
thanks ...
alternator whine ... makes sense ... I split of the + from an accessory outlet in the boot (yes .. the cables are rated with enough AMPs), which comes from the fuse box ... picked up a noise filter today .. will put it in tomorrow ... sure it will work

grounding .. just double checked everything .. seems to be ok .. I think the only way to achieve a better grounding would be to put a cable directly to the engine block, rather through the frame ;-)

regards the 'breaking' .. it only happens with certain TXs, not all do the 'breaking-thingy' (hope that is the correct technical term)

professional assistance .. nah .. don't think so .. this is a hobby .. so I shall learn and learn and learn until I know and can do it myself

spell-checking .. if you can get me the partnumber I order a spell-checker with ICom .. called them today to order one.. they asked me to spell spellchecker .. but I didn't have a spell-checker-speller .. so .. need your assistance here .. thx

Thanks,
D.

The H-16 is programmed from it's own fromt panel or cloned from
another H-16. The V-200 is only cloned from a H-16.
Icom never produced any software method for programming either of
these two radios.

## 2095. Wanted: Tempo VHF/One manual

Newsgroup: rec.radio.amateur.equipment
Date: 2004-03-29 14:04:27 UTC
From: k5dh@raytheon.com
Message-ID: <L1W9c.2$Hs.1@dfw-service2.ext.ray.com>
Source record: 22397
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment

Anyone have a manual for a Tempo VHF/One? I'll pay reasonable copying and postage costs. Any chance I can borrow it and copy it myself?

(yes, I'm aware of the many on-line vendors who sell this manual; they want more for the manual than I paid for the radio!)

Dean K5DH

# 2096. Need help with Tempo VHF/One

Newsgroup: rec.radio.amateur.equipment
Date: 2004-03-29 14:08:44 UTC
From: k5dh@raytheon.com
Message-ID: <M5W9c.3$Hs.1@dfw-service2.ext.ray.com>
Source record: 22298

Until I can get a manual and schematic...

The rig is a $10 hamfest item. At least the guy
who sold it to me was honest in his description!

The rig is stuck in transmit mode with or without
a mic plugged in. I popped the hood and looked
for obvious problems (shorted wires at the mic
jack, etc) but found nothing. No sign of burnt
or broken components. Any suggestions on where
to start looking for the problem? Dang, I wish
I had a schematic...

73,
Dean K5DH

# 2097. Re: Portable QRP project for blind ham living in apartment.

Newsgroup: rec.radio.amateur.equipment
Date: 2004-03-29 14:32:15 UTC
From: Mikey <ki6pr@arrl.net>

Source record: 22299
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.antenna

Without a doubt - Elecraft's KX-1. The rig is designed from the frame up as totally operable by totally blind operators. The rig covers 20/30/40 meters with extended receive. It has a built-in keyer, and automatic antenna tuner. Antenna connector is BNC (I have a small dipole fed with RG-174 that works well with this rig). The rig also features a complete DSP system, and totally audible feedback on every feature.

The rig is small enough to fit in a shirt pocket, and runs 1.5 W on the internal alkaline pack, or 4 W on an external supply.

Check their website for details.

Hi all,
I got my hands on a Diamond CP5 vertical, but it's all in bits and
pieces ;-) I need a copy of the assembly instructions.

Anyone knows where to find it, is there a pdf on the net somewhere?
Maybe you have a papercopy that you can scan or fax to me?

cheers,
Hans / SM0IMJ

>jump start battery work? Or is there something better, yet not to costly?

Automotive starting batteries are designed to deliver one huge slug of
electrons over a short period of time. They don't do so well at delivering
a low amount of power over a long time.

Me, I scrounge old SLA (Sealed Lead Acid)or gel-cel mat (forget the
acronym) computer UPS batteries, recharge them and test them under heavy
load. If the voltage drop is <5%, I keep them or pass them on to friends;
otherwise, take them to a battery dealer for the $1 (or more) core charge I
get back.

I don't have an automated charging system, and instead use a trickle
charger from Wal-Mart said to have some degree of intelligence. It cost me
$18.

I charge up the batteries, test them under load and without, and log the
result. I also run each on rotation for the weekly ARES nets, so I can
report "operating on emergency power', which gets me off the net quickest
and also encourages other hams to be self-reliant.

What a bunch of wussies.
You ain't lived till you've been thru a hurricaine in Port Arthur.
Two blocks from the Gulf of Mexico and two feet below sea level.
That big battery had better be in the attic...and in a box to protect it
when the roof blows off.

And still, I don't think I ever handled any IMPORTANT traffic.
I'll waive
the public service banner if it helps keep the spectrum, but I don't
believe it.
I'll wager that 90% of the people with battery backup are of no value
in an emergency...not cause they're not motivated or stupid...it's that
there's nothing for them to do as long as they're fixed in one spot.
If you want to be helpful, put your rig in your vehicle...or your boat
if you live near the coast. Or put your repeater up high and put a
generator on it.

Source record: 22309

Hi folks:

Looking for info on the 228H backup battery. I don't have the service manual and wonder if someone does and could comment on what the battery # is and its location. (The good news is that this is not one of the Icoms that lose its config when it dies, just the memories!)

Is is located on the front pcb somewhere? I didn't see it after a really quick peek inside.

Any info would be appreciated.

Thanks,

Kelly, NN8E

# 2109. Omni Antenna Advice please?

Newsgroup: rec.radio.amateur.equipment
Date: 2004-03-29 22:30:04 UTC
From: Bob <nubob5001@yahoo.com>
Message-ID: <KC1ac.10074$R37.6827@read1.cgocable.net>
Source record: 22311

Hi

I was given a Omni antenna from a ham who claims the best thing since sliced cheese. I want to use it for receive at first and when licenses come in for transmit. I would like to transmit on as many frequencies as practical and possible as I have a good tuner.
This is an omni, aluminum, telescopic and it 19 feet long. It has 4 ground planes about 8 feet long.
As I was cleaning it up, I noticed a coil at the base of the antenna connecting ground to center. Right at the female connector within the base of the antenna. There is a coil that has approx 20 windings and connects to ground. The center also feeds to the piping that stretches the full 19 feet. The coil is pretty rough shape.
My question is in regards to this coil. Is it necessary? What function will it serve? I can rebuild it if need be but is that necessary? And is 19 feet a good length for utilizing as many useable frequencies as possible?
Any advice?
Thanks
Bob

I remember it being on the inside of the front panel. You remove the 4 screws that hold the front panel to the main body. The look inside of the front panel and you should see the battery. Its soldered into place. You will loose the memory channel programming. Its not a bad idea to do a CPU reset after messing around with the logic unit.

While I think (hope) his intentions are honorable
I for one will be hesitant to donate any gear to any
so called 'ham' charity for a tax write off.

A ham club I was a member of once did this
"tax write off donation" thing a year or two
ago and only one-quarter of the donated radio
gear (from 3 estates) were kept for the club.

The rest of the gear was pared-off between
Club Officers and Directors, who then mostly sold
it on e-Bay and a significant personal profit or
quietly kept it for their home/personal use.

Moral of the story: Tell the XYL that your ham gear
is not to be donated to a club after you go SK.
The many vultures will likely try and grab and
profit from it. Have a trusted ham sell it for fair
profit to the estate, or box it up in taped-up sealed
non-descript cardboard boxes and put em outside on the curb
the morning of trash day so the bastards won't scavenge
it either. (I've seen some bastard hams actually drive by
homes of recent SK's on successive trash nights hoping
the XYL would put the radios out on the curb)

When they knock on the door askin if they would like to
"part with" that old "radio junk", tell em the trash man
took it last week and it sounded and felt REAL NICE
when the hydraulic jaws of that trash truck crushed and
smashed that Yaesu and Henry to SCRAP IRON out
in the street a little earlier.....(trust me, I did this once
to a ham vulture whom I knew would knock on the
door of the XYL of some SK ham I knew. The look on their
face of the guy was ***absolutly priceless**** when
she told them, as I coached her to do, that the big amplifier
he wanted for $50 was crunched in the back of the
trash truck a few hours earlier....)

# 2112. Needed: KW TM732 Service Manual

Newsgroup: rec.radio.amateur.equipment
Date: 2004-03-30 04:01:21 UTC
From: PD <w4pd@arrl.net>
Message-ID: <li6ac.36277$tY6.1065389@bgtnsc04-news.ops.worldnet.att.net>
Source record: 22314

Anyone have one they would like to get rid of?

My 732 is generating RF but not mixing audio with the carrier on either band. I have verified mic function, antenna, etc. The problem is internal to the rig. Helpful hints are appreciated and a service manual would be really cool.

Tnx for reading. Direct replies are great at w4pd(at)arrl(dot)net

Correct. Looks like a tabbed 3-volt lithium coin cell. I can't read
the ID number.

> You remove the 4
>screws that hold the front panel to the main body. The look inside of
>the front panel and you should see the battery. Its soldered into

You'll probably have to unplug a half-dozen cables between the front
panel PCB and the main board, in order to gain enough access to the
battery to remove it. Make sure you write down the locations and
orientations!

# 2115. Yaesu FRG-7 Frequency Range Questions

Newsgroup: rec.radio.amateur.equipment
Date: 2004-03-30 06:06:00 UTC
From: Barry Carlton <barry@doesnt.want.any.spam.today>
Message-ID: <40690e3d$0$15065$afc38c87@news.optusnet.com.au>
Source record: 22317

I originally posted this over in rec.radio.shortwave but didn't get any response - hopefully someone here will be able to help.

My Yaesu FRG-7 happily locks to the 30 and 31 Mhz ranges in the positions to the left of 29 Mhz on the dial. (All ranges from 0-29 Mhz work just fine)

From a brief test, it appears the receiver is quite capable of tuning from 30-30.99 Mhz. Sensitivity appears to be less than in the plated frequency range
(presumably some attenuation by preselector and the band pass filter for band "D") but still quite usable.

So here are my questions,

Is this normal behaviour for an FRG-7, or does it indicate a problem ?

Would the long-term use of this "extra" receiving range have the potential to cause problems for the receiver ?

# 2116. Re: Emergency power source

Newsgroup: rec.radio.amateur.equipment

Source record: 22318

Bill, if you are talking about the 12v booster packs, the ones that have a pair of jumper cable ends plus at least one cig. lighter-type outlet, these contain gel cell batteries, and work very well as emergency power supplies for your 2m radio, particularly if you operate it at the low power setting. Two years ago, when an ice storm trashed the city's utility lines in a small city near me, a ham I know there operated his 2m/70cm radio from one of these every evening for over a week. Every couple of days he would take the pack with him to work and recharge it. Then it would be good for a couple more evenings of operation. Go for it!

Hello, All!

My 40 Amp switchmode PSU blew up yesterday (for no obvious reason). It is a Watson WS-40SWV but I suspect it is just "Badged" as a Watson so the PCB number is 4520-8400-0012. Anyone who has one, care to tell me what "U2" is immediately left of transformer marked 9402 - I can't tell because it has been blown to bits. It looks like a voltage regulator (no heat sink) and it's in the HT part of the board.

With best regards, Gareth (G1LVN).

Source record: 22321

Hi,

http://va-ares.org/

Virginia RACES has a wealth of information on their web site
for operation during emergencies. Check the reference library section.

Info also includes battery operations and EMCOM training information
that you can download and learn all at no cost to you !

As for the other operator who claimed his emcom work at a shelter
was a waste of time, well, that is a good thing because there were no
emergencies at that location. If a person at the shelter require medical
care, he could have passed this on to the net control or other station.

I agree, most of us are not trained or need to update our skills.
The above link has this information and it is good reading.

In 1996 we had the bad storm hit us hard here in Raleigh NC
and I admit I was not prepared. Had no idea that storm would hit
us as we are three hours from the coast. Boy, was I wrong !
We had no power for 9 days and I live within the city !
Others out in the country had no power for weeks.

Be safe and enjoy the information.

carol

Hello Paul,

Sorry to hear you had so much trouble with prior donations to other groups.
I too have seen the SK feeding frenzy you describe.

My ARES/RACES/Skywarn crew are not vultures.

Anything donated that works will go into the motorhome or if not practical
will be used to build up battery powered field units or if AC only used in
our Net Control Radio room.

Anything that is totally not useable by my group will be offered to
surrounding ARES groups.

Like so many other public service amateur radio groups we lack significant
corporate or government financial sponsorship.

I'm trying to pull the group out of the 1980's and at least into the late
1990's.

If not practical to donate to my group please consider looking around your
immediate area for a worthy group.

Thanks,
Steve

Surrrrrrrrrrrrre, and we all all believe the Easter bunny is about to
arrive too! As one poster noted, I've seen more of these "so called"
charity donations end up in the private shacks of the guys running
the "so called" charity drive and/or being sold for cash.
Go sling your *bullshit* some place where people will be stupid
enough to believe it.

Hi all,

I'm going to sell or trade my Icom 756 Pro II. Radio is in immaculate condition and comes with the matching Speaker and Power Supply - all boxes, manuals, accessories bags, etc...

Radio is about a year old and has seen very little use - primarily used for SWL'ing and kept covered when idle. There are no problems - it's just way too much radio for my needs...

Asking $2,000 OBO - Cash - Money Order - Paypal (confirmed account only) - Personal Check (requires 10 days clearance). Selling whole package, will not separate. May trade for late model Yaesu FT-990 AC in Mint condition with all filters plus cash - or similar...

Prefer local pickup - will meet within 100 miles - or will discuss shipping if necessary.

Thanks,

John

I have no idea if it's "normal" but I wouldn't see it as unexpected. We're talking about an analog system, and there was usually some extra range just in case. If they designed it for an absolutely fixed range, there was always the risk that something would drift out of spec and drag the receiver down with it.

That tuning for the segments is an oscilator above 30MHz that has a 30MHz range. YOu want some leeway when designing such an oscillator, and the fact that it can lock an extra step is just icing on the cake. If the specs allowed for that extra range, and some receivers didn't cover it, then people could complain. But it's not, so you feel you've received a bonus.

I dont' know what the front end tuning is like, but I'm a tad surprised you see a drop in sensitivity. I would have thought there'd be enough leeway there to be able to peak it. If it's not properly peaking, one might risk receiving spurious responses, depending on factors.

I can't see any reason why using the extra range would hurt anything.

# 2133. ICOM IC-251E Frecuency Range Expanded

Newsgroup: rec.radio.amateur.equipment
Date: 2004-03-30 17:59:40 UTC
From: Edward <efemtz@mundo-r.com>
Message-ID: <c4cci5$jcr69@cesio.mundo-r.com>
Source record: 22335

Hello

Is it posible to expand the frecuency limits?.
How
Thanks
Edward

# 2137. Re: MFJ-434 Voice Keyer and Icom radio question

Newsgroup: rec.radio.amateur.equipment
Date: 2004-03-30 20:19:48 UTC
From: KA9CAR <ka9car@a_r_r_l_.net>
Message-ID: <c4ckp6$1ief$1@news1.tribune.com>
Source record: 22339

The jumper sets the voltage level put on the audio line. I use it to run an electret (not icom) microphone.

I think some Icom depend on that voltage while some take the power from a different line, which the MFJ will be feeding through direct from the radio.

The only Icom I ever checked had about 8 volts on the audio line.

You won't hurt the mic with too little voltage, it will just be low in level.

I find my Non Icom mic works fine at 3 or 5 volts, and some work on the 1.5.

The open circuit voltage will be different than the voltage with a microphone connected, as the mic draws some current which will give you a voltage drop.

F/S IC-W32A 5 watt HT. Radio is in nice condition. It
comes with Manual, Rubber Duck Antenna, Cigarette Lighter
DC Power Cord, Speaker/Mic,Rapid Charger that charges
both NiCAD and Ni-MH and 9.6 volt battery(BP-173)
Only blemish is paint is worn off where D-ring for
hand strap has rubbed against case. Keypad is perfect.
Pictures on request. $200.00 shipped CONUS. Payment by
US Postal Money Order, Bank Check or PayPal.

## 2139. FT-767Gx & Mc-80

Newsgroup: rec.radio.amateur.equipment
Date: 2004-03-30 21:21:22 UTC
From: Rescator <suispasla@free.fr>
Message-ID: <4069e4c4$0$13358$626a14ce@news.free.fr>
Source record: 22341

Somebody would have he made a success has to put on up and down of chanels as well as the PTT on FT-767gx and MC-80 kenwood?.
The problem is that the GND PTT is connected with the common of " up and down" chanels on it mc-80, while apparently on it ft-767gx the common of " up and down" canals is different.
thanks

I have the following items for sale. Prices do not include shipping. I will ship overseas.

Conar Model 500 Receiver.....$100 plus shipping
A very clean,working Conar 500 receiver with photocopy of manual
http://members.cox.net/radiostuff9/conar_rcvr.jpg
http://members.cox.net/radiostuff9/conar_rcvr2.jpg
http://members.cox.net/radiostuff9/conar_rcvr3.jpg
http://members.cox.net/radiostuff9/conar_rcvr4.jpg

Electrovoice Model 623 Microphone - New in box.....$135 plus shipping
This is a Hi-Z dynamic mike with instructions and cable.
http://members.cox.net/radiostuff9/ev623_mike2.jpg
http://members.cox.net/radiostuff9/ev623_mike.jpg
http://members.cox.net/radiostuff9/ev623_mike3.jpg
http://members.cox.net/radiostuff9/ev623_mike4.jpg

Eico 249 VTVM.....$35 plus shipping
Nice working unit with a nice large easy to read meter. Meter has a small crack on the lower left side and their is a scuff across the meter face. No probes but has a connector so you can build your own. Includes a photocopy of the manual
http://members.cox.net/radiostuff9/eico249.jpg

Weston Model 904 Precision AC Voltmeter....$40 plus shipping
This meter measures 0-750 volts and the ranges are changed by making the appropriate connections on the top of the meter. The ranges are: 3, 7.5, 15, 30, 75, 150, 300 and 750 volts. This is a working unit in excellent condition.
http://members.cox.net/radiostuff9/ac_voltmeter.jpg
http://members.cox.net/radiostuff9/ac_voltmeter2.jpg

Westinghouse AC Voltmeter.....$35 plus shipping
This meter in a heavy bakelite measures 0-150 volts and the ranges are changed by making the appropriate connections to the meter. The ranges are: 1, 5, 15 and 150 volts. This is a working unit in nice condition.
http://members.cox.net/radiostuff9 west_meter2.jpg
http://members.cox.net/radiostuff9 west_meter.jpg

Precision Apparatus Series 85 VOM.....$25 plus shipping
Vintage well built VOM. Tested and working.
http://members.cox.net/radiostuff9/series852.jpg
http://members.cox.net/radiostuff9/series85.jpg

Knight Kit Audio Amplifier.....$30 plus shipping
Knight Kit amplifier from Allied Radio. No model number on the unit. I believe this unit is from the late 1950's or early 1960's. I have checked it out and it works. I had the matching tuner for this a year ago and it too did not have a model number.
http://members.cox.net/radiostuff9/knight_amp.jpg
http://members.cox.net/radiostuff9/knight_amp2.jpg

McMurdo Silver Model 900 VOMAX VTVMwith RF probe...$25 plus shipping
This is from the 1940's and an interesting piece if you collect McMurdo Silver equipment. Includes a copy of the manual. This unit is untested.
http://members.cox.net/radiostuff9/silver_vomax.jpg

Thanks for looking.

# 2144. Re: Omni Antenna Advice please?

Newsgroup: rec.radio.amateur.equipment
Date: 2004-03-31 20:33:03 UTC
From: Richard G Amirault <amirault@shell01.TheWorld.com>
Message-ID: <c4f9tv$akt$3@pcls4.std.com>
Source record: 22346

That antenna needs the coil. That antenna is specifically designed (I would guess) for a specific frequency (more like a band .. say 2 meters) You will not likely be able to use it to transmit on bands that it was not designed to transmit on (6 meters, 440, 220, 80meters and so on)

The closest thing I know of for a omni-directional multi band UHF/VHF antenna is the DISCONE type of antenna (Radio Shack sells one, Diamond sells a very nice one as well)

Richard in Boston, MA, USA

# 2145. Re: Omni Antenna Advice please?

Newsgroup: rec.radio.amateur.equipment
Date: 2004-03-31 23:17:46 UTC
From: Ed G <Spectrumhog_REMOVE_@Starband.net>
Message-ID: <Xns94BD9BEF8623CSpectrumhogStarbandn@63.223.5.248>
Source record: 22347

As Richard suggested, I'd recommend a discone antenna for multi-band VHF/UHF operation, although you can purchase other types that will provide better performance on 2M and the 440 ham bands. That antenna you have sounds, to me, like a CB antenna and probably is not appropriate for anything except possibly the 10M ham band.

Ed WB6SAT

# 2146. low power 88-108 MHz retransmitter

Newsgroup: rec.radio.amateur.equipment
Date: 2004-03-31 23:36:57 UTC
From: Robert Haston <rehaston@earthlink.net>
Message-ID: <tCIac.6060$NL4.1631@newsread3.news.atl.earthlink.net>
Source record: 22198

25 of us work in a metal building and only receive 1 clear station. I have a great outdoor antenna. I could get a cable boost system and run coax to everyone's radios, but I would like to instead boost it up to 110 mW or so and run it into an indoor antenna.

I have found amps that do this to boost cable signals for splitting, but I cannot find one a little more powerful to feed an antenna.

Any ideas?

# 2147. NEW PROGRAM - Input Impedance & SWR of resonant antenna

Newsgroup: rec.radio.amateur.equipment
Date: 2004-04-01 00:01:13 UTC
From: Reg Edwards <g4fgq.regp@ZZZbtinternet.com>
Message-ID: <c4fm48$lop$1@titan.btinternet.com>
Source record: 22199

Program models a 1/4-wave vertical and 1/2-wave dipole antenna to
demonstrate how input impedance and SWR behave in the vicinity of resonance.

Transmission line Zo can be varied to match the resonant antenna. Frequency
can then be varied to observe how SWR varies over the band.

Download program R_X_SWR in a few seconds and run immediately.

No increase in price.

>the "so called" charity drive and/or being sold for cash.

You poor Texas guys sure are bitter.

As for me, after I'm dead I plan not to worry too much about
old ham gear. If I wanted to "invest" for my wife and
children then using ham gear to do it would be a very
stupid choice. That's not to say that I want my widow to
be cheated. But I don't plan on burdening her with
the crown jewels of ham radio. And if I did, I would plan
a way to have it managed without additional stress.

Anything I've left can be given away to someone who is interested
in using it... or selling it, if they are kind to my family
and considerate when they come and get it.

So if a ham says, "give it to the club" why do you care?

Well, here's a shot in the dark.
Not shipping due to the simple risks, lack of materials, etc.

However, If you can meet me in Ashland, Williamson KY/WV, or Charleston, Huntington WV areas, I'd be glad to bring it to you, no charge.
So if there is anyone out there interested, please give me a shout and let's meet up.

FOR SALE:

Icom IC-746 HF + 6meters + 2meters, 100w, All-Mode base radio. (Standard model, not PRO)
Modded for Mars/Cap, etc. Does about 1.0KHz to 174.000MHz, TX/RX
Includes installed optional narrow SSB filter and hand mic.
Like new condition.
Box, manual, etc.
**********
Dentron MLA2500B HF amplifier. 2kW, Does 160-10m. Tubes good, putting out legal limit on 110vac, and will do more on 220vac.
Includes manual. Has one meter light out, but each meter has two lights.
Excellent condition.
**********
Dentron Super Tuner Plus. 1kW limit. Multi-port antenna connections, meter, manual, etc. Like new!
**********
G5RV HF antenna, less than 2 yrs. old. No manual, sorry. :-)
**********

Includes coax jumpers, etc. Just connect your power supply, wattmeter and be on the air!

I've worked the world with this setup and guarantee you'll be happy with it.

THE IMPORTANT PART:

NOT taking offers or splitting up the set for now.
Priced at $1400 firm for everything.

Again, I cannot ship but will meet in the listed areas.

Shoot me an email if interested, please pass the word, and thanks much!
Randy, KC8CPK

> planes about 8 feet long.

Thats a 10-11 meter 5/8 ground plane...It can be used for casual
receiving, but how well it works will depend on the bands you use it
on. Naturally, it would be good for CB or the 10m ham band, and
probably receive ok on the higher HF ham bands, but for VHF/UHF , it
will be fairly lame. It's too long...You can try it though...

> As I was cleaning it up, I noticed a coil at the base of the antenna

> The coil is pretty rough shape.

> My question is in regards to this coil. Is it necessary? What function will
> it serve?

Thats the loading coil to tune the 5/8's radiator to a 3/4 wave
resonance. That gives a good match to coax.. On the band it's designed
for, that is...

I can rebuild it if need be but is that necessary?

No. Not unless it's broke..

And is 19 feet
> a good length for utilizing as many useable frequencies as possible?

19 ft is appx a 5/8 wave on 10/11 meters..That antenna is designed for
a single band. It's usable for casual listening on the HF bands. You
don't really need too good a match there in order to have a decent s/n
ratio. MK

## 2156. What batteries work with the Icom IC-U12?

Newsgroup: rec.radio.amateur.equipment
Date: 2004-04-02 03:20:43 UTC
From: mike <spamme0@juno.com>
Message-ID: <406CDC0B.7040404@juno.com>
Source record: 22208

I'm getting conflicting reports. Some of the battery sites
claim the 13V battery is compatible.
I remember reading that even the BP-5 was too much voltage.
Which batteries will work (not smoke) my U-12?
I've got an 8-cell AA pack that I'm afraid to try.
Thanks, mike

Just like the IC-2AT, BP-2/3/4/8 will be ok.
No BP-7's 13 volt battery on the U-12

I don't remember if the 10.8 volt BP-5 would work.
An 8 cell AA pack is just over 12 volts,I would not use it.

# 2158. FA: Kenwood TKR-720 VHF 50 watt repeater

Newsgroup: rec.radio.amateur.equipment
Date: 2004-04-02 04:48:14 UTC
From: Rick <callebs@earthlink.net>
Message-ID: <ig6bc.7262$NL4.760@newsread3.news.atl.earthlink.net>
Source record: 22210

For Auction on eBay:

Kenwood TKR-720 50 watt VHF repeater.

Includes installed and operational 50 watt mobile duplexer with all cables.

Includes ID8 CW (morse code) field programmable Identifier and Courtesy
Beep.

Includes desk mic and all AC power cables.

Presently operating on (TX) 159.66 MHz and (RX) 150.875 MHz with a 127.3 hZ
CTCSS tone.

Very clean. Fully operational.

To bid:
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=3087808320&ssPageName=ADME:B:LC:US:1

The price is now at $500 with less than 24 hours to bid. This would make a
very nice 2 meter machine.

Thanks,

Rick

Message-ID: <cJjbc.4064$sd5.2063@okepread02>
Source record: 22214

I have for sale two Vibroplex Standard Bugs. One is in good condition and
the other needs some repair. They are both 1960's vintage, I believe.
Serial Numbers are 19XXXX and 22XXXX. They have the 833 Broadway, New York
labels. They both have grey colored bases. The first key
is in good working order. There is some light pitting in the chrome parts,
but not bad. The base is in great shape. Price is $65.
The other key has a broken Lever Bar Spring and a bent Trunion Pin. It is
complete with two weights. It would make a good
Parts key or could be restored with new parts from Vibroplex. Price is $35.
Thanks, Charlie Hugg, K5MBX

>Thanks, mike

I have a cheapo 8 cell pack, and it is too much for the IC-2AT, 3AT, 4AT, U12, V12 line. I jumpered a wire across two of the battery positions, so it ends up being a 6 v pack, like the original Icom aa pack was.

As far as nicad / nimh packs, a b3 2, 3, or 8 will definately work with this radio.

## 2166. My plates glow red; is that ok?

Newsgroup: rec.radio.amateur.equipment
Date: 2004-04-03 02:33:34 UTC
From: Michael White <m.white66@verizon.net>
Message-ID: <2opbc.2378$I66.1237@nwrddc03.gnilink.net>
Source record: 22218

I just got a very nice Yaesu FL-2100B, running two 572Bs in parallel. It works great, loads 0right up, and put out about 600 watts of RF key down on 20 meters.

I typically run it at 300 watts by reducing the drive from my exciter, and run SSTV a lot. After about a minute at 300 watts the plates of both tubes glow a pretty bright red. It's not so noticable in daylight, but at night in a darkened shack it's quite bright, a cherry red.

Idle current is correct. The antenna shows an SWR of 1.5 at my operating frequency. I am not using a tuner between the amp and the antenna.

Is this glow normal? My tubes have the heavy graphite plates. They only glow after a minute of key down CW. On SSB, or keyed with no drive, they do not glow.

Any help will be appreciated. This is my first experience with this tube. Thanks.

Mike, N4PDY

Yes you never want to put anything over 10.8 volts on the 2,3 and 4AT
service. I know some have used 12 volts. I have seen many with the
final burned out because of it. Even the DC-1 battery eliminator
produces 9.6 volts.

The input ports on the BP-5A and BP-7 are for battery recharging only.
There is a little relay that splits the internal battery pack in half
for recharging once you connect DC or the wall charger to the jacks.

Hope this helps and the idea of removing two cells and shorting the
contacts so 6 cells will work is a good idea.

a friend asked me to post this for him, as he is geting out of the hobby for a while.

he has had the station setup in his house and has only seen use less than a dozen times, i think i used it more than he did. at the time he had a mag mount, he bought the outside antenna withthe intentions of getting more active, but never put it up. haha

this would makea nice starter station for a new ham, or even a a complete setup for and extra station in your QTH.

ICOM 2100H WITH BOX AND INSTRUCTIONS, 25 AMP POWER SUPPLY, NEW NEVER MOUNTED CUSHCRAFT AR2 ANTENNA, ABOUT 25 FEET OF NEW RG8U CABLE

ASKING $275/NEG.

reply to my email addy, and i will foward it to his addy

> m.white66@verizon.net

I would probably back off to 1/4 of the rated power as an absolute max
since the amp is rated 600 watts on SSB. I probably would run it at 75
or 80 watts for SSTV to let it run at less than flat out.

# 2180. ICOM IC-22S: modify VCO for 144 MHz operation?

Newsgroup: rec.radio.amateur.equipment
Date: 2004-04-03 18:19:38 UTC
From: tirebouchon69 <tirebouchon69@yahoo.ca>
Message-ID: <8fDbc.85737$1A6.2407524@news20.bellglobal.com>
Source record: 22232

Hi,
I want to modify an old ICOM IC-22s vhf radio for APRS at 144.390 MHz. I already made the 10 KHz step modification, and now I need to make it cover the lower part of the band, and this is where I get a problem:

If I set binary code "0" on diode matrix, I should get 144.390 MHz exactly, but the VCO doesn't work at this low frequency (even if indector vco is re-tuned). I see 2 possibilities:

1- Change X2 crystal 44.56333 MHz for a lower crystal. For exemple, a 44.250 MHz would make the rig start at 143.450 MHz, and binary code "94" would generate 144.390 APRS frequency. Any crystal between 44.0 & 44.5 MHz would be fine. Where could I find such a crystal? (Digi-Key has nothing around 44.0 to 44.5 MHz Xtals)

2- Modify VCO circuit to make it work lower (changing D3 varicap, C40 or L7 probably?). Did someone try this before?

Thank you in advance.

I "dimly" recall the changing of that crystal as being one possibility for moving that rig down, but geez, that's a pretty dated radio. I can't really offer any other help, but wanted to know if you were interested in a nice clean factory instruction manual on that radio?

<< Helpful hints are appreciated and a service manual would be really cool. >>

Paul-

Does it work on receive? I'm not familiar with the 732, but other SSB rigs use some of the same components on receive as on transmit.

Does it work on CW? Some older rigs generate a keyed tone and transmit it as "synthesized" CW!

Although unlikely the cause of your problem, some Kenwood rigs have a jack on the back for a transverter, that has an internal closed-circuit switch. If its contacts get a little corroded they make poor connection and the rig acts up when NOT using a transverter. The solution is to use the transverter plug that came with the rig's accessory pack, to exercise the switch a few times. The contact wiping action should clean it up for a while.

I found an "instruction manual" at www.mods.dk. You might download it and see if it happens to really be a service manual.

Hi, if this is a labor of love, or you just want to tinker to make it work with this radio I understand. Been there myself, but you can get a good used radio for not that much cash that covers 144-147.995MHz. And those "newer" radios will put out around 25 to 45 watts. Example: Kenwood TR-7930/ 7950, TR-7400, Yaesu Memorizer, FT-227R, Icom IC-27H, etc...
Good luck with your project.

Do it this way; Tune amp up normally at full power on SSB mode, or CW
mode.

Note the Grid and Plate current readings.

Reduce drive, as you have been doing. But RETUNE the amp at the lower drive
level. Reducing the drive as needed to maintain a level of 50% or less of
the full output readings.

See if that don't fix you up.

<< My 732 is generating RF but not mixing audio with the carrier on either band. >>

Paul-

Why didn't I notice the "TM" in the model number? I guess your reference to the carrier threw me. (Its NOT an SSB Rig!)

Unless Clif recognizes a chronic problem with that model, you may be out of luck without a diagram. Perhaps the www.mods.dk instruction manual includes one.

I'll try to pay more attention next time.

For Sale..........

External Matching Speaker for the Knight R-100 Receiver.....$60
plus shipping
Cosmetically excellent with no dings or scratches. Only flaw is a
headphone jack that has been mounted on the side. Does not have a logo.
I have seen them with and without.

I saw your other post about an 8444 tracking generator. Make sure that you get one with the 058 option.....this is the one that will work with an 8558. The standard 8444 without this option won't work. Been there, done that.

You would need an amplifier that has good multi-tone respones (read strong).
When you say 100mW, are you talking about signal power at one frequency, or integrated output signal power of everything coming into the input of this amplifier?
I believe that you are talking about a 100mW level for each received frequency.
Single frequency thru repeaters of the type you describe are used in this manner, but generally, a selective crystal filter that passes only one channel is used ahead of the input stage.

# 2195. Battery Pack Charging - Changing Batteries

Newsgroup: rec.radio.amateur.equipment
Date: 2004-04-04 06:29:33 UTC
From: Dick <LeadWinger>
Message-ID: <tq9v6054uoe8po1m5r0d9leg0vm632u40u@4ax.com>
Source record: 22247

I have a battery pack from a Uniden scanner that won't hold a charge any more. The pack has the charger circuit built in, and the batteries are nicads in a pack of six AA size cells of 600 mAh capacity. The charger circuit receives an input of 12v at 500 mAh from a wall-knob. If I replaced the 600 mAh batteries with 1200 mAh batteries what would be the effect on the charger? Would it just take longer to charge, or?? If I am going to replace the batteries I would like to increase the capacity at the same time.

The pack will still take a charge. Charging voltage at the batteries is 8.5 volts. It just discharges fairly quickly. The radio is probably 20 years-old, so it's a miracle the batteries lasted this long.

Dick

Yes, no problem .. provided you stick with NiCad's. If you go to NiMHydryde it may work, or it may not (or it may work for a while before showing problems) Certainly Lithium Ion is out of the question.

I've replaced the cells in my two BP200 packs once or twice now and I'm sure they are a higher capacity than original equipment .. but it's been so long I don't remember exactly what they are.

Non-smart chargers for NiCad's are frequently a constant voltage with
current limiting or a more-or-less constant current.

Higher capacity is fine, it will take longer to charge. Keep an eye
out at hamfests, you can find NiMh AA's up to 2000 mAh or more. They
are good for cordless phones, too.

You can download a similar manual from the army site
https://www.logsa.army.mil/etms/data/A/060577.pdf
This is an old link so here's the number.

TM-9-4935-601-14-7&P

May just have to search for 8640 on the site.

Hi All;
Anyone interested in this nicely working hand mike?
Tested on a scope & has nice output, I guess its Hi-Z.
Nice addition to your DX-40/60, etc:-)
It has a Gizmo on the end that allows it to connect to any standard atlas type
mike stand.
Don't need it so for $24ppd, its yours.

Hi
I am thinking of buying the new Kenwood TS-480hx radio. Does anyone use one
and if so what do you think of it.

Have you used one and got rid of it?

Have you heard anything bad about it (apart from high price)

I would be interested in your replies before I spend the money

regards John

It got a pretty good review in the March issue of RadCom (the RSGB
monthly mag). Not necessarily a contest rig, but no major problems,
and fairly decent performance.

Anytime Tom.....I went through the same thing a couple
of years ago. I bought the 8444, and discovered that it had a different I.F.
output frequency than what was required for the 8558. The service manual for
the 8444 should still be available as a download from the Army manuals
website (DOD? I can't remember).
Since I bought an 853 mainframe, I would be willing to sell my 182T
mainframe for a good price. Let me know if you need anything like that.

# 2220. Kenwood TK-941 Questions

Newsgroup: rec.radio.amateur.equipment
Date: 2004-04-05 16:20:16 UTC
From: Civalo <civalo@gawab.com>
Message-ID: <c5165s$2dgv$1@news.wplus.net>
Source record: 22173

My brother in law works at a truck repair shop, he recently got his hands on a Kenwood TK-941 that was being thrown out. I was wondering what anyone can tell me about the radio. It seems fully operational, although it needs programmed. (found the software, need a cable)

I was basically wondering what the value was on them, what it might cost to get another radio that will work with it. (one in each rig)

I know the radio ops on 900mhz range, and due to the spftware, I know the freqs, but I really don't know much about the radio. Also, I have yet to get my Radio liscence. I haven't quite figured out what I wanna get. Will an amatuer radio liscence cover me on 900mhz?? I think tech is 2 meter only, If I remember corerctly.

Thnks for helpin a newbie.

PS. Although I don't know much about the liscences and stuff like that. I used to work on satellite systems for the navy. Kindof a tech junky. If anyone needs help/info technical wise, lemme know...I'll do what I can.

Source record: 22274

IIRC I was able to move mine down by retuning coil in the VCO. Of course
the rig lost vco lock a few weeks later and never worked again .... a common
problem I was told )c:

Probably won't help too much. I didn't in my case with that amp, when
I tried reducing the loading. 300w "1/2 power" is a bit high for
continuous duty SSTV. I would cut that in half to about 150w. I've had
the sb-200 and also the fl-2100b. They both are hot running amps. The
plate dissipation is only 320w compared to 1000w for a pair of
3-500z's. I would mount a fan on top to help cool a little better.
Heck, with my henry 2k classic, I only ran 300-400w for SSTV. "The amp
does about 1300-1400 w. " And the tubes would start to blush a little
on it. MK

# 2225. FS Vintage Hallicrafters SX-117 Receiver

Newsgroup: rec.radio.amateur.equipment

I have for sale a nice Hallicrafters SX-117 Receiver. It does work, but seems to need an alignment. Sensitivity seems low.
It is complete and original. Cosmetically, it is nice. A few small scratches in the paint of the cabinet. Face plate is great.
Chassis could use some cleaning.
Comes with origial manual. This is a Ham Band receiver, but has several optional positions on the Band Switch to add Crystals for 500 Mhz segments of Shortwave Bands.
Price is $175 plus shipping from 79602. Digital pictures available. Thanks,
Charlie Hugg

Message-ID: <aSkcc.16765$wq4.713782@news20.bellglobal.com>
Source record: 22278

Hello all:
I have a yeasu FT-8000 144/440 Tranceiver
I would like to know how to rid of the "AM" which comes up on screen on a
few frequencies
I have tried to reprogram with proper Mem/ Ch/ Freq/ -600/ Tone and
it stays there
It will not transmit on that frequency ERR comes up
I have looked throughout the manual and I cannot find any info on this
If someone would be kind enough to reply who had the same experience would
be much appreciated
Thank you in advance

> I would probably back off to 1/4 of the rated power as an absolute max
> since the amp is rated 600 watts on SSB. I probably would run it at 75
> or 80 watts for SSTV to let it run at less than flat out.

For the short time the pix is being sent the amp should take atleast 500
watts out if only only one pix is sent as per usual. It only takes 10
seconds or less to send the pix.
If using RTTY or PSK31 where the amp is keyed up for a lot longer time , it
should be derated alot.

## 2232. What is the length of a 5/8s wavelength 2 meter antenna?

Newsgroup: rec.radio.amateur.equipment

Lets assume you want a center frequency of 146 megahertz...

300/146=2.057945m (round it to nearest mm 2.058m)
2.058/8=0.25725m
0.25725x5=1.28625m (round it to nearest mm 1.286m)

Now I have a few questions...

How the ^%$#(*&$ do you get to even own a 2m radio without knowing how to do
this ELEMENTARY calculation? Do you have a licence? Have you learnt
absolutely nothing? This formula is the first one in the book together with
Ohm's Law!

Source record: 22285

You might want to try a CPU reset.
You might have to do it a few times.
You will have to re-program the radio
after.
Good luck, 73
By the way. If you ever have to tighten the volume / squelch
knobs, DON'T!! Those switches are mounted VERY poorly
and you will rip the control off the circuit board. This might be not
fixable!!
Took me 4 HOURS to repair it with wire wrap wire. Any other wire is
WAY too big. This is truly micro surgery!!!
The only way to tighten the knob is to take the front panel apart
and hold the back of the pot so it won't rip off the board.
SHAME ON YAESU!!!!!!!!!!!!!!!!

While I do not claim superiority in my knowledge, I must wonder myself sometimes about those with a license. I know one person who doesn't know what a "ground" symbol looks like in a schematic - and "that" is one of the "basic"questions on the exams. I know another who has no clue what a "fuse" does. Now, "that" is sad. Calculations? Even when learned, some do have math problems - to some extent, I can understand that. Learning formulas and being able to do them, is not always the same.. Sounds contradictory I know, but I've seen that myself a few times. It amazes me sometimes..... Hell, I know people who don't know the resistor color code, can't figure out resistors in series or parallel, etc. "All" or any of the things they learned to get their license.
Most people just do what it takes to get a license. Once they start yakking, they lose the knowledge from lack of use of it. Even that is hard to fathom considering the many technical chats one would tend to hear. YEP! It sure is hard to imagine, but it is true..... sad but true! Lou

Kenwood TM-V7A Complete with programming cable,
Software, and remote mount.
$280

Standard C468A 95% $100
Includes 1 CWC150A Wall wart

PacComm Sprint-2 TNC Like new,
With AD-4 Analog-to-Digital board
With cable for Kenwood TM451A $100 obo

Icom 02AT with BC-35, stock battery and wall wart.
And extra Ice brick battery $ 75

Maha MH-C777 Universal Charger-Conditioner LNIB $ 30

Dynamic Communications
Model A470-25 $ 20
Sold as is, no manual.

Model 10-0 $ 20
Sold as is, no manual.

Carver Audio Amp 95+%
Model M-2120
With Manual. $ 75

All Items Will include manuals, and any docs that I Have.

I have a lot of older computer parts/MOBS-CPUs/boards
ect. Everything from Rll,MFM to SCSII controllers.
contact me for what you are looking for.
I have an External Scsii CdRom changer that uses Pioneer
cart.
Is listed on Ebay

I also have a NIB IDE raid controller with 2 carts.

I also have a lot of C64's 3 good 3-5 fixable or parts.
Much peripherals - drives,printer,parallel/serial ports,
modems, tape drive, graphics pads, joysticks, ect.
AND a lot of cartidges, and software - games to productivity.
Included is all manuals, plus extra books for programming ect.
Included is software to run a bbs from the C64..
I would like to sell it all as one group. Will cost more,
if sold piecmeal....

$150 takes it all.

I will be at Dayton next month, so you can save on the shipping.
Contact me ahead of time for arrangements....

Shipping is NOT included

Ok lets start this over again

Hi Moody,

The ansewr to your question, if you intend to use it on the upper portion of the band (tuned to 146Mhz) would be 48.12 inches.

Aside from your asking antenna question here, also check out the ARRL Handbook, as you will find the answers to simple questions, others get annoyed at LOL

also visit the http://www.qsl.net/w4sat/antenna.htm website.

As far as the point you expressed Bob, I agree with you somewhat. Not all Techs dont know anything. I have spoken to many Advanced/Extra that cant figure out the length of a dipole for 40m, or how to program the memory in the 2m radio. Even go as far as "you are not on frequency, and you dont need to say over on a repeater". Now it makes me made when, me being a Tech needs to answer these questions

Take in to the account of why many join the ham ranks. Not all are technical minded people, or not yet atleast

73

Perhaps he took the test over a year ago, has only been using a HT,
and is now wanting to get into mobile use?

Let me ask you a few questions:

How far in advance of a turn are you required to use your turn signal?

What is the maximum distance you may enter a bike lane prior to making
a turn?

You may use your hi beams if a car coming towards you is more than
____ feet away, or if a car is in front of you in the same direction
as you, more than _____ feet away.

Gee, you don't know? How the &*^#*$@ did you get your drivers license?

Get the point?

Evan

Hi folks,
I finally decided to change X2 crystal (normally 44.563333 MHz). I found a company that sells the appropriate crystal:
http://www.surplussales.com
They are located in Nebraska and sell on line. They have 44.083333 and 44.125 MHz crystals, both suitable for 144.390 MHz modification (after step modification with X1, of course). Each crystal is $ 4.00 US.

Hope this could help.

Daniel VE2BAP

Others have given you the length. They failed to mention that the impedance
is not 50 ohms and you must match that to the coax/rig. You will have to
research that for yourself, but usually a coil is used in series with the
antenna at the base of it.

Whilst he could've been a little more 'tactful', you must admit that it was a question that any newcomer studying for their licence should've known, let alone someone actually in the hobby....

But, that's just my opinion...

Also relevant:

The calculated length is close, but factors like material type,
thickness, etc, mean that the actual length could be a little
different. Electrical length is what counts, not physical.

Best bet is to take the calculated length as mentioned earlier, add a
little bit, and cut to that greater length. Then test the antenna with
an SWR meter, trim a little shorter, and test again to optimize SWR
across the band of interest. You will never hit 1:1 (more of a
theoretical goal) but below 1:1.5 across the 2M band is fine.

Start your testing at a low power, until you know the SWR is below
1:2.

Happy trails,

No, you're probably not stupid... maybe ignorant. You can fix that. If you don't own a copy of the ARRL Handbook, then GET ONE! Its the best single source of info you can get, and you will find answer to most if not all of your questions in there.

I'm looking at getting my liscence (within the next week) and getting setup on 2m band. Anyone know of a good deal on a 2 meter setup? If not, can anyone recomend a good redio for beginners. I'm a bit of a tech junky, know a lot about electronics, programming etc. So I'm not too worried about ease of operation.

Any info would be great.

Thanks

Jonathan

Jonathan

Evaluate your needs whether HT or mobile or base.

Typically the new licensee purchases a Handi-Talkie (HT) for VHF/UHF, but later find they are using their first radio mostly in a mobile or at a home base station. A mobile rig can be easily switched back and forth between the vehicle and a base location and offers considerable advantages over an HT.

This is not to bad-mouth the HTs, they are great for carrying in your shirt pocket or belt clip for pedestrian use, public relations activities, and traveling light. Just be aware of their limitations and intended use. They certainly can be used for base and mobile applications, but better antennas and DC power sources are definitely something to consider when you settle in on an HT.

A mobile radio on the other hand can transmit up to 70 Watts, operates off of car DC power or a DC power supply at the base location and can use an antenna which typically is vastly superior to a rubber duck. Operating range will be considerably greater with the higher power and good antenna. Prices are about the same. So evaluate your needs and decide which starter radio is best for you. Many eventually end up with both mobile and HT rigs.

I'm leaning heavly to mobile. I used to be on the CB a lot when I lived in
a smaller town. Always used a mobile then.

Eventually I may figure out someway to use a mobile in a vehicle as a
repeater for a handheld. Has this been done for amatuer use already?

Thanks

# 2280. Re: Low Cost 2m Setup for Beginner (crossband repeating)

Newsgroup: rec.radio.amateur.equipment
Date: 2004-04-07 19:30:04 UTC
From: Incognito <BLB@sero.net>
Message-ID: <1FYcc.31$Va4.10@fed1read01>
Source record: 22182

Cross band repeating (CBR) is a feature with some VHF-UHF dual band radios that simply repeats what it receives on one band and automatically retransmit it on the another band. This might be used when hiking or camping. Your vehicle is on a hill and you are in a valley below. You can take an HT with you and transceive to your mobile radio which will amplify and cross band repeat to a repeater or other users. Some HTs can control the mobile rig allowing frequency changes and voice feedback of the changes. Several configurations can be used; Simplex-To-Simplex CBR, Simplex-To-Repeater CBR, One-Way-CBR, and various modes of duplexing, simplex, half, full, etc. Be sure to read the FCC rules regarding cross band repeating. See Part 97.119 (a) Identification; Part 97.201 Auxiliary Stations.
There are just too many schemes and different radios that can do crossband to cover in detail here. Each manufacturer has their own method of implementing cross band repeat, so you will have to read your manual for how to set up and use the radio. An excellent series of articles can be found at the ICOM page. URL: http://www.icomamerica.com/ Here go to technical support, then ICOM Technical Documents, then ICOM Crossband Repeater Information. For Auxiliary or Remote Base operation, the radio manufacturers have application notes for the various radios.

Your local Ham radio store can advise you as to the features of dual band radios

Ever Wondered What Happens When the Cameras
are not On During Survivor or Temptations Island ?

Curious About What Happens Behind Closeed Doors
On Big Brother or American Idol?

You Know Crazy, Wild and even Obscene things Happen!

The Networks Dont Want you to See This!!!!
BUT WE SHOW IT TO YOU!!!

http://tinyurl.com/2xcy2

BECAUSE THE CAMERA WERE ROLLING the Shots just got
BANNED or CENCORED but we Have the SECRETS from REALITY TV

This is for real You Know You Want to See It!

More Erotic Than Temptation Island
Beyong BigBrother
Sexior than Survivor
Better than the Bachelor
Raunchier than The Amazing Race

Nasty Obscene, erotic, dirty, insestuous, gross, indecent,
sleezy, impure, wild, erotic, pornographic, smutty,
risque, sensual, sexy.........
YOU NAME IT - THEY DID IT
ADD WE HAVE THE PROOF

The Contestants Did it all and the NetWorks Couldnt
Show it, it was Banned, Cencored there Secret
Now we show you what they were doing!!!!

Fetishes, Lingere, Lesbianism, Bi Sexual Experiments,
Foot Fetishes, FORCED SEX, Cross Dressing, Swinging,
jacuzzi group sex, threesomes, hi heels, rubber,
Whatever turns you on - they did it while they
thought no one was watching.

The Real Private Secrets from, Survivor, Bachelor,
Bachelorette, Temptation Island, Mole, Joe Millionare

Contestants caught naked, stripping, playing, sucking,
fucking

Did you know some contestants were lesbians some were
sluts, On one show a chick gave everyone a blowjob

including the camera MEN!!!!

Behind Closed doors, in changing rooms, dressing rooms,
in the bushes, private sets, closets, showers, lakes,
all sorts of places they thought the cameras were not
around, BUT THEY WERE and WE GOT THE SHOTS!!!!!

All the things that got Cut out, the
camera men saved them after the Network
cut them and banned them.

You Wont See this ON Jerry Springer!!!!!!!!

You Think Girls Gone Wild was HOT This is like
The Sexual Olympics, but only for Real

The Cameras Caught them - The Networks CUt them
WE HAVE THEM

Quick Before they get Cencored or Banned Here!!!

OutFuck - OutSuck
Who Will be the Last One Hard

Since the TS-50 is a current production model, you can get original manuals
from Kenwood. Just check their website. Some of the copies on the
www.mods.dk are not of the highest quality although usable.

# 2286. NEED help with KENWOOD TH-21/31/41AT

Newsgroup: rec.radio.amateur.equipment
Date: 2004-04-08 02:33:12 UTC
From: Steve <LafayetteRadio@optonline.net>
Message-ID: <4074B9FA.992454F5@optonline.net>
Source record: 22188
Cross-posted to: rec.radio.swap,rec.radio.amateur.swap,alt.ham-radio.vhf-uhf,alt.ham-radio.marketplace,rec.ham-radio,rec.ham-radio.swap,rec.radio.amateur.equipment,rec.radio.amateur,alt.ham-radio.mods

Hi all, I have a Kenwood TH-31AT. This is a 220MHz small handi talkie
dating back to around 1985.
The PL in this radio does not have dip switches on the front panel like
the newer version "TH-31BT"
The PL is inside the radio and the PL is selected by soldering /
unsoldering the pads on the chip.
Does anyone out there have the information that tells which pads to
solder / unsolder for the different PL frequencies??
I have about given up looking for it on the internet.
The PL board inside the TH-21AT (2 meters) and the TH -41AT (440) is the
same as the TH-31AT.
If you have this info and it's not to much trouble can you send it to:
lafayetteRadio@optonline.net
THANKS for your help!!!

# 2287. Re: Low Cost 2m Setup for Beginner (crossband repeating)

Newsgroup: rec.radio.amateur.equipment
Date: 2004-04-08 04:10:50 UTC
From: Civalo <civalo@gawab.com>
Message-ID: <c52jan$2fpk$1@news.wplus.net>
Source record: 22189

I heard a conversation on the good 'ol scanner earlier about CBR, Apperently there is a bit of a delay caused by the radio switching back and forth between bands. I guess this is due to the squelch circuits controling the switch.

The conversation went on that he setup a radio as a remote/repeater instead of using a rig with cbr.....

Any thoughts?

Thanks again
Jonathan

I am interested in buying a couple of cheap 2 meter HT's that are not
digital display.Something like a Kenwood TH-21 or an Icom IC-2A.
Please state price and condition.
THANKS !!!
...Charlie...KC0EH...

# 2289. Re: the length of a 5/8s wavelength 2 meter antenna?

Newsgroup: rec.radio.amateur.equipment
Date: 2004-04-08 04:30:12 UTC
From: fmmck@aol.com
Message-ID: <20040408003012.09636.00000735@mb-m24.aol.com>
Source record: 22191

<< Please help me out with the math. What is the length of a 5/8s wavelength 2 meter antenna? I've got something that might be able to be cut to the freq. >>

Moody-

Did you realize what a stimulating topic this was going to be? Perhaps I can help by announcing that there are two slightly different legitimate answers.

First, radio waves travel very close to 300 million meters per second. The two meter band is roughly at a frequency of 150 million Hertz, so one wavelength would be 300 million divided by 150 million. I think you get the idea, and can use your exact frequency to get the exact wavelength. In the case of a 5/8th wavelength antenna, simply multiply the calculated wavelength by 5/8 (or 0.625). (One inch equals 0.0254 meters.)

To use such an antenna, you must find a way to connect your transmission line to the antenna and a ground plane, so that it matches. In other words, you want to transfer the maximum amount of power to the antenna so it can be radiated, and reflect the minimum amount of power back to the transmitter.

The beauty of a 5/8th wavelength (ground plane) antenna, is that it is extremely easy to match. Its input impedance is 50 Ohms resistive in series with a small amount of capacitance. Therefore you need a small amount of series inductance to match it. Some higher-frequency examples use the stainless element itself, wound in a small coil near its base.

The other "legitimate" answer is that a given 5/8th wavelength antenna you buy, may actually be 0.58 wavelength, NOT 0.625. Such antennas are usually called 5/8th because of the confusion between 0.58 and 5/8.

The beauty of a 0.58 wavelength (groundplane) antenna, is that it concentrates the maximum amount of power towards the horizon, compared to other similarly constructed antennas (according to my Antennas Professor, 35 years ago). While it is true that there is a small lobe towards the sky above, the main lobe is sharper than the lobe of a quarter wave ground plane, and is aimed almost directly at the horizon. If the vertical element were any longer (say, 0.625 wavelength), the lobe pointed up would increase and sap some of the power from the lobe towards the horizon. If it were shorter, the main lobe would be fatter and power would be spread over a larger, slightly higher angle.

A drawback of the 0.58 wavelength antenna is that it is not as easily matched. Such antennas are often matched with a tapped coil. The bottom of the coil is connected to ground, the top to the antenna element, and the co-axial transmission line center conductor is connected to a tap on the coil.

Instead of posting look the formula up in your study guide. Learn how to find your information in the guides and Tec manuals first. Go out and pick up a copy of the ARRL Handbook and learn how to use it. It has the basic formulas in it and how to put them to practical use. I had to question how you got your license also not knowing that formula. I will give you 1 piece of advice. When you are working with metric DON'T Convert just keep it all metric.

The US tests are so easy that I can see the extra class people not knowing the length of a 1/2 wave for 40 meters. I am only licensed Basic in Canada and just for fun I did the extra class exam on the QRZ web site. Scored in the mid 70% range with no studding and I am not the brightest light-bulb in the tree. Especially when it comes to math.

OK I admit I did come on a bit too strong, I'm sorry.

However, your analogy with drivers licence test questions is a bit off
base...
Not knowing how to convert between frequency and wavelength is much more
fundamental than knowing the distance to dip your lights.
Its rather like being uncertain about the difference between a steering
wheel and a spare wheel.

Anyway this is the last word I'm saying on this topic.

## 2294. FT-90 Startup Insanity???

Newsgroup: rec.radio.amateur.equipment
Date: 2004-04-08 15:02:40 UTC
From: Vito <vito@crosslink.net>
Message-ID: <40756994$0$642@dingus.crosslink.net>
Source record: 22196

Hi,
My YL & I have Yaesu FT-90s in our cars. We have been more than satisfied with them except on cool mornings after they've sat out overnight unused for a day or two. Then either the display goes south and/or the rig refuses to xmit, or to recv (not necessarily all at once) until fiddled with (e.g., keyed up, tune knob twisted, cursed, et cetera) awhile. Once it works, it's good to go for the day. I've been told that Yaesus are afraid of the dark and to put a light bulb under them but that'd be a pain since they're mobile. Anybody know a solution?

TIA, K3DWW

Typically, the radio can be adjusted for "hang time" which would
shorten the delay you mention.

BTW, ditto to Incognito's responses - they are dead on.

Howard

# 2297. Need advice on tube glue

Newsgroup: rec.radio.amateur.equipment
Date: 2004-04-08 17:24:52 UTC
From: Michael White <m.white66@verizon.net>
Message-ID: <EVfdc.724$F9.235@nwrddc01.gnilink.net>
Source record: 22099

One of my 572Bs is loose in its base. It works ok, but whatever glue they used to attach the glass envelope to the base has let go. Friends have recommended everything from Elmer's GlueAll to CrazyGlue, but I wonder about their ability to stand up to the heat. Any advice on what to do? Thanks.

Mike, N4PDY

Spam from VoteNader.org? (Or naderexplore04.org)

You may have received spam email recently that appears to come from our campaign, or be about our campaign -- perhaps the "From" and or "Reply-to" addresses look like they are coming from VoteNader.org. Or perhaps you have received a message that appears to come from an individual (if the address is real, the real owner probably did not send this email either) with suppressed recipients. Or maybe you received an email that appeared to come from yourself promoting our site.

These messages are NOT from Nader for President 2004, and these email tactics are NOT condoned by our campaign in any way.

UPDATE: Some of the latest forged emails have been made to appear to be coming from naderexplore04.org. Again, we are not responsible for this unfortunate abuse of email, and there is little in the technical sense that we can do to prevent this as it has nothing to do with our actual infrastructure. We are collecting information.

NOTE: The emails with malicious code (viruses, worms, etc.) often have attachments. Our campaign will NEVER send attachments in our announcement emails to you. Please be sure that you have anti-virus software and have the latest updates available for your anti-virus software.

Our hosting service has alerted us to say that Nader for President 2004 appears to be the target of what is called a "Joe Job." Such an event is where a spammer forges email to make it appear to have come from some other domain (such as ours -- or yourself). This is hard to prevent on our end and part of the insecure nature of the email protocol in general.

Members of our actual email list must request to receive email from us (either through Ralph's signup sheets or subscribing during our exploratory phase, or now on our campaign site). When one signs up for email they must reply to a confirmation message before they receive our list announcements.

Our public announcement emails come from "campaign@votenader.org," contain a "Paid for by Nader for President 2004" statement at the bottom, and have "updates@lists.votenader.org" in the "To:" header. Unfortunately, some of these indicators can be forged as well.

Most of the Spam that we have received complaints about appear to be forged from email addresses not associated with votenader.org (often

forged to appear to be coming from government email addresses), and have our website code embedded in the body of the email with hidden tags that contain random words that work to subvert anti-spam software.

If you are on our lists, you can ALWAYS unsubscribe at ANY time by following the instructions included at the end of our announcements. You can also use our unsubscribe page using the email address you signed up with.

If you are receiving this SPAM, we extend our apologies.

We will pursue the spammers to the full extent of the law.

Allah for help, call Muhammad (PBUH) for help. I don't
know i guess I am not a human being, I guess I must an animal as Jews really think and treat other races like that, we were born to be raped and become mice for their biological weapon tests. Later when I was found apparently bones all over my body were broken down, other than the fratures in lower right leg, all the other bones were fractured by Mahmud Kurchu.

This is not the only thing they did, Selgin Inan and his other students started pissing and spitting in the water, then they would tip my head in the water for very very long time, sometimes eventually I had to breath and all this water would go in my mouth.

And God you are the only one who knows the truth, so please pass the unbiased judgement and truth and show the world that truth will revive and you are on truth's side, not the truth that I think is the truth, the truth that really is seen by you as truth, oh God.

wa'Salam
Mohsin

Real conspiracy theory's script: causing damage to DNA using jewish chemical and biological weapons.

Assalam u'Alekum:)

People of the world, Jews destroyed my body when I was only a child, all I want is justice, and I think I have the right to ask and win justice. Sometimes he and his students punched me so hard that my body started shaking, and this happened many many times. The second night he did not allow me to sleep at all, in fact every time I would even attempt to sleep he would dip me in water again, sometime I lost breath completely. I prayed to God again and again for help. He gave me another injection it is said that, the cells in my body have been permanently damaged genetica

I've got a solution... Throw away those FT-90 and get a good radio!

I looked at those for about 10 minutes, until I found all the horror stories about them.

Sorry I don't have a constructive answer for you, but I felt the need to put in my $.02.

We have had two like that here in Chicago that do not work when cold.
Seems like either a lot issue or the radio is not designed for cold weather.

you exactly what happened I don't think he meant what he was saying, somehow he had to say that

I still can?t understand if they erased my memory to make sure I give a different statement I did as they told me that I was injured in a car accident, then why the kept giving me injections. Why would good cops burn my skin with cigarettes, I just don?t understand some of these things. I think essentially because good people were too scared to face bad guys, it gave bad guys the chance to essentially direct the events the way they wanted. Because today we are doing what we could have done four or five years back, and I honestly don?t understand the point of giving injections later. But during these few years, I think my body and nervous system was badly damaged by Jews, at the same time they actually did the best they can to direct everyone else against me, special thank to our weaknesses, mediocrity and faithlessness. And frankly speaking if it wasn?t for God and then those few good men God created in today?s corrupt world, I honestly would have died in those four five years.

I think we will bring an end to this Conspiracy theory?s real script now: but the story will continue, I want you all to see how jews control

the society and opinion, how they create and control opinions, and where we all went wrong.

Last updated : Thursday, June 19, 2003 10:39
This page in underconstruction

People I am a human being, I am telling you all how I was raped by Jews, only because I did not sleep around, people did these

People I want to do you think I have no feelings.

This man had frequent meetings with people who are working for Amir Butler (another oragnised terrorist) to frame Muslims and Christians in fights.

I do just day before my departure, he came to mosque to confirm and somehow he got the impression that I will not be going, he suddenly felt bad, he said he had arranged my murder in Pakistan and he also wanted to teach me a les

# 2309. Ham Radio Deluxe v1.2 now available!

Newsgroup: rec.radio.amateur.equipment
Date: 2004-04-09 10:47:25 UTC
From: igoruberwald@home.nl
Message-ID: <e9b53b2a.0404090247.7deabaa0@posting.google.com>
Source record: 22111

Hi all,

The Ham Radio Deluxe Development Team is pleased to announce the
release of Ham Radio Deluxe v1.2 (final release version)

The major changes wrt v1.2b (build 334) are as follows:

Build 348

Bandspread tuning option
Fixed problem displaying supported commands on Kenwood and TenTec
Added more IC-756Pro options
Added more TS-2000 extended menu options (50A to 50D)
3D tuning bars implemented
Added many more FT-857 and FT-897 options
Added even more FT-817 options
Added CAT command macros
Added DSP high cut and DSP low cut for the TS-2000

You can find more info at:

http://www.ham-radio.ch/forums/viewtopic.php?t=45

and remember: Ham Radio Deluxe is FREEWARE - by radio amateurs for ALL
radio amateurs, regardless of race, creed, class (or lack of it!) and
IQ.

145, Pete/Igor PH1PH - G7ECN

# 2310. ASTATIC NIGHT EAGLE MIKE !!

Check with one of the larger Yaesu retailers, like HRO or AES or TT.
Talk to someone, don't just do the website.

No, gasket silicon cannot shrink that much, it would defeat the purpose
of being a gasket needing to be oil/water tight......

The TM-G707A is what I use. I've owned 3 of them as a matter of fact. None
of the broke, I just got rid of the other two at various times to try other
radios, but I've gone back to the 707 in the car.

## 2316. TAC Bug

Transmits on three non-ham freq's (500, 2182, and 8364Khz), weighs 20Kg and
the postage is 120 Euros. I guess I will stick with my FT-817....

Unit is not cellular blocked as US versions are
Selling ICOM IC-PCR1000 Computer controlled reciver.
I've used the unit less then 10 times.
in mint condition. Original box and manual and accessories.
specs are below or full specs at:

http://www.icomamerica.com/receivers/pc/icpcr1000main.asp

Email netimports@msn.com first one in gets it.

Selling for $300US / Located in Canada , Toronto
email me if interested. Will ship to anywhere

Bob

Specs:

Frequency Coverage (MHz):
0.010000 - 823.999999
849.000001 - 868.999999
894.000001 - 1300.000
NO CELL BLOCK
Mode: WFM, FM, AM, SSB, CW
Number of Memory Channels: 1000 channels per file (number of files created is up to the user)
Antenna Connector: BNC (50 ohm)
Useable Temperature range: 0° C to +50° C; 32° F to 122° F
Frequency Stability: ±3ppm at 1300 MHz
Frequency Resolution: 1Hz (minimum)
Power Supply Requirements (negative ground): 13.8 V DC = ±15% for receiver unit or supplied AC adaptor
Current Drain:
Power ON: (PC Power Off) 0.1 A
Max. Audio: 0.7 A
Standby (squelched): 0.6 A
Dimensions (projections not included):
126(w) x 30(h) x 199(d) mm
5(w) x 1.2(h) x 7.9(d) in
Weight: approx 1 kg
2 lb, 3 oz

You could call or write Yaesu Customer Support. When my FT-50 was in
for a quick repair they replaced the missing cover for the speaker/mic
without me having to ask. This item is begging to be torn from the
little nub that holds it in the radio as it just flaps about when a
speaker/mic is plugged in. Anyway, you can contact Yaesu at:

Yaesu Customer Support
attn: Fed Kix, Manager
10900 Walker Street
Cypress, CA 90630
(714) 827-7600 phone
(714) 527-9031

My dealings with them have been very positive and I'm sure you'll end
up with just what you need and possibly mailed to you with no charge
(don't take that to the bank, but it wouldn't surprise me - they
display very good customer focus).

Good luck,
Howard

## 2328. TH-31 tone board

Newsgroup: rec.radio.amateur.equipment
Date: 2004-04-10 08:49:54 UTC
From: gardnerh@juno.com
Message-ID: <3f7f2886.0404100049.79b4456a@posting.google.com>
Source record: 22130

The pinouts are the same as the Com-Spec TS-32. In my case I mounted a small dip switch in a hole carefully carved into the lower right corner of the case front and secured with hotglue. I then used fine wire flat cable to connect the switch to the tone module. The result was truly useful.

> NO CELL BLOCK

Why do you give the US-version specs?
The EU-version has general coverage with no gaps.
0.1khz (500khz guaranteed) to 1300Mhz continously.

f'up

# 2340. Homebrew Dipole help please?

Newsgroup: rec.radio.amateur.equipment
Date: 2004-04-10 14:08:54 UTC
From: Bob <nubob5001@yahoo.com>
Message-ID: <0ITdc.12083$R37.11253@read1.cgocable.net>
Source record: 22142

Hi
We have put together a dipole, each leg is 66 feet. We put a 1:1 balun and it is running about 60 feet of 50 ohm coax. Presently it is about half way up the tower it is intended for so we could check the SWR before getting it up to the highest point. Presently each leg has some lags and dips, no major bends but it is just hanging there, over some bushes and the entire thing is over top of the house, and not touching anything but is very close to some steel guy wires (uninsulated).
Now we can only tune this down to a useable SWR on the 80m band. On all other bands we cannot tune it down to a safe operating range. We are using a good antenna tuner but cannot get anything useable except for 80m. Here we are able to tune the SWR right down.

Questions???
Would we be better without that balun?

Is the fact that the dipole is still too low and close to the guy wires ( but not touching) our problem?

Any suggestions please??

Thank you.
Bob

# 2341. HELP: Icom IC-RP1220 (1.2GHz) repeater drifted.

Newsgroup: rec.radio.amateur.equipment
Date: 2004-04-10 14:59:30 UTC
From: phoneguy99 <phoneguy99unspam@unspamsympatico.ca>
Message-ID: <EYTdc.43110$wq4.2548623@news20.bellglobal.com>
Source record: 22143
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.antenna

I have an Icom IC-RP1220 set for 1285.500 with a -12.0 input.
It's been out service for a few years, but was acting up before it was
pulled out. Now that I have time to play with it, I've noticed its
drifted 'up' 6KHz both on RX and TX, yet no chenges were made to the CPU
settings.

I have the owner's manual, but no service manual.

Is there a common xtal controlled base clock shared between the TX and
RX circuits? If so, where would the trimmer adjustment be located?

Or, if this is a problem experienced by others, and the cause is
something else, some advice would be very much appreciated!

Thanks!

Pat, VE3PMK

# 2342. Re: Kenwood TS-480hx reports please

Newsgroup: rec.radio.amateur.equipment
Date: 2004-04-10 16:01:35 UTC
From: fmmck@aol.com

<< I am thinking of buying the new Kenwood TS-480hx radio. Does anyone use one and if so what do you think of it.

Have you used one and got rid of it?

Have you heard anything bad about it (apart from high price) >>

John-

I have had mine for several weeks, but haven't had much time to get to know it. I purchased the 100 Watt version with the tuner built-in. Over all, it seems to work well. My complaints are about things that others might not mind.

My most significant concern, is that the front panel isn't just "detachable", it is PERMANENTLY detached. My personal preference is to have the front panel as part of the whole radio. I don't like having to pick up the front panel to make adjustments, or to have to bolt it down to the desk (or dash panel in the car). The owner's manual shows a holder that allows both front panel and main unit to be mounted together, but it is a European option NOT available in the U.S.

This is my first radio with audio DSP. It has the usual Noise Blanker, so the audio filtering is in addition to that. From what I've read, it would be better if it had IF DSP instead, but that would probably add a lot the radio's price.

I purchased mine with the narrow SSB filter, the 500 Hz CW filter, the voice and the TCXO options.

The filters work well, comparable to other filters with the same specs in other radios. I find it a little awkward to change between filters, but that may be a matter of needing to know the radio better.

The voice works as expected, but might become a little tiresome after a long session. I may eventually just turn it off, but that would disable some of the more advanced uses for it, like having it call CQ for you!

The TCXO seems to be better than specified. After a few minutes of warm-up, I can't detect any drift. The owner's manual mentioned a method of adjusting the frequency that seems to work well: you set up two memory channels, each 1.000 kHz away from a WWV frequency, one higher and one lower on opposite sidebands. When switching between the two channels, you adjust the TCXO frequency so the 1.000 kHz beat notes are the same. You may be able to detect differences in the order of one or two Hz. Unless you are quite tone-deaf, you should be able to hear a difference of less than 10 Hz. At 20 MHz, that would be a difference of 0.5 PPM. That corresponds to 0.25 PPM maximum error since one tone would be 5 Hz above and the other tone 5 Hz below 1.000 kHz. (Use of a lower offset,

like 100 Hz, might be more sensitive, but I haven't tried it.)

Before you decide about buying the radio, I suggest you find a store with one on display, and play with it for a few minutes. You might like it.

Even when it might be acceptable to post auction and for sale listings
in a non-sales newsgroup, is it really essential to send hourly
updates to people who are not interested enough to follow up on the
original posting?

Newsgroups may have a purpose beside advertising things readily looked
up on eBay by those interested.

Happy trails,
Gary (net.yogi.bear)

<< We have put together a dipole, each leg is 66 feet. >>

Bob-

The feedpoint of a halfwave dipole in free space is about 72 Ohms, which would result in 1.44 to 1 SWR. A real-world dipole sill be a little different, and it might be possible to trim it close to 1 to 1.

Your dipole is about halfwave on the 80m band, so it should work there. However, it is a full wave on the 40m band, two waves on 20m, three waves on 15m, 4 waves on 10m. The input of a full wave antenna (and presumably multiples of a full wave) is extremely high. It might be higher than your tuner can match.

The best transmission line may be some kind of balanced open wire feeder, but you still would have a high impedance to match. One of the old Viking Matchbox tuners may be capable of matching it without using a BalUn, but changing to a balance feedline might be all you need to do.

Another alternative is to use a "Trap Dipole" that has parallel-tuned traps at the ends of the 40m sections. Such a dipole is often shorter on 80m due to the trap's inductive loading. There are some versions that may have additional traps for higher frequencies, but just adding the 40m set may make it tuneable on the other bands. I have one with just the 40m traps that came with a balun in the center, that worked "OK" on 80m through 10m using a tuner. (It is twenty years old now, so may not be working as well as it used to.)

> Would we be better without that balun?

No, it's 1:1.
>
> Is the fact that the dipole is still too low and close to the guy wires (

That can mess things up, for sure.
>
> Any suggestions please??

#1, feeding an all band dipole with coax is a mistake. Your feed
losses will be very high on most all other bands, except 80. If you
want to use it for all bands with a tuner, you would be better off
feeding it with ladder line, or twin lead. MK

After re-reading the manual (and an hour or two of net surfing) it turns out the reference frequency is tweakable via the TT remote command set. More than ample adjustment to get it spot on.

(...I really have to learn to not read manuals when I'm over-tired. It was there in a table. No reference to the feature in the manual, but it was listed as a command none the less...)

Thanks to all who read my original post.

Pat

Hi all

I have it back up without the balun, and still have to use the coax for now. I am able to tune it now on all bands but I am sure there is a lot of power loss from the tuner. I grounded out all devices in the shack but still receiving a lot of RF interference on tv, computer, and home alarm.
Thanks for all the advice, really appreciate it.

Hi there,

Anyone have one of these? Ive just bought one with no manual. What aux antenna should I be using and where should the aux antenna be located in relation to my main antenna.

Secondly, what is the procedure for tuning the gain,phase1 and phase2 controls.

Mnay thanks, John G0WPA

## 2362. ft1880R problem

I have a Yeasu ft8100r dual band 2m /440 rig. I am having problems on the 2 meter side of the rig. When I depress the ptt I rig hangs in transmit. This does not happen on 440. Does anybody know why this might be happening.

Thanks

Chip

Hi people!

Read please this letter before will throw out it.
Forgive to me bad English language, I do not know the English language, I write in Russian, and translate the computer.
I am Peter, me 11 years. I live in a house - boarding school _ 3 of Moscow. One year ago I have got here. Father stole also him have put in prison when to me was 9 years, and mum after that became the alcoholic. She did not care at all of me, punished and beat, and me have taken away here, and to mum on me to spit, she here does not come at all. But tutors here good, they do not offend me, and speak that when I shall grow, I shall become the good and clever person. I have dream. I want to study in institute when I shall grow. But the big money, dollars are necessary for training, probably 5000 dollars, and at me they are not present, I of such money probably never shall see. Earn their work I can not and steal as daddy I do not want. To ask money other people in the street to me it is a shame, and I then will be taken away by policemens, and will expel from a boarding school. The senior friends who are able to address with the computer, have told me, that it is possible to send from the computer the letter on the Internet with the request to help, and that there is such program E-Gold on which it is possible to send dollars and euro. I have gone to computer club, there all have shown me how to use the Internet and the computer, and E-Gold, and have opened to me the account. I thought, that it is difficult, and it is completely not difficult, because I the sharp boy.
I ask you, please, send me money, for you - it is not enough 10-20 dollars, and I shall postpone this money and in 6 years shall go to study to institute and I shall bring advantage to people.
Please help me, do not leave me one in a trouble. May yours 10 dollars will rescue my destiny and I shall not become one more criminal and the drunkard.

Many thanks!

Sounds like you might have a little RF getting back into the keying
circuit, possibly as a result of an antenna failure of some type. Can
you duplicate the problem transmitting into a dummy load?

Another possibility that just occurred to me is the existence of a "one touch" PTT arrangement, where the mike needs two discrete presses of the PTT to switch into transmit then back out. What happens if you release the PTT then depress and release it again?

Message-ID: <yCjec.5419$k05.2790@newsread2.news.pas.earthlink.net>
Source record: 22071

I just purchased an Astron RS 35A to go along with my new TS 2000. I was getting some terrific line noise that I was attibuting to local line noise, until I hooked up the TS 830.

1. Totally takes out the 830 on 7 MHZ. Turn off the 2000, and noise disappears.
2. Noise on most bands -- not 60 hz but seems higher buzz. Probably 120 or so.
3. Discernable roughness on CW note monitored locally. Reports from others varies -- hard to know. 4. Tried another small power supply. Noise does not seem to exist with it.

I'll probably send it back, but anyone have similar problems?

KD0UN

Very nice condition CU-168, made by Gailbraith-Pilot Marine. Has been in daily use in my shack for the last 6 months or so. Good front panel, handles have some paint chips. Includes SO-239 to N-Connector adapters..

I want $80, plus shipping, approximately 50 lbs.. I will make sure that it is well-packed!

Well it as definately RF getting into the rig. I put the antenna on top of my car and the rig worked perfectly. Now, Since I plan to use this rig close to the antenna, how do I keep the rf out the rig?

I guess I will have to put in a steel tool box and keep the head outside of the rig.

Any other Ideas.

How well does it behave at its lowest power setting in your preferred
layout?

Can you reliably hit the repeater at that power?

Have you tried clipping ferrite beads to the power leads, any external
speaker leads, any control head/main body leads, and the mike cable?

That feature seems to be a common characteristic of Japanese manuals. I repaired a Kenwood 440 for a friend. Looked all over for instructions of how to set up one of the oscillators. Not mentioned in the index or anywhere in the text. Appeared as a note on the schematic. Only took a couple of extra hours to find it. Same manual lists every metric screw, nut and washer in painful detail. Why?

Thats not the problem. Most of the time I operating in
Red Cross Shelters and the Radio and antenna are going to be in close
proximity. Last year, I was at a shelter during a hurricane and the
antenna had to be indoors. In theses situations, I need High power to
get throught the walls of the shelters.

Any Ideas.

# 2377. Stolen Tower and Antenna - Las Vegas, NV - April 10, 2004

Newsgroup: rec.radio.amateur.equipment
Date: 2004-04-12 02:51:26 UTC
From: googlepost@massageglove.com
Message-ID: <a3b36c48.0404111851.2c90907@posting.google.com>
Source record: 22079

Stolen from 100 Ironwood Drive in Las Vegas, Nevada sometime between
April 10 and April 11, 2004:

Two sections Rohn 25G Tower
One Rohn 25G Top section
One Rohn Roof/Eve Mount

One Hy-Gain TH7-DX 10/15/20 Triband HF Beam

One Ham-IV Rotor

Two homemade sloper antennas

One 440MHz business band Yagi

All of this equipment was formerly owned by Alan Foster, KB7UI and
disassembled and purchased by Jason Creager, KC0ERG, before Al moved
to Yuma, Arizona this weekend.

There are several items missing from the complete package, so if you
hear of anything being "parted out" and think "That's odd. Why is THAT
missing?" please contact me as I can identify all of the stolen items
. If you know the whereabouts of this antenna, please contact me at:

StolenTower@cox.net

I'm really hoping that this was an honest mistake and that someone
picked up the gear from the hiding spot at the house to keep it from
being accidentally thrown away.

Please forward this message (in a nonannoying method :-) to any mail
reflectors for ham organizations in the Western United States.

Thanks very much,
Jason

> Any Ideas.

There's more than one way to reduce the level of stray RF inside the case.

If you're using an omnidirectional vertical, you'll have a null on the radiating element's axis. If you can elevate the antenna that should help. If you can achieve some measure of horizontal separation as well, that will also help. The ferrite beads won't be wasted either, as they will add a lot of loss to the RF flowing down the power line and the microphone cable without affecting the DC current or the audio tones.

And if push comes to shove, there's always the steel toolbox to fall back on.

Hi George,

This was also an American specialty from the likes of Intel in the
late seventies. If there was any important feature deserving mention,
such was done "somewhere" - once.

Try to get teh AUX antenna as far away from your main antenna as possible: I use a 12.5m wire fed via a 9:1 Un-Un in my attic.

I'd suggest setting the gain to about 3/4 open, then I'm afraid it's a question of fiddling with the controls ONE AT A TIME until you minimise the interference. Tuning can be quite sharp!

And just in case you kill it by applying HF at the wrong moment: the FETs are J310s...

I don't think you said what kind of antenna you are using. If using a magnet mount antenna why don't you just extend the coax length by 10 or 15 feet with RG-58X coax and put the antenna on some sort of metal sheet, tin cookie sheet or a metal filing cabinet or something like that. At that distance the antenna should be far enough away to stop the problem. Also, this shelter you spoke of, I can't see the walls being a problem for RF getting out although high power would is best for longer distance.
Good Luck

I'll be damned! The answer is "Yes!". (I was all prepared to answer
in the negative -- until I went and checked the installation in the
car.) The "north" end of the cable _does_ slip into and snap-locks on
the "south" end of the cable.

Now -- whether or not you'll experience `weird` operations from
using a too-long cable run, well....

I would assume that Icom only warrantees operation up to the length
of the single, longest run cable they offer (approx 12-15 feet?)

Yep, scrap is getting good money. Last Feb copper was around $4/lb.
Material prices are going up.

I did it in a station wagon for 4 years with no trrouble. The Icom people
swore it would not work. Any guesses as to why they said that? LOL!

OF COURSE!!!! They wanted to sell me the longer cable.

Those are some manly loading coils...Would hate to see the price of
those in todays $$$$...I've seen that mobile somewhere before...Maybe
in an old QST or something...But somewhere I think I have an article
about that car. Was he into civil defense or something like that?
Seems to ring a vaque bell...Seems like in the article, the car was
mainly set up for emergency CD use...MK

Lee was shall we say, a little different. He was trained as an
engineer and I believe spent some time in the Coast Guard before his
dad died and left him a very substantial trust fund income. At this
point, he "retired" to pursue other interests, as they say.

He was a neighbor of ours (my parents and me), why I do not know,
since he was very well off and we definitely were not. The properties
were suburban and measured one acre, but his had a power line that was
very noisy. Instead of moving, he built the mobile. It wasn't for
emergency use so much as for DXing. I think it was on the cover of CQ
magazine, but I couldn't afford subscriptions in those days so I'm not

sure.

His home station was the classic setup of a master exciter, modulator and power supply with individual amplifiers for each band. These were p-p 304TLs, high level modulated. All of this stuff was in a series of 6-foot rack cabinets built into a wall with access from the rear and a huge horseshoe shaped operating console in the middle of the room.

Receivers were always the latest of whatever was perceived as the best. His castaways were always donated to the VA hospital radio club so he could take a tax write-off. I tried to weasel things out of him but he always said that until I became a non-profit charity I was SOL. [g]

Since he couldn't hear anything, he became an ARRL Official Bulletin Station and would relay ARRL messages on a published schedule. I helped install his 80-40 meter vertical. This was fed with nitrogen-filled rigid coax. I did the grunt work installing the radial system; spending a couple of days driving ground rods at the end of each of about 60 radials and stretching out the wire. These were laid on the ground and then a landscaper was called in to cover them with topsoil. My "pay" was a 30' aluminum tower that I picked up and carried the block or so to my house. I was about 16 at the time.

When Collins came out with the noise blanker for the 75A-4, he could finally hear from the home location. He had a Telrex "Christmas tree" stack and a four-square for 40 meters, plus the other vertical. When SSB got more popular he scrapped the AM amplifiers and bought five Collins 32S-1's and five Gonset GSB-201 amplifiers for the OBS station. Of course, he had the requisite KWS-1 as well.

The mobile went to SSB at an early date as well with a Technical Material Corp SSB generator driving the 4-1000A.

There is another interesting story about the BOCAR sports car that he bought but that will keep for another day.

Wes

Many Thanks Igor,

This is exactly what i will do too.
One more question, if I may?
To transmit, do I need to feed 12v to the remote socket to switch it out? Im presuming the unit is not RF sensing.

Thanks again,

John, G0WPA

I have the following items for sale. Prices do not include shipping. I will ship overseas.

Allied Radio Model 2509 Short Wave Receiver.....$60 plus shipping
This is a solid state 5 band short wave receiver that covers the AM broadcast band, and the following short wave bands:

* 5.9-6.25 MHz
* 9.45-9.85 MHz
* 11.45 - 12 MHz
* 15.05-15.55 MHz

This radio is in excellent condition and sounds great on all of the bands. I found it to be quite sensitive even with the whip antenna that is attached. The radio will run on both ac and 12 volts DC. Includes the original manual.
http://members.cox.net/radiostuff9/allied_sw.jpg
http://members.cox.net/radiostuff9/allied_sw2.jpg

Electrovoice Model 623 Microphone - New in box.....$135 plus shipping
This is a Hi-Z dynamic mike with instructions and cable.
http://members.cox.net/radiostuff9/ev623_mike2.jpg
http://members.cox.net/radiostuff9/ev623_mike.jpg
http://members.cox.net/radiostuff9/ev623_mike3.jpg
http://members.cox.net/radiostuff9/ev623_mike4.jpg

Turner S22X Crystal Microphone.....$35 plus shipping
The unit has been tested and works. Cosmetically it has pitting but has been polished up and presents itself quite well!
http://members.cox.net/radiostuff9/mike.jpg
http://members.cox.net/radiostuff9/mike2.jpg
http://members.cox.net/radiostuff9/mike3.jpg

Eico 249 VTVM.....$30 plus shipping
Clean and working unit with a nice large easy to read meter. Meter has a small crack on the lower left side and their is a scuff across the meter face. No probes but has a connector so you can build your own. Includes a photocopy of the manual
http://members.cox.net/radiostuff9/eico249.jpg

Weston Model 904 Precision AC Voltmeter....$40 plus shipping
This meter measures 0-750 volts and the ranges are changed by making the appropriate connections on the top of the meter. The ranges are: 3, 7.5,

15, 30, 75, 150, 300 and 750 volts. This is a working unit in excellent condition.
http://members.cox.net/radiostuff9/ac_voltmeter.jpg
http://members.cox.net/radiostuff9/ac_voltmeter2.jpg

Westinghouse AC Voltmeter.....$35 plus shipping
This meter in a heavy bakelite measures 0-150 volts and the ranges are changed by making the appropriate connections to the meter. The ranges are: 1, 5, 15 and 150 volts. This is a working unit in nice condition.
http://members.cox.net/radiostuff9 west_meter2.jpg
http://members.cox.net/radiostuff9 west_meter.jpg

Precision Apparatus Series 85 VOM.....$25 plus shipping
Vintage well built VOM. Tested and working.
http://members.cox.net/radiostuff9/series852.jpg
http://members.cox.net/radiostuff9/series85.jpg

William Nye Speed-Ex Telegraph Key.....$35 plus shipping
http://members.cox.net/radiostuff9/nye_key.jpg

Speed-Ex Brass Telegraph Key.....$25 plus shipping
http://members.cox.net/radiostuff9/key99.jpg

Winslow Telegraph Key.....$25 plus shipping
http://members.cox.net/radiostuff9/winslow_key.jpg

Brown Portable Potentiometer - Honeywell Artifact.....$40 plus shipping
This was made by Minneapolis Honeywell in Philadelphia. Never knew they were in Philadelphia so this must be pretty old! I would guess that this is from the 1920's or 1930's. According to the instruction card, "this instrument is for checking potentiometers and thermocouples. It can also be used for checking millivoltmeters and other sources of electromotive force within its range. The range of this instrument is 0-71 millivolts DC." The instrument itself appears to be in excellent condition. The instruction card does have a water stain and and leather handle is coming apart.
http://members.cox.net/radiostuff9/honeywell_artifact.jpg
http://members.cox.net/radiostuff9/honeywell_artifact2.jpg
http://members.cox.net/radiostuff9/honeywell_artifact3.jpg

VHF Probe Detector - RF Labs Boonton, NJ.....$40 plus shipping
This is a piece of vintage test equipment, a VHF Probe Detector made by Radio Frequency Labs of Boonton, NJ. According to the enclosed data sheets, this was made in 1950. This unit covers 70-150 MHz. Includes the meter, all attachments and the wooden case. The original factory calibration sheets filled out by hand and dated November 1950 are still in the case. All appear to be in very good condition.
http://members.cox.net/radiostuff9/vhf_detector1.jpg
http://members.cox.net/radiostuff9/vhf_detector2.jpg
http://members.cox.net/radiostuff9/vhf_detector3.jpg
http://members.cox.net/radiostuff9/vhf_detector4.jpg

http://members.cox.net/radiostuff9/vhf_detector5.jpg
http://members.cox.net/radiostuff9/vhf_detector6.jpg

McMurdo Silver Model 900 VOMAX VTVM with RF probe...$20 plus shipping
This is from the 1940's and an interesting piece if you collect McMurdo Silver equipment. Includes a copy of the manual. This unit is untested.
http://members.cox.net/radiostuff9/silver_vomax.jpg

Thanks for looking.

No I was there and experienced the ire of many customers who tried to
snap two cables together. More times than I care to remember it did
not work reliably. The voltage drop through the two cables seemed to
be to great. So we went to telling callers it would not work. Once we
at Icom would have said it works then we bought that configuration. It
was easier to say your were on your own when the snapping two cables
together question came up. Even the longer cable is not as long as the
two shorter ones connected together.

## 2398. Receivers grounding out

Newsgroup: rec.radio.amateur.equipment
Date: 2004-04-13 03:33:19 UTC
From: K4JDP@webtv.net
Message-ID: <25051-407B5F7F-179@storefull-3172.bay.webtv.net>
Source record: 22000

I have an R-2000 and 830S by Kenwood.
Both radios do not receive when plugging in coax connectors into the S0-239 receptacles. I've eliminated the cables as the problem. I believe it is possible salt air corrosion internally in both radios. The signals and noise drop out completely when screwing in the PL-259 connectors all the way in and tightening them down. When they are only half way plugged in I get normal reception when wiggling the cable but they are not screwed in completely and not making a good electrical connection. I lived on the beach and sometimes would open the windows for ocean breezes. The 830S was right next to the open window and the R-2000 was sitting on a night table a few feet away from the open windows. I've eliminated the cables themselves and suspect salt air corrosion internally in both radios.

Is there a spray contact/solder connection cleaner available on the market that might help solve this problem?

Recently I had the S0-239 replaced onthe 830S and still have the same reception problem. The noise and signals drop out completely in both radios when screwing in the coax connectors (PL-259) completely.

Thanks for the help!

It sure looks familiar. Mainly the old mercury wagon, and the way the gear was set up. It's possible the article mentioned dxing, or maybe even field day use, but can't remember..But I do remember he set it up to be multi-op, with people at different radios. Maybe that would ring a bell...Of course, it's possible that there was someone else with the same type setup...But that car sure looks familiar...It's hard for me to check the issues, as I have them packed away in a closet, but if I run across it, and it's the same guy, I'll scan it for you.
I've got many issues of old qst's and CQ's, etc the oldest going back into the 30's. Loads of them for the late 40's and 50's. It was a 50's issue I'm sure, with that car...MK

I've always wanted to make my own cable, but need the end
connectors...Could probably make 30 cables for what they charge for
one...The only thing I could think of that would cause a problem is
the ground connection. Supposably it has a screw that tightens the
ground when you install it. I would make sure the ground connects
between the two cables, so it connects to the radio. It may do this by
design if they plug together...Haven't seen one...MK

I know that you have checked out the cables, but it does sound like it could be a problem at the antenna end if it is not the the cables themselves. The fact that you can receive signals when the plug end is only halfway in illustrates the fact that the receivers are probably working properly. Could be a short to ground at the entenna end. I am assuming that when you checked the cables you did do an end to end check with an Ohmmeter, both for continuity and for center conductor to the ground shell for a short circuit.

Another thing you could try is to throw some ferrites on the microphone cord.....the kind that are placed on power cords to prevent RF from getting into equipment. This might work if the RF is being picked up by your mic cord.
If you have an RF problem because of inadequate decoupling causing RF on the shield of your feedline, that is another problem.

If you could find it I would love to see it.

The car was something else. He bought it new from the local
Lincoln-Mercury dealer and when it wouldn't pull the load he had them
yank the engine and hot rod it. Of course what he needed was more
torque and they stuffed a bigger cam and multiple carbs in it, etc. so
it was actually worse. He then had a '56 Lincoln engine installed.
This had to have cost a relative fortune.

He had truck tires on the rear and extra leaves in the springs,
especially the right side where the pole pig transformer resided.

Like another poster said, this is a symptom of an antenna/cable problem.
Take a piece of wire, and wad one end up and jan it into the center of
the SO-239. I bet both radios receive just fine. When my best antenna's
coax filled up with water after cracking due to old age/sun damage, it
cut the signal by at least 90% with the connector's shell connected, but
with just the center pin connected, it worked fairly well, for recieve.

I would be willing to bet a good amount of money there is nothing really
wrong with yuor radios..

If it receives with the PL259 partially plugged in, how can the connector be
shorted? This a classic case of a shorted connector/cable/antenna.

# 2406. Hammarlund CB-23: need crystals

Newsgroup: rec.radio.amateur.equipment
Date: 2004-04-13 12:54:19 UTC
From: k5dh@raytheon.com
Message-ID: <%pRec.1$od.0@dfw-service2.ext.ray.com>
Source record: 22008
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.boatanchors,rec.radio.cb

I'm almost finished restoring a 1960s Hammarlund CB-23 base station. The date code on some of the parts indicates the set was built in 1963 (or at least those parts were made in '63). I need 3 crystals to complete the electrical restoration:

Y106 = 25.335 MHz
Y109 = 25.375 MHz
Y110 = 25.385 MHz

I'll buy a whole parts rig if I have to, but I'd prefer to buy just those crystals.

And yes, I'm aware of the multitude of crystal houses out there, and I've done business with most of them over the years. I'm trying to keep the cost down. If I buy them new, those three little rocks will cost me $45 to $60!

Y'all need to work on reading comprehension when you get back from spring break. There are better rigs than the FT-90, some even made by Yaesu, but they are TOO BIG! A TM-G707A is 1.6 inches wider, a half inch thicker and over 2 inches longer than a FT-90!! If space weren't a problem I'd opt for full power rigs like ICOM's IC-208H that offers a full 50 W on 70CM or one of YAESU's true dual banders, or whatever; but it is so ....

Regards, K3DWW

Turns out that was the case. Luckily it was just a good intending ham
operating on the best information he had available to him at the time.

The missing equipment is now at its new QTH awaiting installation. Now
I just need a good radio to power it! :-)

They're the small holders with wire leads (as opposed to
plug-in pins). HC-18/U, I think (or is it HC-25/U?)

With a 25 MHz operating frequency, I'm going to assume
they are 3rd overtone.

73,
Dean K5DH

Unit is not cellular blocked as US versions are
Selling ICOM IC-PCR1000 Computer controlled reciver.
I've used the unit less then 10 times.
in mint condition. Original box and manual and accessories.
specs are below or full specs at:

http://www.icomamerica.com/receivers/pc/icpcr1000main.asp

Email netimports@msn.com first one in gets it.

Selling for $300US / Located in Canada , Toronto
email me if interested. Will ship to anywhere

Bob

Specs:

Frequency Coverage (MHz):
0.010000 - 823.999999
849.000001 - 868.999999
894.000001 - 1300.000
NO CELL BLOCK
Mode: WFM, FM, AM, SSB, CW
Number of Memory Channels: 1000 channels per file (number of files created is up to the user)
Antenna Connector: BNC (50 ohm)
Useable Temperature range: 0° C to +50° C; 32° F to 122° F
Frequency Stability: ±3ppm at 1300 MHz
Frequency Resolution: 1Hz (minimum)
Power Supply Requirements (negative ground): 13.8 V DC = ±15% for receiver unit or supplied AC adaptor
Current Drain:
Power ON: (PC Power Off) 0.1 A
Max. Audio: 0.7 A
Standby (squelched): 0.6 A
Dimensions (projections not included):
126(w) x 30(h) x 199(d) mm
5(w) x 1.2(h) x 7.9(d) in
Weight: approx 1 kg
2 lb, 3 oz

Sorry to report that I can't find them! I thought I had several small
drawers with CB crystals of various frequencies. They may be around
here somewhere. I spent about an hour looking for them but no luck.

I will look some more when I get a chance.

## 2426. Yaesu gets on bandwagon, but Kenwood?

Newsgroup: rec.radio.amateur.equipment
Date: 2004-04-14 01:06:52 UTC
From: ham4awhile@aol.com
Message-ID: <20040413210652.00392.00000382@mb-m29.aol.com>
Source record: 22028

Ten Tec started it with the Orion introducing it but not having it available for almost two years. Icom got on the bandwagon last year at Hamvention with their IC-7800 which may or may not be availble any day now. Yaesu just introduced their unavailable FT-DX-9000. But what I want to know is when is Kenwood going to get on the bandwagon and announce a radio that isn't going to be available?!

Might be interested if the price was $225 CDN. (which would be the base price if it was sold at $300.00 U.S.)

Note to Canadians:

Never buy from a fellow Canadian offering his own stuff in U.S. dollars. A person is making an additional 26% (because of the exchange) despite taking the cheque to the Royal Bank, Toronto Dominion, etc. and depositing it in his own chequing account. Insist on a Candian dollar price. There'sno need for the seller to insist on U.S.dollars on things
that would be sold to a Canadian and sent to a Canadian postal coded address..

Buying from someone in the United States and paying U.S. prices is perfectly okay, but someone from Canada insisting on
a U.S. price for his own things located here in Canada to a Canadian living in Canada is a bit of skimming off the top in my view. Not a bad way to legally make an extra 26% off the price of goods.

Since this was xposted, I will ask all three (sorry for wasting
bandwidth).
Question - is it high or low impedance - will it work with the older
tube type stuff, or just the modern dynamic mic type impedances?

Definately check the cap connections, also check to see that the case cover screws have at least one external tooth lockwasher to bite through the paint on both the cover and chassis to ensure a good ground connection for the cover itself. Sometimes there isn't a good bond, so you have essentially an unshielded power supply.

Use the usual techniques to reply via email.

>
>W4OP
>
Could be the connector in the radio itself, the center pin connection
could have been enlarged by a poorly soldered PL259, thus expanding
the fingers in the connector. Had this problem on a Yaesu 757GX,
squeezed the fingers in via a knife blade, no further problems.
Always check the center conductor for solder on the outside of the
plug, it changes the diameter and can mess it up for future cables
that are correctly assembled. YMMV

# 2431. alinco DX-70t transmitter problem

Newsgroup: rec.radio.amateur.equipment
Date: 2004-04-14 04:53:04 UTC
From: Jeremy Salch <salchNOSPAM@tblx.net>
Message-ID: <c5ig4n$21pao$2@ID-225834.news.uni-berlin.de>
Source record: 22033

I have a alinco DX-70T that got indirectly hit with some lightning, It wasn't disconnected during a lightning storm and the antenna was large enough it picked up enough static electricity out of the air from the lightning that it fried something in the radio. So the radio was still in warranty so I sent it in to get it fixed and I was told there was a small SMT diode that was zapped. So they fixed that and sent it back to me. At the time i was only operating on 160,80,40 and so i didn't really check it out on the other bands, but it appeared to work great on those bands. Later on, once the warranty was good and expired i started branching out into 20,17,15,12 meters only to discover it doesn't work on them. It appears to receive just fine, but the transmitter goes crazy.

To explain it does the following:

without any good test equipment the following description is the best i can do.

on 17m sometimes it will appear to work fine, but during transmitting SSB, the display will blank out the frequency until I unkey and it will quit transmitting, on 15 and 12 the best i can describe it is it must not be putting out a 50Ohm load, I hooked it up to a automatic tuner that I verified worked on the antenna and the frequency with another radio and with the alinco the tuner just tuned around forever and never could decide. Also with a swr bridge it would show to have a very high SWR and the SWR would fluctuate while transmitting on those frequencies.

Once i get up to 10 Meters is appears to start working again, but i'm not too confident in it.

Any ideas i'd love, i opened the thing looking for anything black and coudln't visually see anything "BAD" but there is soo much SMT stuff in there i dont have a clue where to start in this thing.

Saw this forsale a few days ago at the American Science and Surplus store in Milwaukee. Looks like a perfed tape code practice machine, I guess from the 1930's. Appears to be in good shape, 4 tapes included. I forget exactly how much they wanted, but I think it was < $50.

FWIW.

Try your local CB shop and see... there are a lot of them out there.
Ask around at a nearby truckstop and they'll tell you who does that
stuff.

Most of those guys probably have an old 23 channel solid state rig in
the parts bin somewhere that they'll give you to cannibalize for crystals.

Possibly, but sometime around the great trucker phenomenon, the crystal
manufacturers weren't able to keep up with the demand for CB crystals,
and so the synthesized 23 channel CB was born. You will need to find
a CB that was built earlier than about 1975.

I haven't seen a "local CB shop" since about 1975. I must hang out in
the wrong circles. I wasn't aware that anyone tried to make a living
fixing CB's anymore.

I have a couple drawers full of CB crystals. Whether I have any for the radio listed, I'm not sure. I'm not familiar with that particular model. But I can test all crystals sold for operation prior to shipping - as I have 2 different testers. What I will NOT do, is guarantee them once plugged in. "I" do not guarantee electrical parts unless "I" personally insert them. ALL are $7.50 EACH plus any shipping. Payments via Postal MO or Pay Pal.

Lou

--
Inventory clearance/Spring cleaning - Radio Shop (business), ham shack and house. Preparing to move to new location. I have a list of things for sale. NOS/New/Used, Parts, radio accessories, etc. All are AS IS. Interested? E-Mail me.

2 businesses in same building - Electronics: Sell battery packs, antennas, coax, hard-line, etc. Do Radio Repairs, FCC License assistance and exams. Gift Shop: Gift items. Do Fund Raiser programs.

Tune to the lower part of the 10M band and you'll hear plenty of them advertising. There's one that is on rt. 295 in Virginia that can be heard all over the 6M band with their every-fifteen-minute advertising message which the broadcast on channel 19 with some sort of mistuned bandsplatter machine.

I think most of these shops make their money from installation and modification work more than repair work, but there are quite a few around. Not like during the CB craze of the seventies at all, but check your local truckstop.

Hi Guys,

I would be very surprised if you could find the crystals
I need in anything other than the Hammarlund CB-23 (or
the identical Lafayette model that Hammarlund made for
them). The CB-23 used a rather unique scheme of crystal
mixing that I've never seen in any other radio (and I've
been tinkering with CB gear since 1971). The frequencies
I need are:

Y106 = 25.335 MHz
Y109 = 25.375 MHz
Y110 = 25.385 MHz

I'm assuming that they are 3rd overtone crystals, since
most crystals above 20 MHz are.

The holder type is HC-18/U (the small holder with solder
leads as opposed to pins).

Thanks and 73,
Dean K5DH

Hi John,

If yours is like mine, you'll find two RCA sockets on the back of the
gadget. One is for 12v power, the other is connected to your rig's PTT
so that the power to the amplifier stage is cut off when transmitting
- that's how I found out that the FETs are J310s :-( Looking at it
from the rear the socket on the left is connected to PTT, the one
closest to the PL259s is 12V power.

I hope that helps.

# 2450. question about alinco dj 596 wide option

Newsgroup: rec.radio.amateur.equipment
Date: 2004-04-15 22:26:57 UTC
From: xon <cimv@haalweg-mail.com>
Message-ID: <P_Dfc.87713$1q2.184837@zonnet-reader-1>
Source record: 21952

Hi Everyone,

I was wondering something. My alinco dj 596 had got the function "Wide Fm".

When I think of wide FM I think of the commercial radio or a wireless microphone but what does the WFM mean on my handheld alinco? If I listen on a receiver that can receive Wide Fm like normal "radio" I don't hear much diffirents maybe it's the microphone.

So my question is..if I connect a normal microphone to the external microphone input and put it on wide Fm is the audio quality better if you listen it on a Wide fm Receiver?

Many thanks for you anwsers already

You are right, and that explains my point.

Let's go through the exercise.

If I took his $300 US base price that he insists on, that would equal $404.16 CDN. $300 U.S. x 1.3472 exchange = $404.16 CDN. In other words I would pay out $404.16 CDN to meet his $300.00 US price. That is to say, that would be the transaction to process a bank draft in U.S. funds (fee extra)

So why would anyone in Canada spend an extra $104.16 for a transaction that really should be $300.00 CDN
or perhaps less (perhaps a Canadian dollar price to Canadians? I wouldn't, simply because there is no real foriegn money required (he lives in Canada, not the United States and there fore does not take any financial penalty to convert the transaction from U.S. dollars to Canadian ones for depositing in his ordinary chequeing account.

I'm aware the US Dollar is worth more than ours, so why is he insisting on a U.S.price for Canadians as well?
I've seen this happen in hobby meets attended by Canadians in the U.S. when they want to sell to Canadians
(I mean really let's be a bit Canadian here, fellas!)

Why would a Canadian pay out $404.16 CDN to meet a $300.00 U.S. price? When he could just as easily say
it's also $300.00 CDN.? (and save us $104.16?). I've said to some collectors, I can buy the same thing at home at the same price in Canadian dollars, so why buy in U.S.dollars when at the end of the day we're both checking in at Canada Customs
on our way home to Canada?

Simple: $104.16. That for domestic transactions (as opposed to cross border transactions) doesn't need to exist.

If he says he has a U.S. account at the bank, well let him manage it with his own money, not mine.

Not a bad way to make an extra $104.16 on the deal if a Canadian buys it.

Just my two cents U.S. (three cents Canadian at current exchange)

PK

It sounds like the rectifier diodes in you power supply radiating that
noise. Usually, this type of noise decays pretty rapidly above 600kHz, but
this supply could be using very fast diodes. Connect .01uF caps across each
diode and
(more importantly) bypass each leg of the SECONDARY of the power transformer
to ground with .1uF non-polarized capacitors. This will knock out that
noise, allowing the receiver to be usable down to about 250kHz. If you want
to tune lower than that, increase the value to .47uF.

Hello guys,
only 1 minute of your time.....thanks!

I have the pleasure to introduce this accessory
to all DRAKE lovers: DDS-4

It is a modern DDS VFO with nice features and full plug and play.
You can see this toy at http://www.cqdx.it/woodbox/dds4-index.html

It has been planned from I0CG and assembled by me IK3VIG in nice
DRAKE's design handcraft box.

We offer it to hamradio comunity with experience, professionality and
support even we are handcraftmans.

Thanks again for your attention and sorry for your time.

The instrument maker is a bloke in Nottingham. He's a radio ham, sadly a g7 who took the multiple guess exam.

He has made all sorts of stuff engineering wise. I've known him since he started makng different musical instruments.
A copy of a dobro metal guitar in stainless steel (he used two stainless steel sinks and soldering/welding (out of my depth here) the stainless was problem getting the right flux). Being the pedantic everything got to be right kind of bloke, (I'm a try this does it work , yes that'll do ) He experimented with trying to put a transducer/pickup to amplfy the thing.

He bought some really expensive transducers and i loaned him one that was from maplins for 99p. There are two miracles here
1 it worked brilliantly
2 Maplins had some in stock.

I enjoy trying to play music but i have van goffs ear for music. (and stevie wonders eye for spelling)

Keep the good work.

Regards Ron

I chose the Yaesu VX-5R because it was *almost* the broadest... the VX-7R was, by my standards, but the audio quality suffered. Since then, I found if you open the shell and remove the waterproofing disk (which allowed Yaesu to demo 7s in an aquarium tank at the last Hamvention), the audio quality is much better.

The 7 adds corner bumpers to the case design of the 5, and the 5 has withstood two years of abuse at my hands, so if

- transmitting on 6m, 2m, 1.25m (300mw only, sorry) and 70cm

- dual receive

- receive 0.5-999mHz
(729-800 and cellular blocked in US, cellular blocked for non-US version)

are of interest, I would consider the VX-7R.
http://www.yaesu.com/indexVS.cfm?cmd=DisplayProducts&ProdCatID=111&encProdID=GcixovTmTQk%3D&DivisionID=65&isArchived=0

But, how do you define 'broadest' and 'best'? If you have specifics, it could help us understand better what you want.

# 2466. Hearing Aids/ RF Emmissions

Newsgroup: rec.radio.amateur.equipment
Date: 2004-04-16 21:47:25 UTC
From: Bill Brannick <wmlb@sbcglobal.net>
Message-ID: <toj080hrgd2mvap2a5c4lhhencbm424ne3@4ax.com>
Source record: 21970

As another confirming moment in my life, next week I will be fitted for hearing aids.

I have already read articles that suggest that hearing aids and cell phones do not get along very well together. The so-called telecoil which is imbedded into the molding of the ear piece (one ear only) acts as a receptor for picking up audio from a conventional telephone..... but apparentely it can also pick up the RF from a cell phone generally resulting in a buzzing sound. The FCC has mandated that the manufacturers of cell phones must make available hearing aid compatible cell phones, but they have a couple more years to get that done. In the mean time, the apparent solution with respect to cell phones is to use a headset.

So.. if that telecoil can pick up RF from a cell phone, what is the potential for it picking up RF from my own HF transmissions here...(probably not all bands, but... )????

I suspect there are some older hams out there with hearing aids, who have the answers to these questions "right on top"

Bill, W6WLB

I have the Kenwood TH-F6A Played with my son's and couldn't resist.
Pretty much will receive anything, but don't know how it compares with the
VX-7R. Just don't expect a high performance front end. It is very
sensitive, but has pretty low third order...will die downtown Chicago.
- Tx on 2m, 222 & 440 == 0.05, 1 & 5W. all bands
- Dual Rx
- RX 0.100 MHz - 1300 MHz !
- AM full range, CW USB/LSB(below 470 MHz), FM(Above 27MHz),
WFM(Above 50MHz)
- 399 memories

I have the local VHF/UHF TV audio, FRS, AM & FM broadcast CB19, O'hare
Approach control, Unicom, WWV, CHU and the local 903 and 1296 beacons with,
of course, the local public service and good ole' ham repeaters. NO, it
doesn't do trunking (:-)
Take the battery off and hardly anything is left!

THIS is what they USED to call "General Coverage" not "wide band". To me
"wide band" is a description of the receiver filters, not the tuning range.
When was this re-defined???

>When was this re-defined???

The term got redifined when the marketeers were looking for a new way
to entice us potential buyers. To take your comment a step further,
the range of the TH-F6A is, in my thinking,"Extended Coverage" - but
then again, we both seem to be a step behind current definitions.

For my taste, the VX-5R wasn't the ticket as it didn't have 'full HF' coverage and in my area 220 is more useful than 6 meters. The added modes (sidebands & cw) were also an enticement as it allows me to monitor MIL air & other utes - though not with the duckie 8-} Didn't look at the VX-7R as the 220 is only 300 mw and frankly, I don't like the cosmetics - not saying it's a bad radio, just didn't fit my taste. If 220 isn't a concern and you feel the HF coverage on the VX-5R is sufficient my recommendation would be to save the $100 over the Kenwood. I own both Yaesu and Kenwood equipment and have no horror stories from either in terms of performance and durability.

My wife is deaf in the 200-2000 Hz band in both ears -- can't hear a
tornado siren, doorbell, phone ring, etc. Comes from playing viola in
a symphony orchestra for 15 years, just in front of the brass. But I
digress.

Her cell phone, a Nokia, has a place to plug a headset -- or an
inductive loop to drive the T-coil in her hearing aids. That works
_Very_ _Well_ _Indeed_ for her. The loop she uses also is Nokia,
though other vendors (deVilbiss, for instance) make them.

Hers just goes around her neck, plugs into the phone's headset jack,
and has a switch that she can press to end a conversation. Takes 3
hearing aid batteries if I remember correctly. Cost under $100.

But there _is_ some possibility of RF interference. I suspect it's not
much. I'm _sure_ the impedance of the T-coil in the aid is high enough
that it would be hard to couple much RF into it, but I've been wrong
before. Coupling audio in is a different matter, of course.

The telecoil doesn't really pick up RF from the phone. Digital phones cycle on and off in the audio range (teens of kHz) and it's the hash from the switching that the coils pick up. They're optimized for a fairly narrow freq range to match the passband of telephones. The old analog phones didn't have that problem (at least I never noticed it) on the same freqs and usually with migher power than the digital phones. I've never noticed any problems with RF in the HA's but the telecoils are sensitive to other fields, esp. from computer monitors or any other audio freq emitter (TV's, transformers, flourescent lights, some of those anti-theft thingies they have in stores that you have to walk thru, etc.).). I suppose if you worked really, really LF (<20kHz) you might have some issues but even then only when the coils are switched in (they're not active all the time...you have to switch them on). Actually, the cell phone I have now (Motorola) works fine without the telecoil, it's just kinda touchy where you have it positioned...you gotta get the phone speaker lined up with the mic on the HA. Also, Moto and Nokia make loop adapters that you wear around your neck and plug into the phone and couple with the telecoil...they work pretty well and get the phone away from the HA and make it kind of hands-free (I suppose they'd work with a radio if you wired up a little adapter...hmmm.....).

Be patient with your new HA's...you'll be overwhelmed with sound for a while...stuff you haven't heard for a long time. It takes a while to re-adjust. The world is a lot noisier place than you remember :-) It'll take a few visits to the audiologist to get them set up so be prepared to work with him/her. And if you're getting digitals, look into the noise reduction capabilities...it'll make the bands a little quieter...

Good luck...

73... Mark AA7TA

If you are looking to use cordless phones with inductive hearing aid pickup, 900 mhz cordless phones will work ok...the 1.2 or higher ghz will not do so well for you. I have been wearing hearing aids since I was little and the best bet for me is a cordless phone..in speakerphone mode..with the speaker built into the handset.

Have had my HA (digital) for a couple of years now and have never had a problem with cell phones. Also no problems with computer monitors, fluorescent lights or anything else for that matter. The telecoil works great with my cell phone, Nokia. In fact the older the phone the worse the performance. Some older desk and wall phones are so bad it is better if I take the hearing aid out and while using the phone.

I picked up one of the loop adapters from the audiologist and it is just about the neatest thing since sliced bread. Just plug it into the headset jack on the radio and you have the greatest set of headphones you have ever owned. You can adjust the volume on each separately and no one else can hear a thing. Also use an extension cable and can work on the computer while listening to the radio so that I don't miss anything. With the loop I do sometimes pick up stray noise, never have tried to sort out what it is. Could be lights, RF, any number of things but just not worth messing with, it is just not that bad.

I can say that my HA really gave me back ham radio. Was really getting tough to make out callsigns, etc. Had to continually crank up the volume when using headsets, etc. I have so much more fun on the radio since I got them I can't imagine not having them.

## 2477. Testing for power supply "hash"

Newsgroup: rec.radio.amateur.equipment
Date: 2004-04-17 07:17:08 UTC
From: Ken <cprstn54zz@att.net>
Message-ID: <k3m1809biv9cd8ui86kdfcig94hbrst76u@4ax.com>
Source record: 21978

I want to see if my new switching supply creates "hash" on any band.

Is it enough to hook up to a dummy load and listen to the difference
between battery power and the power supply in the middle of every band
of interest? Should I disable any controls or automatic adjustments?

What does hash sound like? I have been fortunate not to have
experienced it (to my knowledge).

Ken,

You'd be better off using an antenna just to check for radiated noise as well as conducted noise. You'll have to tune across each band because the hash might be frequency specific and/or broad band. Depending on a lot of factors, it can sound like a buzz, hum, variations due to load, etc. but if it's there, it will be easily recognizable as a "non-signal".

73s,

Evan

# 2488. Yahoo Group Dedicated to Finding Best Scanner/Radio Prices!

Newsgroup: rec.radio.amateur.equipment
Date: 2004-04-17 14:48:05 UTC
From: GeorgeF <av8tor@licensed4funREMOVEBEFOREFLIGHT.com>
Message-ID: <40814399.4050005@licensed4funREMOVEBEFOREFLIGHT.com>
Source record: 21990

Iï¿½ve just started a new Yahoo group called RadioPriceFinder. The purpose is to share information on who has the best prices for Scanner, SWL, Ham Radio equipment and accessories.

Are you in the market of buying a new Scanner? SW Receiver? Antenna? Then post a question to the group such as ï¿½who has the price on the new Uniden XYZ scannerï¿½. Hopefully others will respond with prices theyï¿½ve recently seen or paid online. This should save many hours of websurfing to find the lowest prices.

Have you made a purchase and received bad customer care from the business you dealt with? Please LET everyone know so we donï¿½t fall into the same trap and buy from a bad business.

For more information on this group or to join you can go here: http://groups.yahoo.com/group/radiopricefinder.

To scribe you can simply send an email to: radiopricefinder-subscribe@yahoogroups.com

Thanks,
George

HEY DUDE WHERE'S MY BUDDY!!!???
COME BACK HOME MICHAEL!!!

Ok Michael, you've had your realpolitik fling with ex-General Wesley Clark. Your endorsed Presidential candidate in the Democratic Primaries has withdrawn. It is time for you to come home, to join your buddies and resume your only genuine role which is that of defiance and resistance. Compliance and assistance with the Democrats does not accord with your past, your character, your bold writings and, most memorably, your long corrosive assaults on the Party that betrayed the working classes and plunged our country into corporate globalization. Remember, Michael, you're the flinty man from Flint, Michigan. You've never forgotten your roots. The heady Hollywood, Manhattan scene with the celebrities and Academy Awards have never gotten to your head but rather have gotten into your deserving pockets. How we all recall your standing before one billion people in Los Angeles at the televised Academy Awards in 2003 and, breaking the customary cant of the awardees, throwing the gauntlet down to George W. Bush and his "fictitious" war mongering.

Now the War has become a quagmire, with both Republicans and Democrats complicit (check the votes in Congress). The Draft may be on the way. So what are you doing going on the Al Franken Show very nearly breaking down when Al Gore (he of the pro NAFTA/GATT, anti-worker, regime-change, Iraq-bombing, lethal sanctions on half a million children Administration) called and thought you were apologizing. You have nothing to apologize for, Michael. Gore has a lot to apologize for-blowing the election he won in Florida and the country as a whole and for blowing, with Bill Clinton, the many opportunities the rich-booming Nineties and the collapse of the Soviet Union gave this country to turn a peace dividend into a pro-worker, pro-environment, pro-consumer and anti-poverty resurgence.

Come back and join our Presidential campaign, Michael. Talk to those "Reagan Democrats"-those 35% of union members who still vote Republican and against their own interests-as only you can. Michael, if you go pumping for the Democratic Party this year, just what are you going to say to the unemployed steelworkers near Sparrows Point in Maryland? To

the megathousands of laid off textile and furniture workers in North and South Carolina? To the abandoned auto workers waiting and waiting near their empty factories that went to repressive countries? To the millions of blue-collar workers, who fought our wars, only to learn that the two parties won't fight for their company pensions and health insurance? Are you going to tell them how the Democratic Party pushed through the WTO, let their pensions erode or disappear, were too busy collecting checks from the corporate bosses to pay attention to the corporate crime wave that looted and drained trillions of dollars from millions of workers, their retirement and small investments? Will you tell them that the cowardly Democrats, who couldn't win the fewer elections they are now not losing without the labor vote, won't even mount a determined drive to repeal the notorious, union-blocking Taft Hartley Act?

How can you be free to be what you are, or to depress Bush's vote, to jolt into consciousness the moribund Democratic Party?

Hey Dude, join your real buddies! The ones you may be thinking about just don't fit either your message, your vision, or our website VoteNader.org.

Come back home Michael. The workers and the youth of America are looking for you.

Best regards,
Ralph Nader

P.S. Will you put this invitation on your website and see how your fans react to Michael Moore returning to the Nader 2004 presidential campaign? Patti Smith will reserve a big singing spot, for you, on the stage for the customary finale, PEOPLE HAVE THE POWER.

Wednesday April 14, 2004

Join the Call for an Impeachment Inquiry of Bush and Cheney
Help us Get Congress to Take Action

You can help the call for an impeachment inquiry of President Bush and Vice President Dick Cheney. Sign our online Petition.

http://www.votenader.org/get_involved/impeach.php

George W. Bush and Dick Cheney should be impeached for two reasons:

They led the United States into an illegal, unconstitutional war in Iraq.
They misled the Congress and the American people with five falsehoods that led to war.

All it takes is one Member of the House of Representatives to call for an Impeachment Inquiry to start the process to investigate the two grounds. If the House then votes by a simple majority for Articles of Impeachment, the Senate would then undertake a trial of the President and Vice President. They would only be convicted, and impeached, if two-thirds of the Senate agrees.

Are you going to tell them how the Democratic Party pushed through the WTO, let their pensions erode or disappear, were too busy collecting checks from the corporate bosses to pay attention to the corporate crime wave that looted and drained trillions of dollars from millions of workers, their retirement and small investments? Will you tell them that the cowardly Democrats, who couldn't win the fewer elections they are now not losing without the labor vote, won't even mount a determined drive to repeal the notorious, union-blocking Taft Hartley Act?

How can you be free to be what you are, or to depress Bush's vote, to jolt into consciousness the moribund Democratic Party?

Hey Dude, join your real buddies! The ones you may be thinking about just don't fit either your message, your vision, or our website VoteNader.org.

Come back home Michael. The workers and the youth of America are looking for you.

Best regards,
Ralph Nader

P.S. Will you put this invitation on your website and see how your fans react to Michael Moore returning to the Nader 2004 presidential campaign? Patti Smith will reserve a big singing spot, for you, on the stage for the customary finale, PEOPLE HAVE THE POWER.

Wednesday April 14, 2004

Join the Call for an Impeachment Inquiry of Bush and Cheney
Help us Get Congress to Take Action

You can help the call for an impeachment inquiry of President Bush and Vice President Dick Cheney. Sign our online Petition.

http://www.votenader.org/get_involved/impeach.php

George W. Bush and Dick Cheney should be impeached for two reasons:

They led the United States into an illegal, unconstitutional war in Iraq.
They misled the Congress and the American people with five falsehoods that led to war.

All it takes is one Member of the House of Representatives to call for an Impeachment Inquiry to start the process to investigate the two grounds. If the House then votes by a simple majority for Articles of Impeachment, the Senate would then undertake a trial of the President and Vice President. They would only be convicted, and impeached, if two-thirds of the Senate agrees.

You might check the qst review of switching power supplies that
appeared 4 or 5 years ago. They tested for "hash." They found "hash"
was far less a problem when a transceiver was in the receive mode,
pulling few amps, versus the transmit mode, when hash was much more
serious, but a moot point, since the receive apparatus is muted.

I'm wondering if anyone can help me with this question, I'm getting ready to put to coax on my mobile system. I have 950 feet of Belden 9907 coax. It's 50 Ohm, low loss ethernet coax. Can It handle 75 watts from my Icom IC V-8000? Or should I opt for standard Mini 8U coax? Thanks for the feedback.

> radios asnd how to program them.

Those Midland radios require a Midland Proprietary programmer to program their EEProms. Also, the two 70-340 Midlands are VHF ( 136 - 174MHz) radios, I believe, while the five 70-050C radios are in the 40 - 50 MHz range; consequently the five won't be able to work with the other two.

Additionally, don't forget you need a licensed frequency to use even when you obtain ability to program those radios.

If you are only running a dozen or so feet in a mobile installation, or short run in base station, it will suffice. It is, in actuallity, a type of RG-58, and it has an approximate loss at 150MHz of about 5dB per 100 feet.

If, however, you are planning on long runs approaching 100 feet or more, you definately need to go to a lower loss cable, an RG-8 FOAM type, at least, if you want any appreciable amount of your 75 watts to reach the other end.

Possible, but what he is selling is used goods and would not equate the
$700.00 CDN price. The U.S.equivalent
would be $525.U.S. His price is $300.00 U.S., still not a bad deal.

But even at $300.00 U.S. he's still making an additional $104.16 off a
Canadian who buys it if he insists on a
$U.S. price for Canadians.

It still remains, why would a Canadian insist on a U.S. price to a fellow
Canadian if that is a firm price? Not a bad way to make an extra $104.16.
Cost of living up here is high enough as it is without someone profiteering
off the exchange on
the backs of fellow citizens.

Simply wouldn't do it myself.

Just my two cents (three cents Canadian at current exchange).

The noise generation from the power supply is more of an issue with
GSM and TDMA technologies. The GSM/TDMA handset transmits 217 bursts
of data per second, so the switching power supply has to ramp up for

the transmitter 217 times a second. The 217 Hz noise is more noticeable when the handset is located far from the cell tower and the transmitter is pumping out maximum power. CDMA does not pulse the transmitter and, therefore, should not have the buzzing problem.

Regards,
Ed Bailen - N5KZW

I guess an Extra should be able to figure it out. I would say it would be a lot of work to put UHF FM gear on 11 meters AM/SSB. Too much work in fact. Now if he was going to use them on GMRS FM I would say go for it BUT it would still be illegal as they won't be FCC type accepted. Get caught selling these things, lose your Ham ticket.

Model 10-0 $ 20
Sold as is, no manual.

Carver Audio Amp 95+%
Model M-2120
With Manual. $ 75

All Items Will include manuals, and any docs that I Have.

I have a lot of older computer parts/MOBS-CPUs/boards
ect. Everything from Rll,MFM to SCSII controllers.
contact me for what you are looking for.
I have an External Scsii CdRom changer that uses Pioneer
carts.

I also have a lot of C64's 3 good 3-5 fixable or parts.
Much peripherals - drives,printer,parallel/serial ports,
modems, tape drive, graphics pads, joysticks, ect.
AND a lot of cartidges, and software - games to productivity.
Included is all manuals, plus extra books for programming ect.
Included is software to run a bbs from the C64..
I would like to sell it all as one group. Will cost more,
if sold piecmeal....

$150 takes it all on the C64 equipment.

I will be at Dayton next month, so you can save on the shipping.
Contact me ahead of time for arrangements....

Shipping is NOT included

That doesn't make any sense. UHF gear is suited to the 400-600MHz
region. 11 meters is 27MHz. You would have to completely gut the
unit and replace all of the tuned circuits.

Besides, it is very ILLEGAL to run any non type accepted gear on the
11m CB band (unless the power is in the milliwatt region.. Even in
today's relaxed enforcement environment, running funny gear on 11m can
get your ham ticket pulled.

-Chuck Harris

OBTW, you are 18 days late for an april fools joke.

I use a Spectrum Analyzer and a few turns of wire at the end of some
coax to sniff the input/output cables and meter openings. Lacking that,
a portable SW receiver can be used to see if the noise floor increases
as you place the antenna near the power supply. I found the Astron
SS-30M does not radiate any detectable interference, while other
industrial switchers completely can trash out the HF band.

I seem to recall a "CB" class of operation IN the UHF region way back when.
Long before MURS and such came into play. Actually I think the new stuff
such as MURS replaced the UHF CB band. Maybe he is confusing the two bands?
IF NOT, WOW..... that is a task and a half. As others have stated,
legality will be out the window. Lou

There used to be something called Class A citizens band, which was AM modulation... I think on 460 MHz. There were a bunch of tube transmitters built for that band, most notably the Vocaline, and some of those can be sort of tweaked to kind of run on 440 MHz if you don't really care much about stability. A lot of them used bend-until-it-works capacitor and inductor technology.

I do not think this is a currently usable band. Although if it WERE currently usable, Fair Radio has a bunch of UHF AM aircraft transceivers for the military air band, which they are practically giving away right now. Not type-accepted of course...

>IF NOT, WOW..... that is a task and a half. As others have stated,
>legality will be out the window. Lou

The 11M crowd has never been one for worrying about legality. Which is kind of a shame since there's clearly a need being met there.

Hi OM,

Yes it would. It is against the law to sell Transmitters that are not
type-accepted for the band they are intended.

On the other hand, the Amateur radio service is the ONLY exception to
the rule. We CAN design, build, and operate non type-accepted gear.

On the third hand, the 11 Meter band is not Amateur radio service.
Even tho' we can work there, we must abide by all rules and
regulations for that service (all restrictions apply in spite of our
"privileges").

Thanks ED for the comments

Luckly we have a few radio amateurs in the parent group - the intention is to change the 050cs to the 6 meter band and the 340Bs to the 2M bands and use it for adhoc school trips.

Deon.

Quite right. Converting existing equipment to 11-meter use would
probably require individual certification of every unique piece or
type. Sure sounds expensive.

Issue 2: external power amplifiers are not allowed in the 11-meter
band... conversion of higher-powered UHF amps would not be legal.

Issue 3: equipment originally designed for UHF operation (1 meter and
shorter wavelengths) seems to me to be a less-than-wonderful choice
for conversion to 11-meter operation.

Issue 4: there's plenty of cheap 11-meter gear already on the market
(both legal-type-certificated, and outside-the-pale). Doesn't seem
like there'd be much of a [legal] market for converted UHF gear.

All in all, this idea sounds like a great way to lose lots of money,
and risk big fines and the loss of an amateur-radio license. As folks
may have noted, the FCC has recently raised their level of enforcement
against companies and individuals who have been playing loose-and-easy
with the rules about 11-meter operation and equipment sales.

The Armenian judges gave this a 9.8 on the Olympic Troll-O-Meter, but they were over-ruled by the umpires in instant replay, who award it a 1.4.

The Armenian judges lodged a formal protest!

It was sufficiently trollish, of course, but way too obvious. It was poorly written, poorly executed, and was so incredibly lame as to lack the true drawing power of a really masterful troll.

Maybe as high as a 1.6 for the intense stupidity of the premise, but a 9.8? Never!

The Armenian judges tear their hair out, throw their balalaikas down in dismay, and perform the traditional Armenian Dismay Chant!

They demand a recount!

I have an Alinco DM-330MV here and "hash" has not been a problem on any of the HF bands, nor do I hear any on the BC band. However, the supply does radiate some weak discrete signals on the 160 meter band, and they are considerably stronger on the AM Broadcast band. The supply includes a "noise offset" control, which allows you to alter the frequencies of the discrete signals and so move them out of the passband where they cause no problem. I once had an Astron 25 amp switching supply and don't recall having the problem with the discrete signals on 160 at all with that supply.

> >The telecoil doesn't really pick up RF from the phone.

The internal circuitry can pick up the RF as well and digital phones
*can* have a significant AM component. The coil wires can be simply like a
single wire picking up RF and feeding it inside the HA. When the TX is on,
RF is picked up and bias changes occur in some part of the circuit. When
the TX goes on-off, you have essentially square waves fed to the circuitry
at the pulse repitition frequency. Very small amounts of RF can be noticed
this way. The Nextel phone is the most noted since it has a distinctive
putt-putt (actually something like 10-20 HZ) which easily gets into computer
speaker amps.

> > Digital phones cycle on and off

As I said...

> > ... The old analog phones didn't have that problem ...

This is because in "analog cellular" the transmitter was FM and on
continuously. It had no AM cmponent. If RF was getting into some device
you would not notice it until it got strong enough and changed the bias on
something to cause distortion or bias some circuit out of operating range.
Small amounts of constant RF wouldn't effect things enough to notice.

No, the experimental service is also available for people who want to
run non-type-accepted equipment.

I _think_ there might still be a provision under Part 73 to allow broadcast
stations to operate non-type accepted transmitters under certain circumstances
if they can provide measurements that the equipment meets the standards of
the type requirement, and they affix a label to the equipment. I seem to
recall that it only applies to equipment built by the station itself. This
may have been removed from the rule book since I took my First Phone test.

I don't know, Hans, I just did a quick google search on WA3MOJ and he seems
to be quite the character. I'm not sure I would put anything past him.

I have a used mobile amp that my son can't use anymore since charlie came calling. I tried to warn him about the tvi to his apartment neighbors.

INTRUDER DRV-400 CB radio amplifier has 2/2sc2290's Driving 4/2sc2879's Transistors * 14V Output 700 Watts * 18V Output 1000 Watts.

I'll take $425 for it, shipped to your door. (cont. US)

>
I think the rules say "no more than 5 (or is it 10) copies of the same
design per year.
Manufacturers who want to make more than that *do* have to get
certificated. That's
what the FCC calls "type acceptance" nowadays.....

>
>On the third hand, the 11 Meter band is not Amateur radio service.

Well, there are several different allocations there. There's the
infamous CB band, and various
forest ranger, mil and other such where the "freebanders" operate
illegally.

Sad to say, the legitimate users of those latter bands are being driven
out by the FCC's refusal to do anything about the freebanders. God knows
that the auxiliary broadcast channels at 26 MHz are constantly being trashed.
I've had to move some government comms to 33 MHz where things are a bit
quieter.

well,
2 problems with that price:
1. its a USED amp
2. you can BUY a new one for less than that
<ok, more problems>
3. its a "Dirty" amp (most class C devices are)
4. it ain't legal under part 95 or part 97 (for the ham types).

basically, you got a lemmon there.

Very simple, go out a throw away the piece of crap of
amp you have and buy a nice Alpha and your problems will be
over! remember crap signal going in, even a worse
signal coming out!!!!!!!!!!!!!!

Over the last 8 years i've own this alpha i never a had flaw
or problem with this amp.
If your serious about amateur radio like i am, please go
out and buy yourself and nice equipment that you will be
proud to own!

gud luck, metal guy.

Joan:

Took a look at the schematic diagram (page 2-107) and the requirements are pretty basic. A 2N2222 or 2N3904 would probably do fine most of the time. You can even look at the TIP series or whatever you can get your hands on.

Nominal voltages show 10 ma through one and 46 ma through the other transistor. Worst case in a shorted output would draw 1.28 A. Input is from a +5 V regulator so voltage rating is a non-issue.

Hope that helps.....

Not entirely accurate... at least, not yet.

They have proposed rescinding the Part 97 rule which places a whole bunch of restrictions on the manufacture and sale of amplifiers which can be used between 24 MHz and 35 MHz (the 10- and 12-meter amateur bands, and the 11-meter CB band). This change has not actually been enacted - they're inviting comments on whether it's a Good Idea or a Bad Idea.

They have _not_ proposed making any change to the Part 95 rules, which currently make it illegal to actually _use_ any such amplifier with an 11-meter (CB) transmitter.

So - if their proposed rule change is adopted, it'll be easier for amateurs to buy amps that can be used on 10 and 12 meters. General-purpose HF-band amplifier designs will probably be revised, to "open them up" to the higher frequencies.

It will still remain illegal to use any such amplifier on the 11-meter CB band.

Whether this illegality will stop anyone... well, that's another question entirely!

I have an ic 718 and a laptop that i received from a friend. I used to do wacars with my scanner and was wondering if there was something that simple in amateur radio. To use a laptop with my radio, do I always have to have a tnc or some other peripheral or are there modes that just require a sound jack at the laptop and the radio?

Thanks

Well, first things first....Ya gotta give PSK31 a whirl.
In fact, to get started, you don't even need a hookup to your Icom.
The microphone built in to the laptop will work just fine!
That is, to receive. Which is fun enough to start with!!

It's quite common to do PSK31, conversational RTTY, PACTOR, MFSK, and
1200 bit/second AX.25 packet radio using a sound-card interface. The
basic pretty-good interface provides electrical isolation between the
PC and the radio... most commonly audio-transformer coupling for the
audio signals, and transistor or (better) optoisolated coupling for
the PTT.

http://www.packetradio.com is one source for such interfaces, and for
links to various software for Windows, Linux, etc.

hi!

thank you very much for your replay!

i am of the same opinion, the transistors ep 487 are not critical in
this biasing circuit.
the current rating behind a 1A 5V regulator is also not an issue :-)

i measured the hFE of the other one and found it to be only 22!
now i'm going to try out one of the transistors you suggested and check
for the bias.

cheers,

asta

There may actually be a market for converted UHF gear for CB. The key here
is CB, NOT 11 METERS. Some countries in Europe have FM CB. I don't know what
the frequencies are, but quite likely VHF or UHF.

Other than that, for anybody still reading this thread - ever hear of a non
amateur UHF SSB radio?

In general, this thread is in the same line as converting old black/white TVs to color.

since no one claiming to be wa3moj has disputed
the post,it stands to reason that it is a valid post.

I have sent a couple of e-mails to the F.C.C. pointing out that
he is selling illegal equipment. everyone else should send
e-mails to the F.C.C.
maybe we can get his ham ticket pulled.

# 2564. Need help hooking up frequency display to TRC-458 radio

Newsgroup: rec.radio.amateur.equipment
Date: 2004-04-20 13:53:08 UTC
From: 2LD751 <"2LD751 at COMCAST DOT NET">
Message-ID: <Xu6dnc-XWcbFthjdRVn-hA@comcast.com>
Source record: 21867
Cross-posted to: rec.radio.cb,rec.radio.amateur.equipment

I need a little assistance. I am hooking up a PDC-256 frequency display to a TRC-458 radio.

The instrutions state that you have to solder the input coax connector to a 51 ohm 1/4 watt resistor, then solder the other end of the resistor to a 15pf disc ceramic cap, then solder the unconnected end of the cap to the VCO output transformer. Can someone help me out as to where this is soldered in the TRC-458? The board is a Uniden board with the 858PLL in it.

Next, the directions state that I should solder the shield of the coax to a ground point adjacent to the VCO output transformer. Again, can someone give me an idea of what a ground point would be in this area of the radio?

As far as the power goes, the black wire should be soldered to a "solid low impedence ground located near the modulation section of the circuit board" and the red power lead should be soldered to the "switched side of the 12 volt power switch". I just need someone to give me an idea of where these points would be.

Thanks in advance for your help.

I'm feeling it's a good idea. It's a good idea first of all because it
will now make it legal to sell a lot of those military surplus wideband
DC-to-daylight amplifier systems.

And it's a good idea secondly, because the CB crowd already has bootleg
linears and there is already a substantial underground selling the things.
If it's legal, maybe at least more of those guys will be using clean
linear amps that aren't bandsplatter machines. If the FCC can't stop
the sale, they can at least try to reduce the sale of the worst amps out
there.

>They have _not_ proposed making any change to the Part 95 rules, which

FYI as any one reading this can guess WA3MOJ, is being forged.. It is being done by a group of anonymous out law CBers from rec.radio.cb. Thier goal is to punish licensed hams who have spoken out against freeband, mod'ed radios, and, illegal power in that newsgroup. Operating outside the rules means a lot to these CBers. Anyone that disaproves of it is seen as a threat. A licensed ham who does not 'go along with the program" and is foolish enough to use his callsign in that group gets harrased. Recently, one, of the out law CBers rang door bells, left notes, and took photos at the residences of hams N8WWM and KC8LDO for the purpose of stalking them. This is now a court matter. Also these same CB out laws are so ignorant they get mixed up and latch on to call signs of hams who do not even post there which is the case with WA3MOJ, N7VCF, and, others. It may be best to let them forge away so that the ISPs involved can shut them down.

maybe if the F.C.C gets enough complaints,they will investigate and
see if its really WA3MOJ or not.
if you care so much, get in contact
with him and ask him to quit selling illegal stuff.

# 2572. HTX-404 Slow tx/rx switching

Newsgroup: rec.radio.amateur.equipment
Date: 2004-04-20 19:53:57 UTC
From: cqkg8co@yahoo.com
Message-ID: <abb68e2d.0404201153.1dc25e2c@posting.google.com>
Source record: 21874

I couldn't figure out why I couldn't stay connected to our local packet cluster with the HTX-404 I recently purchased 2nd hand.

I took the HTX-404 out of line and used it with one of our local 440 repeaters.

At that point I noticed that the tx to rx switching is extremely slow ... infact it is so slow, the repeater switch's from rx to tx and vice versa much quicker than the ht.

I have never seen anything like this.

Is there something that can be adjusted within the ht to correct this problem?

Thank You

Brian, KG8CO
cqkg8co@yahoo.com

How slow is slow? Try bumping up your TNC's TXDelay setting until it
works reliably. Some radios are slower than others.

does it have a PL tone enabled ? I know what you are talking about and i think it is caused by having the pl tone enconder enabled.

If that doesn't make a difference let me know and i'll see if i can dig mine out and figure out what it is

# 2581. Kenwood TS440- need help

Newsgroup: rec.radio.amateur.equipment
Date: 2004-04-21 00:03:41 UTC
From: Mike <Nietzschean@worldnet.att.net>
Message-ID: <xTihc.4548$_o3.144362@bgtnsc05-news.ops.worldnet.att.net>
Source record: 21883

I havent used my TS440S/AT in some time and turned it on last night. I just keept beeping and the display lit up segments that were not numbers, so I quickly turned it off and made sure it was not keyed or anything else was amiss externally. I retried t but it did the same thing again. My suspicion is that the circuit board battery has finially died? Does this sound like the result, and how is it replaced? I went to Kenwoods website to check for a service bulletin but there was none, this is probably covered in the service manual.

Could be the famous "PLL unlock" failure mode.
See http://www.mods.dk/view.php?ModelId=521
or google "ts-440 pll".

Hi Mike
I think the battery is only for memory.
You should join this Yahoo Group and read about the " brown goop " and
the PLL unlock.
http://groups.yahoo.com/group/TS-440/
Good Luck
Harry

It sounds like the battery is marginal. Do a reset (A=B plus turn-on) and see if it corrects the problem. If so the battery is on it's way out.

It's not a PLL problem.

Well, to you - yes. To me? No. My operations are primarily HT. I have
a few installed mobiles. They work fine with the antennas I've bought
from friends, so I know they're tuned for the frequency I needed - I
went to my friend, told them I need a antenna for xxx mhz, and he gave
me an antenna. But now let's say I have an antenna that I know is WAY
too long for the frequency I want it on - i.e. I'm taking a 42 mhz
antenna I want to cut to work on 220. For the life of me, I couldn't
recall the length of the antenna.

So, for someone who 99% of the time uses their HT, and then decides to
go mobile, the length of a mobile antenna may be akin to how many feet
in front of a intersection they can turn. Prior to this thread, if
someone would have asked me on the street the formula for cutting an
antenna, I would have guessed somewhere around the right number, but
nowhere near exact.

Evan

Many Thanks-I just tried the hold A=B and power up reset and it worked! I
down loaded the Service Manual somebody sent me the link to from mods.dk
site, I found the battery in the parts list but couldn't find its location.
Is it obvious when you crack the case, and is it a common battery to find an
equivalent locally.
thanks again for the tip.

Too bad this thread degenerated into a bashing contest.

The length of the antenna is the least of your problems.
You need to figure out how to match it so it will take power.
A web search should turn up some options along with the proper length.
"J-pole" is a place to start. Simple and effective antenna. There are
also loading coil solutions if you're really stuck on 5/8 wave. If you
really want a "good" antenna, search on "coaxial collinear".

> Would you be happier if he posted US$300 or CAN$400 as his asking price?

Yep, That's what I do. Peg the price in Canadian dollars not U.S. ones.

> That way the price is just about bang on in his pocket value wise.

Exactly.

> You are asking him to sell to a Canadian for LESS than he would sell to a
> Yank, and that is a subsidy that is against NAFTA <grin>

Screw NAFTA's supporters. It's a good concept, but..

NAFTA doesn't work 100% of the time anyway. Example:

The yanks have slapped a 25% tariff on Canadian lumber (which comes mostly
from British Columbia), just to appease the
producers of wood from southern Georgia. Why because them Georgians can't
compete against the higher quality lumber
and volume of production of that lumber from Canada and they figure George
Dubya should protect them. Which he did.

Free Trade means just that. Free Trade.No tariffs or other imposed duties on
cross border movement of goods.
If the U.S. really made NAFTA work the way it is supposed to, they would not
have slapped a 25% duty on lumber products
from Canada.

Example:

Canada imports college football players to the Canadian Football League.

In return, Canada exports hockey players to the NHL.

No duties or penalties.

>
> Discrimination is NOT permitted <grin>

When you choose, you discriminate <bg>

>
> If you wouldn't do it you are saying that you would take less from a
Canadian
> than you would take from a American, in terms of value.

If it is a Canadian selling an item to another Canadian, the Yanks never
enter the picture, so nothing is taken from
the Yanks. You think I'm going to buy local stuff here in Canada with
U.S.dollars?

For something that is $U.S. 20, I end up paying $27.00 Canadian for, so why
would I if the item is here in Canada.
Should be able to get it for $20.00 Canadian. I peg my prices on Canadian
dollars, not U.S. ones. His error was
peging the price in U.S. dollars. No Timbits for him from me on that one.
<grin>

Anyway, 'nuff said.

Strong American homes like yours need strong and durable building materials
that are long lasting and enhance beauty.
Insist on lumber products made in British Columbia wherever lumber is sold.

Just my two cents (three cents Canadian at current exchange)
PK

Talk close to the mic (about 2 - 4 cm away).

Increase the sensitivity. In the setup menu is something for this. Offhand I
don't remember what it is; take a look in the manual.

# 2604. Power cable routing, Ford Taurus

Newsgroup: rec.radio.amateur.equipment
Date: 2004-04-22 20:02:25 UTC
From: JLB <IHateSpam@nospam.net>
Message-ID: <mxVhc.3231$hk6.1693@fe03.usenetserver.com>
Source record: 21806
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.equipment,rec.radio.amateur.misc

I am in the process of mounting my old Yaesu FT-4700 in my 2000 Ford Taurus station wagon. The biggest problem encountered is running the power cable. As many others do, I prefer running directly to the battery. The problem with the Taurus, as with many other recent vehicles, is that there are no spare holes in the firewall---at least not that I can find.

So, I went this morning and talked to a local Ford salesman that I happen to know personally (of course buying our last 4 cars from him certainly helps) and asked him how to do it. He didn't know, but took me to talk to one of their mechanics (you've seen the type---middle age, hair starting to grey, grease on shirt---the kind thats been working on cars since he was 15). Evidently this guy also does radio installations for some of their dealer vehicles.

The grass roots, doen in the trenches answer is this:

1. Locate the rubber boot around the steering column, here it goes through the firewall. Using a screw driver or similar tool lift up the edge of the rubber boot and shove your cable through. Seal around it with RTV.
2. Remove the glove box (he assured me that this is easy to do). There is an unused grommet behind it, left over from when the car radio antenna was mounted up front (at least on the Taurus).
3. Drill a hole in the firewall and mount your own grommet. Or use a bunch of RTV.

His only other comment was to stay away from the exhaust manifold, as it would melt the insulation. I might also add to stay away from moving parts, too.

# 2605. Comments on UPS for radio?

Newsgroup: rec.radio.amateur.equipment
Date: 2004-04-22 20:11:07 UTC
From: Ken <cprstn54zz@att.net>
Message-ID: <cu8g80d8tqijv0n2tvg5b1itdikp2a60mk@4ax.com>
Source record: 21807

I have been using a big switching supply for my shack. I intend to change over a to deep-cycle, flooded lead-acid battery if the grid goes down. It is, however, problematic operating a 13.8 volt radio on a lead-acid battery showing a voltage of 12 volts under load.

I am thinking of replacing the power supply with a 20 amp marine battery charger that will automatically drop to float charge, charging a 105AH flooded deep-cycle battery. The battery would feed a "battery booster" -- a DC-to-DC converter that will maintain 13.8 volts at 85% efficiency. The booster would feed my equipment.

Are there any drawbacks to this arrangement -- other than it requires a battery? The advantage is it won't boil the battery and will be immune to outages and brownouts. Also, it will do a fast recharge after an outage.

It seems to me to be superior to the "PWRGate" (isolator?) arrangement promoted by West Mountain Radio:
http://www.westmountainradio.com/PWRgate.htm

I think I can put together a system that will provide long-run, 13.8V UPS to a 30-amp-max rig for around $175, not counting the battery. Comments?

## 2609. DSP in IF Stage?

Newsgroup: rec.radio.amateur.equipment

There's a number of commercial amateur transceivers that have
DSP in the audio stages but do any have DSP in the IF before the
detector/AGC?

Had the same problem with my Taurus...I said "forget it" and went along the fender, and in the door...near, but not next to the door hinges.
Also did the same method on my current Olds Intrigue.

It can certainly can be done, it's pretty common now for radios to use DSP at up to even a couple of hundred MHz. Whether there are ham txrs with this I'm unsure of.

Ken

The thing I don't like about this method is it puts your primary heavy
current wire (which I would hope would be fused), in direct contact with
a metalic edge. After awhile, with road vibration, the insulation will
wear through to the wire and short out.

> 2. Remove the glove box (he assured me that this is easy to do). There

This would be a good choice if the wire routing would be away from hot
manifolds, etc. I also like to use some wire loom when routing my
wiring. This give it added protection.

> 3. Drill a hole in the firewall and mount your own grommet. Or use a

I have done this a few times and again, as long as you stay away from
hot manifolds, moving parts, etc., its perfectly fine.

Well, he also mentioned the possibility of poking a hole in the steering column boot. That may not be too bad, as there seems to be a lot of room there.

Dear Group, Have for sale the following radios, taking reasonable offers from 4/22/04 until 5/22/04.

FS, New:

*****
Brand new in box radios with 90-day parts/labor warranty:

2ea. AAH25RDG9AA4AN HT-750 W/KEYPAD, 16ch, UHF 1-4W, 403-470 (includes batteries and antennas, Have one rap-chrgr available.).

5ea. P43QLC20A2-A P-110, 2ch, VHF, 5W, 146-174 (with belt clips, batteries, antennas, NO CHRGRs, sorry.)

2ea. D34MJA73A5DK Maxtrac - 100 Wide 2 UHF 25W 449-470, radios only, no accys.

*****

FS, Used:

1ea. HT750 VHF 16ch. 5w, with or without charger, NEW condx, only out of box a few months, about the house as a scanner/ham radio. AAH25KDC9AA3AN

HT600 UHF, 6ch, 450-470ish, SET of 2 radios, (one w/DTMF) including one rapid charger. Good Condx with some minor blems.

I'll be busy the next couple days but I'll get back to you ASAP if your offer is accepted or to answer questions.

NO TRADE OFFERS PLEASE, U-ship and feel free to ask questions, tnx!

Thanks much!
Randy

: after an outage.
(snip)

How many amps is the "battery booster" rated for?

Astron sells something for similar use. Some of their power supplies are
available with the BB (Battery Backup) option. This is a circuit that will
float charge a battery, then protect the power supply when power fails and
the battery is called upon to power your rig.

I have this setup on my APRS WX station running 24/7. If commercial power
fails then the battery will take over. The computer running APRS will not
be powered, but at least the radio and TNC will still be up .. possibly
providing need network capability during an emergency. But, I'm running an
HT for a transmitter so it will work with less than 13.8 volts.

As I said above .. I think you should look into the possiblity of damaging
your charger if battery voltage is put into it the "wrong way"

So is the 746Pro. I have never had a better Rx. The noise reduction and filtering capability can not be beat by any other rig even close to this price range.

I think marine chargers are made to handle the situation when there is
no shore power, but I will make sure. Otherwise a 20 amp diode would
be needed.

Yes, the booster is key. That needs to handle 25 amps on a 30% duty
cycle -- to provide 100 watts FM.

If you want to keep your ham license my advise to you is not to make any
conversions to 11 meters. CB radios still need FCC acceptance. If you
want to undertake the task of getting the acceptance then disregard my
previous advice. BTW the tests to obtain acceptance should only cost you
1 or 2 hundred thousand dollars if you are lucky.

I've been doing it for years. Except I don't use the dc-dc converter.
Voltage should not be a problem if you are constantly charging the
batteries.
>

I only spent about $50 bucks for a 12/2 amp automatic charger. I ran a
battery and a 3 amp trickle charger for years using a ic-730. It will
keep up in most instances as you don't talk all the time. Neither the
730, or the 706 I use now have any problems with the slightly lower
voltage. Both are 100w radios. MK

I have done that and that is not a bad method as long as you don't get too close to the steering column or the other edge. When I used that method it is, "inspect, measure, reinspect, remeasure, re-reinspect, re-remeasure" to make certain I am not getting into anything on the other side of the bushing or getting too close to the column or the firewall.

Hi,

Good info, just like to add this tip:

Most cars the hood release cable runs past the battery on the way to the
hood latch up front.

You can run your cables along the same route, throught the firewall
with the hood release cable.

My experience with automotive 12/2 automatic chargers is they drop to
trickle charge, not float charge. If you leave them hooked up
permanently, they kill the battery in a month or so. Also, they can't
be used with SLA, but marine chargers can -- and they drop to "float,"
not trickle. This is necessary because boat owners hook up to shore
power for long periods of time and don't want to bother switching the
battery charger on and off. Because of that -- and their built-in
isolators to handle more than one (non-parallel) battery -- they cost
$150 instead of $50.

The radios you have that run well off batteries, What do the specs
recite as the required supply voltage? I know that my FT990 wants
13.8 volts and really drops off quickly on 105AH battery power. OTOH,
my FT817 is happy with anything down to 9.6V (if memory serves).

Apparently, there is a [possibly small] market for the battery
boosters:

## 2630. Ladder line question please?

Newsgroup: rec.radio.amateur.equipment
Date: 2004-04-23 16:38:40 UTC
From: Bob <nubob5001@yahoo.com>
Message-ID: <5Ebic.643$_o1.120724@read2.cgocable.net>
Source record: 21832

I have the 50 foot tower, it is right outside the shack window, so will be drilling the two small holes in the sill, then fishing through approximately 12" or 18" then replace the spacers to keep the distance between the leads constant. That leaves the remaining 98 feet outside of which I need a distance of approx 35 or 40 feet of the ladder line to reach my center fed 80m or two wires 66feet each leg. What are my options with the left over 50 feet (approx) of ladder line? Coil it up? Cut it? And what are the rules about keeping the ladder line away from the tower and steal guy wires that are not insulated? I only want to do this once now and first time using the ladder line, all suggestions appreciated, thanks.....

# 2631. Re: Ladder line question please?

Just run the amount of feed line you need, then cut off the rest and keep it for the next project. If your (balanced) tuner has trouble, then change the length of the line by 1/8 wavelength on the band you have trouble with. Keep the ladder line several "spaces" away from the tower. putting a full twist in it every 5 to 10 feet will keep it from flapping in the breeze and improve any electrical imbalance to the tower.

ICOM-751 dead, help

I was using my radio just fine, than I unplugged it and moved it a few feet
and now it is almost dead. I can hear a relay engage when I first turn it on
and fall off about 10 seconds after I turn it off.
What happened?

## 2635. Swan 1011 and Siltronix 1011B

EXTREMELY rare, near new condtion, SWAN 1011 AND SILTRONIX B MODEL w/ manuals (copy). Cabinets/faces are unscathed w/ no visible scratches, all original hardware, dials, and knobs, working lights and meters, tubes and components all in good to very good condition. $275/each or $500 for BOTH + shipping (sorry, no way to take pics)

Thanks, yes the tuner is balanced. Thnx

So cutting it at about 50 feet is not a problem. and aim for as much
distance from the tower, building, eaves and guys as possible.
thnx

Hi Ken,
as other people have mentioned, it is not a problem running radios on 12v - or indeed, 12.6 volts for a charged battery. Why make this so complicated - cheap SLA battery chargers/float chargers are available off the shelf in the local supermarket, if you want automatic changeover then wire up a BIG relay, coil operated by your mains power supply, which then switches to the batteries on power fail.

As amateurs, we should be able to think a bit laterally and come up with simple, cheap, off the shelf solutions - remember, if it aint hi

tech its less likely to go wrong when you ned it.

The best solution is much simpler than those that I've seen here.

I use dual switching p/s through a dual-diode isolator onto a 100 AH
deep-cycle marine gel-cell. Both supplies are set to deliver 13.5 V
to float-charge the battery. Two supplies are used in case one goes
down for overload or any other reason such as my kicking the on-off
switch to "off" accidently as I did once.

All devices are rated for 50 A. Make sure that you use sufficiently
large wire and adequate overcurrent protection (I use marine-rated
circuit breakers) to protect the supplies, the battery, and the
load(s).

The only thing unusual about the setup is that the isolator has to be
one made for positive-ground vehicles (yes, auto supply stores sell
them on special order, same price) because the standard ones for
negative-ground vehicles are for two batteries charged by one supply
(alternator) rather than one battery charged from two supplies. If
you only want to use one supply, you can use one side of a standard
isolator.

Be sure that the supply is a regulated constant-voltage supply, not
a "battery charger" whose output is really semi-filtered DC. If you
can operate the radio on the supply with no hum problems, it will be
OK for float-charging.

The bottom line -- keep the battery on line at no more than its
rated float-charge voltage, and all the isolator is -- is a big
diode on a big heat sink.

Harris has been producing the RF-5000 series HF transceivers since about
1990 with DSP IF. Bandwidth can be selected from 340hz to 6khz. AGC,
syllabic squelch, AM/SSB modulation and demodulation is also done in
DSP. The roofing filter in this series is only 8khz wide and the
receiver performance is fantastic!

For Sale

Icom IC-W32A

2m/70cm Handi-Talkie

Specifications:

Dimensions: 2.25 (W), 5.5 (H), 1.4 (D), 16 oz
5 Watts of power @ 13.5 V
200 memory channels
8 character alphanumeric memory channel identification, keypad entry
Backlit display and keypad
ICOM rugged! Meets MIL SPEC C/D/E for shock and vibration
Handheld to handheld cloning capability (opt. OPC-474 cloning cable) or PC programming capability (opt. CS-W32 cloning software and OPC-478 cloning cable)
Independent band controls for tuning and volume
VHF/UHF exchange function allows assignment of VHF/UHF band controls to either knob
Set your preferred band to the knob furthest from the antenna

Factory box and manuals included.

Hi folks

I want an auto ATU for my IC706. Icom list this item as the AH-3, but I know there are other companies which make cheaper options, Alinco for example.

If you have such an item spare, please let me know.

cheers
Jack

www.cbtricks.com might have some service information on your particular board. It is helpful to have this information before you start doing this.

Hi Jack

Check out the LDG tuner,

\http://ldgelectronics.com/rt-11_description.html

I have one hooked to my 706IIG and works fine.

SGC also makes one,

http://www.sgcworld.com/products/239/239.html

Of course Icom has the AT-180, kind of pricey though and it has a much
narrower tuning range than the LDG or SGC.

I'm sure there are others which i don't know about.

I think the current AH-4 is the replacement for the AH-3. The AH-4 seems
to work fine with my IC-706MkIIG, but they're not cheap even in the USA,
and probably still more in VK.

Alan AB2OS (long-ago VK4AFE)

On 04/24/04 01:31 am VK2CJC put fingers to keyboard and launched the
following message into cyberspace:

I dunno, I thought the '65 Mustang was a wretched, poor-handling
sloppy-steering rattletrap, but a good one nowadays fetches $100,000
and up.

To each his own... some folks collect even old Swans...

FS: Ameritron QSK 5 unit in near new condition. This unit is excess to my needs as I already have 3 other qsk units here. This is a solid state / pin diode qsk box that hooks between the amp and rig so that you have full break-in with the amp. Original price is $350. I'll take $175 shipped. This is the complete stand alone unit- not the board that goes into Ameritron amps. It will handle 1500 watts. (I can also bring it to Hoss Traders in NH next weekend) 73s Lew K1NDV

All too often that is the mark of a "collectible". They sold zillions of them becuase they were cheap so there is a lot of nostalgia money to be found in the marketplace.
Swan 350 was an atrocious drifter by todays standards, well by 70's standards too. People plonk down collector bux for junk rigs like the National NCX-3, the Swan Cygnets 270/260 but that has no correlation as to how good/bad the rig was. A $5000 Atwater-Kent breadboard set is hardly a stellar performer but i wouldn't sell it for 10 bucks because that is what it is "worth" as a receiver.

My wife wears a HA and had no trouble using her older Cellphone, even the new one worked FB until the local systems switched to Digital Service. If she uses it in the country-side where it is still Analog Service there is no problem !

The problem is- in the city, all new Cellphones automatically default to the Digital Mode !

The only answer available is to revert to using an analog service only Cellphone! Thank God for EBay

I think the only real solution is somewhat similar to TTY for the deaf . Legislation ,mandating the availability of an ANALOG service channel on all Cell-nets as a Legacy Mode for the Hard of hearing . Apparently there is no simple solution to the Envelope Modulation interference caused to Hearing-Aids by the Digital Mode of Operation. It would be relatively simple to require the owner of the Analog-Mode Cell-phone to show a hearing aid at the time the phone is activated, a procedure that requires the presensce of the obsolete analog Cell-phone and presumed operator to interact with a representative of the Cellphone Network.

The operators of the Cellphone Networks would love to eliminate the bandwidth hogging Analog Channels, but there seems no simple solution . Inductive Neckloops seem a sloppy solution to a technicalogic problem..

Digital Cellphones and Digital service are NOT compatable with Hearing Aids!

I did the same thing in my new Ford Explorer ... I first carefully scoped out BOTH sides of the boot, looking for "interference" issues, then I took a long, thick needle (a test pick/probe with about 3" of needle in about 5" of nylon handle) and carefully poked it through the boot in the target area to double check.

When all looked good, I removed the needle and used a sharp xacto knife to make an X cut, through which I pushed the red/black #10 "zip-cord" power cable (I used cable I bought from PowerEx along with some Andersen "PowerPole" connectors).

Some sealant (non-corrosive - don't use the "RTV" stuff that smells like vinegar - it contains acetic acid) was then applied carefully around both sides and the cable was fitted with the split, "corrugated" plastic cable sleeving that you can buy at most auto parts stores.

Remember to fuse BOTH pos and neg leads AT THE BATTERY with suitable fuses (PowerEx has fuse holders for the new automotive type fuses). You want to be SURE that the leads between the battery connection and the fuse holders are short enough and anchored well enough that no matter what you can't get a short from the positive lead to ground - otherwise, major fireworks could occur.

Good luck.

> What happened?

If it has never been replaced it is possible that what happened is that you had a battery failure in the RAM board. There is a resonable chance that unplugging the radio and moving it was just the last straw for the old battery. This will leave you with a very dead radio.

See the following for details....

http://www.willcoele.com/
http://home1.gte.net/rhashiro/am-radio/ik2rnd-icom-ramboard.htm

Also it is possible to change the battery and reprogram your own board but it may be a little involved....

http://www.geocities.com/emailsrikanth/ham/icomram/RAM.html

I think you can still send them back to Icom for battery installation and reprogramming as well.

I would suggest a Google search for - Icom 751 memory board - there is a lot of information out there.

Curtis

# 2691. Icom 730 preventative maintenance question

Newsgroup: rec.radio.amateur.equipment
Date: 2004-04-25 16:46:52 UTC
From: Michael Brown <mabrown@qx.net>
Message-ID: <H72dnfPXC7JcdhbdRVn-jA@qx.net>
Source record: 21792

I recently purchased an Icom 730 HF radio. This is my first HF rig evn
though I have had my Extra class license for about 2 years now. I noticed
on the Icom web page that there are several preventative maintence tasks
that they recommend performing on the IC-730 due to the age of these rigs.
I am looking for anyone that may have performed these tasks on the IC-730
that might be able to give me a basis walk-through of how I need to go about
taking the panels off the radio to gain access to the RF unit in the radio.
Here is what is listed on the Icom web page that they reccomend doing to the
radio:
1.) On the RF unit, resolder the J2 and J3 connectors. Due to the
relatively thick coax cables on the connectors, these solder joints tend to
crack with age and cause intermittent transmit and receive problems.

---

2.) Make sure the receiver preamp works. If inoperative, replace relay
RL1 on the RF unit. Install the factory update to prevent relay failure.

---

3.) Check transistor Q5 on the RF unit. If it is a 2SC945Q, replace it
with the improved 2SC2878B to prevent spurious output from the transmitter
and failure of the driver transistors. If Q5 is a type 1636, it doesn't need
to be replaced.

---

4.) Clean the RIT pot and switch with tuner cleaner. These controls
are usually noisy and erratic, making the RIT hard to use.

---

5.) Tighten the chrome-plated PC board mounting screws. The screws and
spacers tend to come loose if the radio is used in a high-vibration, mobile
environment. Don't forget to tighten the screws on the logic and IF units
located beneath the main unit.

---

6.) Check the bandwidth coupler for proper tightness.
Tighten as needed.

I'm sure the first step of re-soldering the J2 and J3 connectors on
the RF unit I can probably handle if all this involves is desoldering the
connectors and resoldering them. I'm not so much concerned about the
receiver preamp working, but does anyone know if Icom still stocks parts for
the Icom 730? The third step reccomends swapping out the Q5 transistor on
the RF unit if it is a 2SC945Q transistor and replacing it with a 2SC2878B

transistor to prevent spurious output from the transmitter and failure of the driver transistors. How hard would it be to replace this transistor? I would assume it would involve desoldering the transistor and replacing it with the new transistor. Would I just need to get a 2SC2878B transistor and some heat sink compond to replace this transistor? Where would get the 2SC2878B transitor? Can I order one for Mouser, or would this have to be ordered directly from Icom? Step 4 involves cleaning the RIT pot with some tuner cleaner, probably the easiest step. How do I locate the RIT borad to clean the pots? I would assume here too that all I need to do is to spray a shot of contact cleaner in the holes of the pot and switch on the RIT unit? Step 5 reccomends tightening all of the screws on the PC board. Hopefully I can handle this step if I can get access to all of the srews to tighten them. Step 6 reccomend checking the bandwith coupler for proper tightness and retightening it if needed. Where is the bandwidth coupler located inside the radio? What tools would I need to tighten it?

I thought I would post these questions on the newsgroups to see if anyone that is a little more technical-minded than me could walk me through performing these tasks. I have downloaded an instruction manual and service manual for the IC-730, but I thought maybe someone who might have a 730 and has performed these tasks could tell me how do them a little easier. The last thing I want to do is screw up a good radio. Thanks for reading my long post. Please e-mail me if anyone can help me out with this. Thanks!

<snip>

I've worked in repair shops too, and noticed people's descriptions of
something being "dead" often leave a lot to be desired.

"My TV is dead."
"Oh, is the picture completely black?"
"Uh, no."
"Well what does it look like?"
"It's all fuzzy."
"You mean blurry?"
"Uh, no. It's like sand."
"You mean snowy?"
"Uh, yeah. I guess."
"And is there no sound at all?"
"No. It's fuzzy too."
"You mean people are hard to understand?"
"No. It's like the picture."
"Oh, you mean just a hissing static sound?"
"Yeah. Like I said, it's dead."
"Do you have an antenna or cable system hooked to the TV?"
"What's that?".....

Curtis

wrote:

I would say, fix things only after they break. You'll go a little
balmy trying all the preventatives you suggest. Since you have a
service manual, that should give you what you need to walk you through
the procedures.

Parts on a rig that old are iffy. Icom may have some. And not have
some. Manufacturers are required to stock parts for only 7 years.

Finally, as the owner of an Icom 735, which is about the same vintage
as your 730, I can recommend Clif Holland at Avvid in Irving, Texas to
fix what you cannot.

Have fun...

Bob

Message-ID: <VWWic.29209$Np3.1037730@ursa-nb00s0.nbnet.nb.ca>
Source record: 21700

My Tek 466 scope decided to misbehave. It will not display the horizontal beam unless I press the beam finder. When I do it displays whatever I'm looking at(eg: 7 Mhz sine wave) properly.
I'm quite familiar with this scope, but possibly doing something stupid.
Does anyone have any idea as to what the problem could be?
Thanks in advance for any light you can shed on the problem.

Laurie

Those are not really preventive maintenance issues but troubles and
cures if the rig exhibits them. I would not do anything until you have
any of htose listed troubles, if you do at all.

The IC-730 only meets receiving specifications when the pre amp is
operating. I owned a 730 for several years with any problems except
for the pre amp relay. You will like the 730 its a nice rig.

# 2704. Yaesu FT-ONE

Newsgroup: rec.radio.amateur.equipment
Date: 2004-04-26 05:28:04 UTC
From: zeno <zeno@sonic.net>
Message-ID: <408C9DE4.483F1BC8@sonic.net>
Source record: 21706

OK, I know this unit is total out of date and apparently had some glitches, but it came along with an entire lot I obtained which contained some other really good stuff, so in a sense I have almost nothing invested in this solid state boat anchor, but how bad can it really be, afterall it was apparently Yaesu's top of the line transceiver a couple of decades ago.

Might I not have some fun with it for awhile until I decide what better thing to get? I am a new returning ham after more decades than this outmoded transceiver. Apparently it was both ahead of its time and outmoded as soon as it came out in the early 80s. There was not very much info online but apparently many European hams used it for awhile. I am just getting started and am not sure what to really invest in. This Yaesu is in working condition and the old guy getting rid of it (and a whole garage full of other stuff), thought it was pretty great when he last used it. Anyone have anything good to say? Actually I haven't even hooked it up yet.

Bill, K6TAJ

If I remember correctly, that was Yaesu's challenge against the Drake TR7. Glass epoxy circuit boards, card cage construction, doubly-balanced diode ring mixer. You can't go wrong with this one. I've wanted one for quite some time, but whenever they go up for sale, people are asking very silly prices. With all of the newer feature laden transceivers currently available, you wouldn't be able to sell it for what it is worth; that is the reason that I am keeping my TR7. I would just hang on to it. It is a nice rig.

Pete

Laurie:

There are really several possible problems you may be encountering.
Positioning is one, another may be gain...

Beam finder centers the display so you can see you have a trace active. In most models, it also temporarily switches the scope to auto trigger.

Most likely, you have the horizontal or vertical position maladjusted to put the display way off the screen... Try centering the horizontal and vertical position controls and see if you can see the trace.

If you set the trigger to Auto, you should see a trace on the display even if there is no signal applied. Also, when you press the beam finder, if you watch closely, you may notice which direction the displayed waveform came from, or the direction it goes when you release the beam finder button. This can give you an idea of which of the position controls you need to adjust.

If you have the position controls centered and the trace isn't somewhere near center, check the DC/AC signal switch. If you have it set to AC, it should be centered if the display position controls are somewhere near centered. If the input signal is DC coupled, and there is a significant DC offset to the signal, it can be off screen. Changing the coupling to AC will help to center the trace on the display.

Gain could also be a problem. If you have the vertical gain set too high, even if the display is centered, the trace is spread out so far vertically that it can be nearly invisible.

Still no joy?
To set the scope to a known state, set Coupling to AC, center the horizontal position controls, and set the trigger to auto. Turn up the display brightness (not the graticule illumination) and you should see a single horizontal line (trace) somewhere near the vertical center of the display. Add an input signal and you should see a change in the trace. Adjusting the time base and trigger level should allow resolving the trace to a stable display.

Nearly everyone has lost a trace in the history of their scope use, been there, done that myself a time or two, especially when in a hurry....

There was a article in Communications Quarterly several years ago about stablilizing the thing and adding a 10 hz display. It's got several oscillators and they all float around. The crystals were part of the problem, but also the use of cheap trimmer caps which were replaced with piston trimmers in the article. A fun rig to play around with, but you might need to get some extender cards if you can find them otherwise jury rig up with wires to card connectors (a mess).

Enjoy

I just finished repairing my 465 scope that had a similar problem. When powered up the trace would appear off
the left hand side of the screen. Turned out to be bad filter caps in the +5v and -8v supplies. Check the
supply voltages at the TPs, if 2v or more less that what it should be then replace the caps.
After looking at some of the Tek newsgroups I gather that bad filter caps are a common problem with Tektronix
scopes.

Rick & Joe,
Thanks for your suggestions, however, all of your mentioned items have been checked, and I am quite confident that the problem lies inside the box. I now have a 333 page service manual...that unfortunately is more oriented towards callibration than troubleshooting...but may lead to some useful information.

Laurie

Richard,
I believe that you are on target. I will try to find the TPs and verify
the voltages.
You mention Tek newsgroups. Can you tell me their location.
So far, they have eluded my searches.
Thank you very much for your suggestion.

Laurie

Hi Dale,

There are a bunch of "cards" here in a plastic bag which the ex-owner said
were used when working on the rig. Is that what you are talking about? It

might be interesting to track down that article in Communications Quarterly, do you have any more info on that source?

Bill, K6TAJ

Laurie,
Here is one group on yahoo, http://groups.yahoo.com/group/TekScopes/?yguid=145910120
Another is the newsgroup, sci.electronics.repair, this group covers everything under the sun.
I would tell you were to look but the 465 is different than the 466. Mine were on the "interface board"
which is located on the bottom of the scope, they are pins with eyelets in the ends. Voltage should be marked
on the pcb next to the test point pin.

Richard,
Thanks for the info on the groups. Regarding the voltages, they all check ok except the -8v is something like -7.78volts. Whether this is enough to cause the problem, is doubtful. Going through the service manual, there is more information than I thought at first glance. However, it calls for a lot of reading and my old eyes tire very rapidly!
There was a 465 on ebay today, but I lost out. The 465 has a few less thing that can go wrong. But I suppose that digging into the 466 will help me learn a few things!
Again, Richard, thanks for the advice.

Laurie

It was certainly the cat's meow in the early 80s when it was
introduced. Just plug the damned thing in and use it. Will probably
outperform most newer units. While you're at it, find a good guru who
knows how to fix older Yeasu's. :-)

A few years from now, it'll probably be worth $10,000 plus on ebay.
(If you keep it stock).

I have a IC-706-mkIIg that I have owned for about three years that has always worked perfectly.

It recently has started to power itself off for no apparent reason after being on for a minute or two. It behaves as if it is going through the automatic shutdown which is set for 60 minutes of no activity.

When it is on, it seems to be functioning normaly, transmits and receives fine.

I thought at first that maybe the CPU just got scrambled so I tried a complete power-on reset to reset the CPU but it still does it. There is no obvious sign of overheating and my SWR is fine. (It powers itself off even if there has been no transmitting.

I just wondered if anyone had any ideas about this before I send it into ICOM for service.

Thanks for your thoughts,

Dave WK8F

What are you using for a power supply? Might be worth having a look with a volt meter when the rigs shuts down...

If nothing else it is a challenge to learn. Lots of features, kind of on the complicated side of things. Guess it is a good introduction to modern style rigs. It has all the documentation, manuals, service manuals, and every receipt for minor repairs. Apparently the pilot lights are out on the two meters. I may just forget about this, since I imagine it is not an easy fix. Does Yaesu still work on these things?

What is the difference between the Round Emblem and the Winged Emblem Collins 30L-1 ?

As I understand it the Round Emblem ("meatball") is the later edition and is pretty much the same except for some minor upgrade on some components. Not sure what exactly, would like to know actually. I assume this is the reason why the Round Emblem seems to be slightly more desireable.

PS. there are a couple of beautiful Winged Emblem examples on eBay at this moment.

Posted on behalf of a Ham who e-mailed me with this request -- can any one
help on this one.
---
I understand you have a program for the icom718 to be operated by a PC,,,
We have a quadriplegic ham member that has this radio but doesn't have to
ability to get to radio to use it ,,, he has the ability to operate a mouse
and key a mike, will the program you have make it possible to operate the
rig from a pc??? please let me know if this is so, thanks Jimmy B -
KB4ILV --- SEC-TREA.
SOUTHERN SECTION OF THE COUNTRY COUSINS
---
Do not reply to me -- but
E-Mail Jimmy direct at kb4ilv@comcast.net

Hi,

There is in the menu an option to ask the RTX to switvch off after some
time.
I do not rememebr which but if you review all setting you could find it.
I wonder if this is not an option called "TOT" or something like that
http://www.astrosurf.com/lombry/Radio/manual-icom-ic-706MKIIG.pdf

This is explained p51 in the referenced PDF file, "6 AUTO OFF"
The initial setting is OFF with a choice between 30, 60, 90 and 120 min
delay.
I think this is the "problem" you have.

Sorry, I didn't read that you already set the delay to 60 min ...
A friend of mine tells me that the IC does not really support too much
moisture compared to its Yaesu competitors and that cause many many
problems, not only with the power with also the impossibility to emit, etc
due to defect relay, etc.
If it worked until now, the most probable explanation 'd be a defect
battery.... :-(

# 2736. CW beta tester needed

Newsgroup: rec.radio.amateur.equipment
Date: 2004-04-27 22:39:41 UTC
From: sumnere@aol.com
Message-ID: <20040427183941.26462.00000529@mb-m07.aol.com>
Source record: 21738

I have a unique opportunity for an avid CW operator who would like to volunteer their time as a beta tester for a new distinctive electronic keyer. The keyer is designed for comfort, smooth operation and simplicity. To my knowledge nothing like it is available in its entirety on the market today. This really is a one of a kind keyer.

I seek only one CW operator, to whom I will ship a prototype unit (no cost to you) for use over the next few weeks. All I ask is you put it through the pace and with an open mind critique its usability.

You must meet the following qualifications:
A) Ham operator.
b) Be highly proficient at CW.
c) Active CW operation for a minimum of 12-15 hours during the beta period.
d) Comfortable with an iambic form of an electronic keyer.

You will be required to sign a non-disclosure and non-competitive form.

In return for your efforts I provide you, free of charge, one unit when the final configured design is complete.

I have used this (my) design over the last few months and find it to work perfectly. However, and sadly, I am not an avid CW operator and limited in putting it through it's speed and performance paces.

Further details will be sent to those who email me with interest and details of your operating skills and time spent.

Please feel free to ask questions. I hope to release the product in the next few months based on feedback.

Those interested in product information and release may also email me and will be notified of special pricing just prior to its full release.

Thank you.

Email to: Sumnere@aol.com

> Bill, K6TAJ

Bill,

I'll see if I can find out the article and get back to you. If you are
really into this radio it can be a fun project. International Crystal
has the stats for the high stability crystals, at least as of a few
years ago. The piston trimmers are about $10, but worth it.

It sounds like you have the extender cards which is very good indeed.

Dale

I am looking to sell the unit mentioned in the subject. It's hardly ever been used and I have all parts, including the manual, box, mic and bracket.

Could anyone here tell me what an appropriate price would be for the unit? I know what i'd like to get for it but i'm sure that # does not match what it is currently worth.

Also, if anyone knows of a better place than ebay to sell it, it would be helpful.

Your advice and guidence is appreciated.

Bill

Most of the MKII models seem to be going between $500-700, depending upon such factors as whether they have the separation kit, etc., and how much money people are wanting to spend at the time. I should think around $600 at present, as HRO has the MKII-G model at present for $759 with free shipping.

Ebay is your best bet for making the most money, but you could post here or rec.radio.swap or rec.radio.amateur.swap or on eham.net.

# 2740. FS: Knight Speaker, Mikes, Keys, Meters and More

Newsgroup: rec.radio.amateur.equipment
Date: 2004-04-28 02:03:46 UTC

Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap,alt.ham-radio.marketplace,rec.radio.amateur.equipment

I have the following items for sale. Prices do not include shipping. I will ship overseas.

External Matching Speaker for the Knight R-100 Receiver.....$45 plus shipping
Cosmetically excellent with no dings or scratches. Logo is rough but itï¿½s just a sticker.
http://members.cox.net/radiostuff9/knight_speaker.jpg
http://members.cox.net/radiostuff9/knight_speaker2.jpg

MFJ Electronic Keyer Model CMOS-8043.....$35 plus shipping

You are bidding on a MFJ Model CMOS-8043 Electronic Keyer with a built-in paddle. This is a nice compact self contained keyer with a sidetone that will work with direct or grid block keying. Works great. Includes a new 9 volt battery.
http://members.cox.net/radiostuff9/mfjkeyer.jpg
http://members.cox.net/radiostuff9/mfjkeyer2.jpg

Electrovoice Model 623 Microphone - New in box.....$125 plus shipping
This is a Hi-Z dynamic mike with instructions and cable.
http://members.cox.net/radiostuff9/ev623_mike2.jpg
http://members.cox.net/radiostuff9/ev623_mike.jpg
http://members.cox.net/radiostuff9/ev623_mike3.jpg
http://members.cox.net/radiostuff9/ev623_mike4.jpg

Turner S22X Crystal Microphone.....$30 plus shipping
The unit has been tested and works. Cosmetically it has pitting but has been polished up and presents itself quite well!
http://members.cox.net/radiostuff9/mike.jpg
http://members.cox.net/radiostuff9/mike2.jpg
http://members.cox.net/radiostuff9/mike3.jpg

Eico 249 VTVM.....$25 plus shipping
Clean and working unit with a nice large easy to read meter. Meter has a small crack on the lower left side and their is a scuff across the meter face. No probes but has a connector so you can build your own. Includes a photocopy of the manual
http://members.cox.net/radiostuff9/eico249.jpg

Weston Model 904 Precision AC Voltmeter....$35 plus shipping
This meter measures 0-750 volts and the ranges are changed by making the appropriate connections on the top of the meter. The ranges are: 3, 7.5, 15, 30, 75, 150, 300 and 750 volts. This is a working unit in excellent

condition.
http://members.cox.net/radiostuff9/ac_voltmeter.jpg
http://members.cox.net/radiostuff9/ac_voltmeter2.jpg

Westinghouse AC Voltmeter.....$35 plus shipping
This meter in a heavy bakelite measures 0-150 volts and the ranges are changed by making the appropriate connections to the meter. The ranges are: 1, 5, 15 and 150 volts. This is a working unit in nice condition.
http://members.cox.net/radiostuff9 west_meter2.jpg
http://members.cox.net/radiostuff9 west_meter.jpg

Precision Apparatus Series 85 VOM.....$20 plus shipping
Vintage well built VOM. Tested and working.
http://members.cox.net/radiostuff9/series852.jpg
http://members.cox.net/radiostuff9/series85.jpg

Winslow Telegraph Key.....$20 plus shipping
http://members.cox.net/radiostuff9/winslow_key.jpg

Brown Portable Potentiometer - Honeywell Artifact.....$40 plus shipping
This was made by Minneapolis Honeywell in Philadelphia. Never knew they were in Philadelphia so this must be pretty old! I would guess that this is from the 1920's or 1930's. According to the instruction card, "this instrument is for checking potentiometers and thermocouples. It can also be used for checking millivoltmeters and other sources of electromotive force within its range. The range of this instrument is 0-71 millivolts DC." The instrument itself appears to be in excellent condition. The instruction card does have a water stain and and leather handle is coming apart.
http://members.cox.net/radiostuff9/honeywell_artifact.jpg
http://members.cox.net/radiostuff9/honeywell_artifact2.jpg
http://members.cox.net/radiostuff9/honeywell_artifact3.jpg

VHF Probe Detector - RF Labs Boonton, NJ.....$35 plus shipping
This is a piece of vintage test equipment, a VHF Probe Detector made by Radio Frequency Labs of Boonton, NJ. According to the enclosed data sheets, this was made in 1950. This unit covers 70-150 MHz. Includes the meter, all attachments and the wooden case. The original factory calibration sheets filled out by hand and dated November 1950 are still in the case. All appear to be in very good condition.
http://members.cox.net/radiostuff9/vhf_detector1.jpg
http://members.cox.net/radiostuff9/vhf_detector2.jpg
http://members.cox.net/radiostuff9/vhf_detector3.jpg
http://members.cox.net/radiostuff9/vhf_detector4.jpg
http://members.cox.net/radiostuff9/vhf_detector5.jpg
http://members.cox.net/radiostuff9/vhf_detector6.jpg

McMurdo Silver Model 900 VOMAX VTVM with RF probe...$20 plus shipping
This is from the 1940's and an interesting piece if you collect McMurdo Silver equipment. Includes a copy of the manual. This unit is untested.
http://members.cox.net/radiostuff9/silver_vomax.jpg

Thanks for looking.

The ts-140 and most 100-watt hf rigs take a 20 to 25 amp external
power supply, providing 13.8 volts dc. Nowadays, small lightweight
switching power supplies are popular -- $100 to 150 should get you one
with all the juice you need. Astron and MFJ are two popular brands.
Some people use car batteries and a trickle charger.

Typically, only the more expensive rigs nowadays have built-in power
supplies.

Good entry level HF rigs include the Icom 718, Icom 706mk2g, Yeasu
840, Yeasu 857, Kenwood ts-50, Alinco dx70th or dx77t.

Go to www.aesham.com and ask for their free paper catalog.

Older rigs like the ts-140 work fine, but parts and repairs can be a
problem.

Typically, only the more expensive rigs nowadays have built-in power
supplies.

Good entry level HF rigs include the Icom 718, Icom 706mk2g, Yeasu
840, Yeasu 857, Kenwood ts-50, Alinco dx70th or dx77t.

Go to www.aesham.com and ask for their free paper catalog.

Older rigs like the ts-140 work fine, but parts and repairs can be a
problem.

I had a similar problem. Solved by cleaning the contacts between the control head and the body of the radio.

Jean-Marie

Hi all

Is somebody here knows how to get a 1750hz tone call on a TH-77A to open
european repeaters.

My handheld has not this tone call ( US version )

I accept also web sites URL to find free service manuals for TH-77, DX-70,
Alan vhf handheld (I need the tone call also).

Thanks for any reply.

Hi, folks.

I have a RACAL 6217E. The manual for the 1217, which supposedly is
the same radio, doesn't _quite_ correspond to the hardware in the
6217.

Anyone know where I can get a manual for the 6217?

Thanks in advance.

Hi Fred

Thank you for this URL I know and often use, but there is nothing about these transceivers service manuals, only user manuals. There is an explanation but it's not very clear and I have some problems for the "interpretation" of the bulletins wich can be read about this subject on www.mods.dk.

Thanks one more time and have a good week end.

Best regards

It was cracked, I am repairing for my neighbor. The unit works fine,
receives trunked and conventional perfect, just has lost the bottom line.
I am actually surprised it works at all (the LCD), the crack is substantial.

# 2770. Alinco DR-600T Backup Battery

Newsgroup: rec.radio.amateur.equipment
Date: 2004-04-30 14:09:07 UTC
From: Tommy Martin <tmartin@xspam-tlmartin.com>
Message-ID: <76tkc.44818$Dn1.13503@fe2.texas.rr.com>
Source record: 21691

I believe the backup battery on my rig is going down. It will not retain the memory channels. I opened the rig to see if the battery was something I could replace but I cannot find one in there. Has anyone replaced the battery for this rig before? Where is the battery located?

I found a post on the web saying that it took the BR2032/1HE which is a surface mount battery but for the life of me I can't locate it.

Thanks for any assistance.

Tommy

# 2771. Ten-Tec Omni VI TX/RX switching problem

Newsgroup: rec.radio.amateur.equipment
Date: 2004-04-30 16:27:18 UTC
From: "Odd Erling N. Eriksen" <odderi@pvv.org>
Message-ID: <c6tup6$9cp$1@orkan.itea.ntnu.no>
Source record: 21692

Hi,

I just experienced a problem with my club's Omni VI - after unkeying it, the receiver stays muted for a few seconds before returning to normal RX mode. The transceiver keys down - I can hear the relay switch the very same instant I let go of the PTT button, and no RF leaves the rig according to the Bird meter - but the RX audio does not open until several seconds later. The problem is the same regardless of mode. Resets have no effect.

Any suggestions, before I remove the top panel? Perhaps it is simply a bad solder joint on the RX mute line pull-down resistor? (I assume Ten-Tec has implemented the TX/RX delay in the simplest way imaginable - using a cap to keep the RX mute signal high for a ms or so after unkeying the transmitter?

Thanks,

--

SX-28 from estate - VG condition and plays well - $350.00.

Pick up in St. Louis, Mo - unless you know an easy ship method...?

Thanks -

John.

# 2773. Panasonic RF-4800 info wanted for repair.

Newsgroup: rec.radio.amateur.equipment
Date: 2004-05-01 00:11:27 UTC
From: Al Bolton <al.bolton@ntlworld.com>

Hi all,
I'm attempting to fix a (National) Panasonic RF-4800 receiver for an old chap here. It is dead on the 2nd short-wave band set although it works OK on MF/LF and FM now. Seems like the local oscillator(s) isn't working which isn't too difficult
normally BUT unfortunately, he allowed the internal batteries to leak everywhere, so it could be a long job getting it right again. I don't mind doing this but I have absolutely NO info on the set, so a schematic or manual would be VERY welcome! Most happy to pay for a photocopy. The RF-4900/DR-49 set is very similar and a schematic or manual from this set would be OK as well.

Cheers,
Al Bolton, G4VSQ

Tommy.... the battery is located in the control head. Take the back off the head carefully, and you will find the battery there at the end opposite the big knob.

It is a solder-in type, and these are available from Mouser and others, although the shipping will probably be more than the cost of the battery.

Good Luck...

# 2775. JRL-2000F 1KW SOLID STATE HF LINEAR AMPLIFIER

Newsgroup: rec.radio.amateur.equipment
Date: 2004-05-01 01:36:03 UTC
From: acannell@wwc.com
Message-ID: <51ca721c.0404301736.18db2f5@posting.google.com>
Source record: 21695

For Sale:

JRL-2000F 1KW SOLID STATE HF LINEAR AMPLIFIER

Manufacturer: JRC (Japan Radio Co., Ltd.)
Model: JRL-2000F

Operating freq. range: 1.8, 3.5, 7, 10, 14, 18 & 21 MHz (24 & 28MHz
ant. tuner only)

Rated Output Power*:
SSB 1KW PEP, 100% duty cycle, 24 hour
CW 1KW 100% duty cycle, 24 hour
FSK/SSTV 1KW, 100% duty cycle, 1/4 hour
*at 220VAC

Output impedance: 50 ohm unbalanced, VSWR 3.0 (16.7 to 150 ohm)
Harmonics: -60dB or less
IMD: -35dB or less below PEP (at 1kW output)
Input impedance: 50 ohm unbalanced
Exciting power: 100W max.
Frequency switching time: 0.1 second
Power supply voltage: 85 to 264V AC, single phase
Power consumption: 2.5KVA or less (at 1KW output)
Input power factor: 95% or more (at 1KW output)
Temperature range: -10 to 40 C

Protection circuits: PA excess current, PA overheat, PA abnormal load
AC power supply excess voltage, power supply overheat, PA failure,
excessive antenna VSWR, exciting power excess, antenna matching
anomaly

Dimensions: 430 x 300 x 402 mm

Weight: 28kg

48 power mosfets
SEPP-type low distortion power amplifier
fully automatic antenna tuner
four antenna automatic antenna selector
automatic frequency counter system
high efficiency power supply with internal power factor corrector

I have powered the unit up and gotten more than 500W output power into
a dummy load. I have inherited this unit from my grandfather. He
barely used it after buying it.

Cosmetic condition: Excellent. This unit has seen very little use and comes with the remote control.

Make an offer!

Location: San Diego, CA, USA

I will ship worldwide. Buyer responsible for all shipping charger and duty taxes. I normally sell on ebay but in this case I dont want to pay the several hundred dollar ebay and paypal fees. I have a flawless ebay feedback rating and have sold several high price items. My ebay id is arccra

My email address is: asa@wwc(NOSPAM, REMOVE THIS).com

Please email me any questions.

# 2776. Help with mfj 1270B

Newsgroup: rec.radio.amateur.equipment
Date: 2004-05-01 07:48:56 UTC
From: google@sale-net.com.au
Message-ID: <6a3f6a71.0404302348.5f644426@posting.google.com>
Source record: 21696

Hi all.

I just picked up a couple of MFJ 1270B's. I want to be able to simple send anything recieved on the serial port via radio to the other one and then have it send it to my PC. Thats it.

So I fired them up with a terminal software connected to each one. I then typed TRANS as I thought this was what I needed. Ok I type in some charecters on on. It waits a few seconds after I type and then the unit transmits the data.

The DCD light comes on over at the second unit but nothing shows up on the terminal screen.

However if I leave it in the default mode which I think is called CONVERSATION MODE I get the line

cmd:NOCALL>CQ <UI R>:THIIS IS WHAT I TYPED

so I know it is transmitting it.

What am I missing. Are these units not capable of doing this? I need the recieveing unit to be able to transmitt back so do I have to switch modes etc?

MAybe these units are too old to do what I want..
Any help appreciated...

# 2786. Kenwood TM-G707a program problem/bug

Newsgroup: rec.radio.amateur.equipment
Date: 2004-05-01 15:27:42 UTC
From: kc2mbv@arrl.net
Message-ID: <21a0ba13.0405010727.a43aa04@posting.google.com>
Source record: 21606

I downloaded the Memory Control Program for the 707a from Kenwood. It has, what is for me, a severe limitation or bug. The program refuses to accept any frequency above 469.995 thus forcing me to manually program every memory channel. (I monitor frequencies around 486 MHz.) I wrote to Kenwwod support who confirmed the problem, but they left me to believe that they will not be rewriting the software.

Does anyone know of any 3rd party software for this unit or if there's work-around?

With thanks,

Frank.

# 2787. Re: Icom 730 Preventative Maintenance Questions

Mike,

I also purchased an older 730 last year and Icom had the relays and the transistor. You may not need to replace the parts at this time as some have suggested, but you may want to purchase the odd piece parts before they are no longer available. I think the relay was about $15 and the transistor was about a buck.

Free, for pickup only.

Ham Radio Equipment (Looking for a good Home): FM 2-way radio Base station.

Equipment is located in Berkeley California.

RCA 70 Watt 30-50 MHz FM base station.

This was removed from commercial service circa late 1960s.
It can be converted for use in the 6M amateur radio band.
(Does this band still exist??)

Transmitter:

70 Watt RCA MI-316008 FM Transmitter. Type: CT-10B

Receiver:

RCA MI-31451 Receiver Type: CR-15A

It is vacuum tube technology.
It is housed in an enclosed rack cabinet.
approximate dimensions:
63"H X 22.5"W X 30"D (including front and rear handles).

There are two mA meters on the front panel:
Grid current: 0-20mA,
cathode current: 0-300 mA

Also some misc. electrical / electronic equipment.

Thanks.

Please Contact: (Doug Williams) dougwilliams@[nospam]covad.net

I have the following items for sale. Prices do not include shipping. I will ship overseas.

External Matching Speaker for the Knight R-100 Receiver.....$45 plus shipping
Cosmetically excellent with no dings or scratches. Logo is rough but itï¿½s just a sticker.
http://members.cox.net/radiostuff9/knight_speaker.jpg
http://members.cox.net/radiostuff9/knight_speaker2.jpg

Electrovoice Model 623 Microphone - New in box.....$125 plus shipping
This is a Hi-Z dynamic mike with instructions and cable.
http://members.cox.net/radiostuff9/ev623_mike2.jpg
http://members.cox.net/radiostuff9/ev623_mike.jpg
http://members.cox.net/radiostuff9/ev623_mike3.jpg
http://members.cox.net/radiostuff9/ev623_mike4.jpg

National ACN Dial.....$35 plus shipping
This appears to be NOS and includes the instruction sheet but the coupling which mates with a quarter inch shaft is missing. That part could be removed from another National dial.
http://members.cox.net/radiostuff9/National_acn.jpg

Eico 249 VTVM.....$25 plus shipping
Clean and working unit with a nice large easy to read meter. Meter has a small crack on the lower left side and their is a scuff across the meter face. No probes but has a connector so you can build your own. Includes a photocopy of the manual
http://members.cox.net/radiostuff9/eico249.jpg

Westinghouse AC Voltmeter.....$35 plus shipping
This meter in a heavy bakelite measures 0-150 volts and the ranges are changed by making the appropriate connections to the meter. The ranges are: 1, 5, 15 and 150 volts. This is a working unit in nice condition.
http://members.cox.net/radiostuff9 west_meter2.jpg
http://members.cox.net/radiostuff9 west_meter.jpg

Precision Apparatus Series 85 VOM.....$20 plus shipping
Vintage well built VOM. Tested and working.
http://members.cox.net/radiostuff9/series852.jpg
http://members.cox.net/radiostuff9/series85.jpg

Brown Portable Potentiometer - Honeywell Artifact.....$40 plus shipping

This was made by Minneapolis Honeywell in Philadelphia. Never knew they were in Philadelphia so this must be pretty old! I would guess that this is from the 1920's or 1930's. According to the instruction card, "this instrument is for checking potentiometers and thermocouples. It can also be used for checking millivoltmeters and other sources of electromotive force within its range. The range of this instrument is 0-71 millivolts DC." The instrument itself appears to be in excellent condition. The instruction card does have a water stain and and leather handle is coming apart.

http://members.cox.net/radiostuff9/honeywell_artifact2.jpg
http://members.cox.net/radiostuff9/honeywell_artifact3.jpg

VHF Probe Detector - RF Labs Boonton, NJ.....$35 plus shipping
This is a piece of vintage test equipment, a VHF Probe Detector made by Radio Frequency Labs of Boonton, NJ. According to the enclosed data sheets, this was made in 1950. This unit covers 70-150 MHz. Includes the meter, all attachments and the wooden case. The original factory calibration sheets filled out by hand and dated November 1950 are still in the case. All appear to be in very good condition.

Well Peter, your first problem is transmitting without putting your
legal call sign into both units.

_After_ putting your valid call into both units, try putting them into
transparent mode.

Thanks Bob. First off I am not a liceance ham. I am using the radio's
and tnc's on a private network but I can make up a call sign.

Secondly I have tried it in TRANS mode. If I put the reciving unit in
trans mode, nothing is sent to the computer it is connected to. If I
leave it in command mode, then it sends the data to the computer...

Also I am interested to know if in trans mode, does it use AX25 to
send the data or does it simply send the data without any headers,
flags and crc? The reason I ask is I have a couple of MX614 modem
chips sending fsk stuff but I don't use the ax25 protocol. Will the
MFJ's be able to recieve it?

Regards, Peter

Source record: 21610

Several years ago there was a external plugin module marketed for the 706 series radios that provided a 10 watt carrier output from the radio. I have not seen them advertised lately and was wondering if they are still available since I'm planning on getting a new 706mk2G. Any info appreciated.

I will contact International Crystal to see what they have. What exactly was
the problem with the crystals that Yaesu provided for this unit. The one I have
came with almost all the available Yaesu crystals.

Not necessary for the 2g. It provides it's own tune signal.

Ken-

I purchased one recently from Amateur Electronic Supply for around $20-$25. They are made by another company, but listed under the IC-706 in their catalog price list.

I purchased it just "to have", as I normally use the AT-180 tuner. As I understand it, its purpose is to be able to use a non-Icom tuner.

That little module fakes a tuner being connected so the 706 series
outputs the 10 watt signal into something like a manual tuner.

The 706MKIIG will not go into tune mode without a tuner attached. Nor
will the 706MKII or the original 706.

Thanks.. I found the battery and replaced it. I am however still losing my memory channels if the radio sit's overnight with no power on.

I'm afraid something else has gone bad. I bet it will cost more to fix it than it is worth. I hate that. It has been a really good radio. I've had it for probably 10 years or so.

# 2803. MINT W2IHY THINGY

Newsgroup: rec.radio.amateur.equipment
Date: 2004-05-03 05:54:19 UTC
From: Butch <lynyrd@cableone.net>
Message-ID: <109bnkocettf28c@corp.supernews.com>
Source record: 21620

This W2IHY thingy is the 8-band Audio Equalizer and Noise Gate. MINT as in the real meaning of the word, just like it came off the assembly line. MINT. It comes with the wall wart and mic optional cable for Kenwood. Ready to go. Instruction booklet included (it's mint also) If you don't have a Kenwood (8) pin you can wire this to fit your rig if you know which 4 wires to use, PTT, GND, HOT mic and you are in business. 190.00 shipped CONUS. If not as described, ship it back, but handle it with gloves. Original Box

MFJ model mfj-1275 Sound Card Radio Interface, all cables, everything, again MINT or send it back 75.00 shipped CONUS Ogiginal Box

MFJ-841 2 Meter Handheld SWR/Wattmeter it too is absolutely mint. Take the antenna off your HT, insert this, add the ht's antenna to the meter and pussha PTT. 27.00 shipped Original Box

My favorite low power tuner (200 watts cw) and this model is also totally MINT. I take care of my stuff, my grand kidds can't play with my stuff they must use the so-so equipment along the other wall. Anyway this is the 200 watt MFJ-16010 transmit/receive. Many SWLers thought this was a receive only tuner, not so. It is easy tuning and hard working coax or longwire. If not as advertised send it back. 50.00 shipped CONUS. Original Box

MFJ-212 Match Maker for Tuner. Saves work and time and not putting out a signal while you tune away. Again MINT! 60.00 shipped conus. Original Box

MFJ-216 Delux Amplifier Saver (I scratched the bottom #&*%*^@!! 30.00 shipped CONUS. Original Box

If you are building a tuner, have most of the parts and they are either new or in excellent condition. Let me know what you need. I have a great cabinet for a tuner or power supply also. 50.00 plus shipping.

A-B Switch. Rough on the outside, beartifull onna inside works perfectly. 45.00 shipped

## 2805. ATV questions

Newsgroup: rec.radio.amateur.equipment
Date: 2004-05-03 11:44:16 UTC
From: achilles03@hotmail.com
Message-ID: <fef44ceb.0405030344.765cb20e@posting.google.com>
Source record: 21622

I am interested in getting involved with ATV, and have been having some trouble finding good info on the equipment needed.

from what I can understand, there needs to be 4 (or 5?) things between the video signal source (i.e. camera) and the receiving TV: the downconverter, (the pre-amp?), the transmitter, the receiver, and another downconverter... correct?

Also, from what I can tell, you're only supposed to transmit on specific bands. Is it possible to select a band where there might be less ATV traffic? What all would be involved in that?

Thanks in advance for any info!
Dave

Hi There

I'm thinking about buying the above mentioned radio. One of the reasons, is it's< abillity to be modified to TX on 70 MHz (4 meter).

Has anybody any experience with cutting D1 & D2, especially concerning the RF power output on 70 MHz after the mod. I've heard that is is only a few mW of output, but i find this hard to believe...

Looking forward to reading about your experiences...

Dean,

Try the Belton swapmeet on May 22 or Hamcom in June....usually a fair
amount of books turn up there. As for eBay, the prices on handbooks have
been really cheap for quite some time in my opinion. This is for all but
the
rarer early years, 40's and down.

good luck & 73,
Phil

Heck, I'll make you one for $10 + shipping. They aren't
that hard to make. As a matter of fact, I give them away to customers who
buy Carolina Cyclone antennas (screwdriver) antennas from me! I would make
'em for Kenwood TS50's but the plug is sort of funny and I can't
find any to match.

I've got 2 706's, each equipped with the little module. Works great!

> WA3MOJ

First, the circuit techniques for UHF receiver front ends and
transmitter PA's are totally different than those on 11 meters.
Conversion becomes wholesale replacement of about half of the radio.

Second, <<`ALL'>> CB radios must be type-accepted by the FCC for use
on the air. Unless you have the thousands of dollars for R&D, and
legal assistance to complete this, forget the whole thing.

What you are trying to do is tantamount to modifing a VCR into a
satellite uplink to jam television satellites. Can't get there from
here, No how, now way. Zip. Nada. The BIG goose egg.

Now you could use UHF commercial radios on the GMRS (former Class A CB
channels) with very little problem. Just change crystals or reprogram
the synthesizer in the radio, tweak, and you're in business. Any
competent two-way radio shop can do that.

I'd suggest you study a LOT more on basic electronic theory, and
circuit design before you post such an asinine question.

My trusted Amp Supply LK-500ZB got damaged after a lightning strike. I am looking to replace this HF amp (which used two 3-500Z tubes).

Any recommendations for a new legal limit HF amp?

What about the Amritron amps?
The AL-82 uses two 3-500Z tubes.
The AL-1200 uses a 3CX1200A7.
The AL-1500 uses the 3CX1500A tube.

In 10 years time, which tube will be easiest to get?

Any other manufacturers I should consider?

Rob
P.S. Since I do a lot of RTTY and SSTV, I am staying away from the solid state amps.

# 2814. Dumb questions - GMRS / FRS

Not sure if the subject is pertinent to this NG...
==========

I want to buy a couple "Talkabout" radios for various purposes to keep in touch with my son or girlfriend, notably while hiking, skiing and while at large events (airshows).

What *is* needed and what is fluff?

How congested are these freqs these days?

What models have the best range?

Any general comments welcome.

Cheers,
Alan

I bought a pair of FRS units at a local flea market.
They are GREAT for keeping in touch with the YL at Home Depot...when I'm looking at hammers, and she is looking at flowers...It even worked once when I was in the home depot, and she was in the Target's next door!
No congestion at all.
But....
When we were at Disney, it was tough to find a clear channel, and there was always someone suddenly talking while we were in mid chat!
Also great to have when you are following someone else in separate cars!!

Take a look at the Acom. I have the 2000A and run RTTY full power in
contests. My coax gets warmer than the amp :.) It uses the Svetlana
4CX800A tubes, which are reliable, readily available and inexpensive.
If you don't want to spend the big bucks for autotune, etc. look at
the 1000.

> What *is* needed and what is fluff?

They really don't come with much fluff. If you're operating in remote areas, I suppose you don't need to have all 14 channels and all 32 ctcss tones, but most come with the whole thing anyway. Just look for cheap. I saw a pair of FRS radios at Fry's Electronics in California yesterday for under $10.00.

> How congested are these freqs these days?

Might be congested if you were on a cruise ship or some large sport event or similar crowd; otherwise finding a clear channel shouldn't be a problem.
>
> What models have the best range?

The units that are ALSO GMRS capable probably do. However, technically, you must have an FCC GMRS license to operate these. Bet you a dollar to a donut that 99% of the buyers of these units don't. While I don't condone unlicensed operation, I must say I haven't ever heard of the FCC issuing citations to FRS/GMRS HT owners for this infraction, yet.

Thanks. First time I have heard about Acom. It looks like they make very
high quality amps (like the Aplhas).

I have aasked for prices since there doesn't seem to be any on the Acom web
site.

I noticed the Alpha 99 also uses the 4CX800A tubes.
Which tubes are better -- the 3X1200A7 or the 4CX800A?

I read the entire outside of three different brands at Costco.
Twice each. There was no mention on any of the licensing requirement.
I'd be really surprised if it showed up anywhere obvious inside the
box either.

I'm willing to bet the FCC does no more about these things
than they ever did about the mess that CB became. And it has to be
hard to even locate these things -- I doubt the FCC will be out in
force trying to find them at football games, campgrounds, etc.

## 2823. Mobile Power Fluctuations

Newsgroup: rec.radio.amateur.equipment

that is definetally not normal. do you have a SWR meter ? or any kind of meter you can attach to the radio to see what is coming out of it ?

how is the 242 on receiveing in comparison to the ht ?

From: David J Windisch <davidw@copper.net>
Message-ID: <40977114_4@newsfeed.slurp.net>
Source record: 21635

Hi, all concerned:

A while ago, several people were kind enough to send me info on possible sources of replacement for the 1N23-sorta-lookalike diodes for the h-f pickup, specifically, and carelessness has caused me to lose the info.

The diode needing relacement is labeled " ALPHA D4190A ".

Cursory google-ing yielded nothing useful.

The thing is a good-enough, if not excellent, device, for my purposes, and this time I *really* want to get it operating.

Pls be kind enough to send it to me once more.

TIA & 73, Dave, N3HE

Source record: 21636

Hi, Since you are new to the hobby (congratulations) is your antenna correctly mounted (grounded OK)? How is the coax cable run, could you have "pinched" it
or cut it pulling it through metal parts of your car, maybe causing a short in the cable?
It sounds like it is an antenna issue. It sounds like the radio is folding back it's power
for protection. If you don't have an swr meter, get one or borrow one. Also, see if you can borrow a magnetic mount antenna for a quick test. If that works OK then it is an antenna / coax problem. One more thing you can try if your antenna seems ok.
Add a small coax jumper (a foot long or so) between the radio and the antenna coax. Once in a blue the added length of coax can cure some SWR problems.
73 and good luck!!

What is the gauge of wire (for power) you have feeding the
transciever??? and how long???

Where is your power lead hooked in??? Is it hooked into the battery or
do you have it running through the fuse panel????

I have an SWR meter but it is for 10/11 meter only. I think I discovered "half" of the problem.. The power cable was passing directly over the antenna coax. I separated them with about 6 inches of space and the radio now hits many more repeaters than my HT, however the power meter still only goes up half way. The receive is very good. I am able to pull in all of the Wx channels on 162.xx.. Can't even do that with my scanner and an attic antenna. The 1/2 of the bars when transmitting still bugs me though..

12 feet of RG58, plugged into the cigar lighter using one of those
radio shack adapters. I tried hooking it directly up to the battery
and had the same problem. Also hooked it up to a 10Amp power supply.

If you are in Canada it's a different ball game as to what is
allowed and what is not compared to the US radio regs.

Rob:

The 4CX800A tubes are far more cost effective than the 3CX1200A7.
I bought a tested pair of 4CX800As from Alpha for $221; the new
prices for the 3CX1200A7 are ~$800. The 4CX800As seem tough
and work well in my Alpha 91b amps.

I've used the AL-1200 (we have one at the PJ2T contest station). The
3CX1200A7 is an "instant on" tube (like the 3-500Z), and requires
nearly 100W drive for full output. It's considerably noisier than
the Alphas. The AL-1200 is a BIG package.

The Alpha 91b/99 requires a 3 minutes warmup time, and requires
about 45 watts for full output. I consider this lower drive requirement
a plus, since it means that my transceiver runs cooler during a contest.
The Alphas have much better circuitry to protect me from errors made
when I'm tired and/or in the 'heat of battle'. It's considerably better-
built mechanically than the AL-1200.

There are other manufacturers making amps with the 4CX800A, and
any of these would be a good choice.

RG-58 center conductor is pretty small diameter for the 10 Amps needed at 45 Watts. Also, cigarette
lighter plugs have very poor central contacts. If you have a voltmeter, DVM, etc., try measuring
the DC voltage at the radio while transmitting. If it drops much from the 13.8 Volt battery
voltage, the power out will drop drastically. For a proper installation in a mobile, you should run
two #12 wires directly to the battery terminals for positive and negative. Don't depend on a ground
wire to the car body for the negative. And include fuses in both leads at the battery. This might
seem like redundancy, but it will protect the radio from being burned up by stray currents if the
chassis ground comes loose. 73.

You are using RG58 coax as a power lead????? Through a cigarette
lighter plug????

That is probably 99% of your problem. A 45W radio is probably drawing
10 amps or so. You need to completely rewire the power lead using at
least 12 ga wire (NOT COAX). It needs to be fused on BOTH leads AT THE
BATTERY. A cigarette lighter power connection should not be used for
more than 3-4 amps.

I would suggest you get with someone experienced an knowledgeable about
installing communications equipment in vehicles and get their guidance.

I would be surprised if your VCO even locked up when you were running
high power.

That's probably your problem. The conductor size in RG58 is
teeny-teeny for a transmitter that is 'sposed to put out 45 W.

Get rid of the RG58 for the power lead and get yoursrelf some
16-gauge red-black Zip cord. Most ham radio stores or trailer.RV
places should have it. Run it directly to the battery with fuses in
both leads at the battery. I run mine through a fused headlight
relay next to the battery so I can control it with a simple
on-off-on switch (hot-off-accessory). It will make all the
difference in the world.

Your using RG-58 to power the radio?
BAD idea. The wire inside is very small and won't be able to handle the
current the radio needs to run at full power.
Use at least 18 gauge wire or better yet, 16 gauge for BOTH plus and minus.
Don't forget to put a fuse on BOTH wires.
Give that a shot and report back.
73

# 2847. Dumb Questions - Part II FRS

Newsgroup: rec.radio.amateur.equipment
Date: 2004-05-04 19:56:33 UTC
From: Alan Browne <alan.browne@FreeLunchVideotron.ca>
Message-ID: <RzSlc.9338$oJ2.72804@weber.videotron.net>
Source record: 21554

Again, I'm not sure how well these questions match up to the group here...

The claimed range of these radios (FRS) is on the order of 2 miles. The manufs mention terrain and weather as limitations.

How do they do in a wooded (flat) environment?

How do they do in a suburban (moderately large houses, otherwise flat) environment?

How do they do in the city? Are they multipath prone?

What weather conditions are worse? I assume heavy rain, but does fog affect them? Will lightning a few miles away interfere with them severely?

Thanks again,
Cheers,
Alan.

<< The claimed range of these radios (FRS) is on the order of 2 miles. The manufs mention terrain and weather as limitations.
How do they do in a wooded (flat) environment? >>

Heh....I LOVE those claims! Two miles...in a vacuum and direct LOS (line of sight)....yup. Normal terrain? 1/2 mile to 1 mile for the typical FRS units. The GMRS units will do better, as they're higher power out....but the licence is $75 in the US...not sure what the deal is in Canada.

MURS (if legal in Ca.) is another good choice....if you can find the units. FRS units are ubiquitious....MURS less so. The difference is frequency...MURS is in the 155 mhz range, FRS is in the 462 mhz range. MURS also has no licence requirements here, IIRC. They do well LOS and better than FRS (in my opinion) non-LOS. I picked up a set of cheapie RatShak MURS mobiles and have had as much as 10 mi. between them with decent reception. (external antenni) Don't know how MURS is handled in Canada, do check with the local authorities.

Cheers;
A

" I finally got them to answer and quote me a price on a new battery for my DJ-C5. The radio retails for something like $125. The battery, with shipping, ends up at about $60. OUCH.."

I guess you are unfamiliar with current Amateur prices!
Every Single HT being sold for under $200, by every mfgr is similar in this regard. For example, the "Direct Yaesu" price for a replacement battery for their current $125 VX-150 2M ht is $59 + shppg, bringing that one closer to $70! You'll probably still pay $50 even from a "discounter", for that original Yaesu Battery.
The Icom T2H, which sells for $99 nwe, has a stock battery cost of $45 + shppg from Icom Parts Dept! The DJ-C5T currently sells for about $160 new at discount, & the battery is about $50-60 shipped, so it's no worse than any others. It's kind of like calling Epson's Parts dept for the price of a replacement Head for the $109 inkjet printer you bought 2 years ago, or calling Panasonic & asking how much a new motor or head would be for the $120 VCR you got at walmart... I'm sure these single parts would be at least half the cost of the item as well!!

Many thanks for the info. Yes, noise is always a factor to consider. Too bad most of the specs for amps do not list the noise in db!

If you can think of any of manufacturers, please post them. The only manufacturers of amps I know of are Alpha, Ameritron and Acon. (But Ameritron does not seem to make amps wiith the 4CX800A tubes). I am sure there must be other manufacturers I should consider.

Other American makers: Ten Tec, Command, QRO, Henry. (See their web
sites.)

Also, Icom and Yaesu.

The old Heathkit amps are still very popular, and quite inexpensive
compared to the new stuff. See eBay or ask around.

Rob....
The previous post is a good one, with all the web sites.
I also like the Acom amp, the 1000 version. But it is made offshore, and may be a pain if
a problem develops.
The TenTec Centurion is a nice amp, with a pair of 3-500's...and QSK if you are in to CW.
Same with the QRO, but looks a bit more 'home-made'
Ameritron is now an MFJ company, isn't it? nuff said!

The VX150 battery can be had for around $35-40. Never mind that (and never mind printers).

This is not a "battery pack" but an internally mounted device that has no other supplier. This is a part, a device. You can't go to one of a dozen or so battery suppliers and order one up. You are dependent on Alinco. Alinco is having a VERY difficult time maintaining parts. The costs of the parts is unusually high. This makes the problem significant to anyone who might hope to fix an Alinco themselves. I hope that made the problem clearer.

That being said, I suspect I'll buy another DJ-C5 at Dayton.

The TenTec Titan 425 uses a pair of 3CX800A7 and is a great amplifier if you do CW as your main mode since it does perfect QSK. The power supply is separate from the amp itself so you can actually have it on a table in the shack without it taking up too much space.

Bonjour,

A l'intention de ceux qui veulent acheter ou vendre du mat�riel R.A., � l'inverse d'ebay.com qui va jusqu'� reprendre les noms de chaque constructeur dans la rubrique /Consumer Electronics/ Radios... / Ham radio, aujourd'hui, sur ebay.be ou .fr cette rubrique n'existe pas et les produits radioamateur sont diss�min�s un peu partout, par exemple dans la rubrique /T�l�phonie/Autre.

Pour ceux que cela int�resse, j'ai demand� � Ebay de cr�er une sous-cat�gorie /Radioamateur (ou �ventuellement de l'incorporer dans une rubrique /Radio, radioamateur, CB, etc ou encore de changer la rubrique /"Radio", TV, Hi-Fi,...) et de cr�er �galement les sous-cat�gories transceiver ou �metteur-r�cepteur, r�cepteur, antenne, amplificateur, livre et magazine, autres.

Bonne nouvelle, la r�ponse a �t� positive !

Le changement devrait �tre effectu� sous peu

---

Hi,

Contrary to ebay.com there is no /Radio,.../Ham Radio category on Ebay.fr
and Ebay.be yet.
I asked for this change and both sites answered positively
The change will be effective in a few days.

I don't remember the names of the companies, but I have seen at least two
companies advertising ready to go ATV systems in QST I believe. Or just do
a Google search for ATV, or ham television, etc.

>
> Also, from what I can tell, you're only supposed to transmit on
> specific bands. Is it possible to select a band where there might be
> less ATV traffic? What all would be involved in that?

Most Amateur ATV systems operate on either the 430 band or the 1.2 ghz.
Some ever higher I am sure. You see a TV signal is very wide and requires a
large bandwidth. So it can only be used in the higher UHF ranges. The
higher in frequency you go, the less activity. Go get a 10GHZ gunplexer
for the RF end of things. That is basically line of site stuff there.

The ham equipment today consists of stand alone convertors and transmitters.
So you really just need that box and a TV set to plug into. Antenna of
course and a ham license of Technician or higher.

Hope this helps. If you would let us know more of what your needs are
perhaps a more specific approach could be discussed.

Dan/W4NTI

## 2868. Cable for TM-733 face

Newsgroup: rec.radio.amateur.equipment
Date: 2004-05-05 21:37:11 UTC
From: Tommy Martin <tmartin@xspam-tlmartin.com>
Message-ID: <b8dmc.66899$NR5.59200@fe1.texas.rr.com>
Source record: 21567

I am looking for a remote cable to mount the face plate away from the radio.
The part is DFK-4B and kenwood will not sell them any longer nor any of the
usual dealers that I have found.

Does anyone know where I might find one of these?

Standard C468A 95% $100
Includes 1 CWC150A Wall wart

PacComm Sprint-2 TNC Like new,
With AD-4 Analog-to-Digital board
With cable for Kenwood TM451A $100 obo

Icom 02AT with BC-35, stock battery and wall wart.
And extra Ice brick battery $ 75

Maha MH-C777 Universal Charger-Conditioner LNIB $ 30

Dynamic Communications
Model A470-25 $ 20
Sold as is, no manual.

Model 10-0 $ 20
Sold as is, no manual.

Carver Audio Amp 95+%
Model M-2120
With Manual. $ 75

All Items Will include manuals, and any docs that I Have.

I have a lot of older computer parts/MOBS-CPUs/boards
ect. Everything from Rll,MFM to SCSII controllers.
contact me for what you are looking for.
I have an External Scsii CdRom changer that uses Pioneer
carts.

I also have a lot of C64's 3 good 3-5 fixable or parts.
Much peripherals - drives,printer,parallel/serial ports,
modems, tape drive, graphics pads, joysticks, ect.
AND a lot of cartidges, and software - games to productivity.
Included is all manuals, plus extra books for programming ect.
Included is software to run a bbs from the C64..
I would like to sell it all as one group. Will cost more,
if sold piecmeal....

$150 takes it all on the C64 equipment.

I will be at Dayton next month, so you can save on the shipping.
Contact me ahead of time for arrangements....

Shipping is NOT included

Hi

I bought a PA-module made by Clairemont Industries, San Diego, Cal,
USA at a local hamfest. The type number is Ci-110, and it is marked
49mhz (49 MHz). It uses two SD1446 in push-pull, at 13.8V.

I believe there is a CB version of this amp as well.

Can any of you help me with schematics and/or specifications?

I have the following items for sale. Prices do not include shipping. I will ship overseas.

Set of James Millen Wavemeters with the original storage case.....$60 plus shipping
The units and case are in excellent condition. The unit numbers and frequency ranges are as follows:
90605.......3-10 MHz
90606.......9-22 MHz
90607.......23-60 MHz
90608.......50-140 MHz
http://members.cox.net/radiostuff9/millen_wm.jpg
http://members.cox.net/radiostuff9/millen_wm2.jpg
http://members.cox.net/radiostuff9/millen_wm3.jpg

External Matching Speaker for the Knight R-100 Receiver.....$45 plus shipping
Good sounding and cosmetically excellent with no dings or scratches.
http://members.cox.net/radiostuff9/knight_speaker.jpg
http://members.cox.net/radiostuff9/knight_speaker2.jpg

E.F. Johnson Brass Telegraph Key.....$40 plus shipping
This is a nice E.F. Johnson Brass Straight Key mounted on a heavy non-original copper base. The words E.F. Johnson, Waseca, Minnesota are stamped into the front of the base of the key. The key is in nice shape and should polish up nicely.
http://members.cox.net/radiostuff9/efj_key.jpg

Signal Electric Telegraph Key.....$35 plus shipping
This is a nice brass Signal Electric straight key. The words Signal Electric MFG, Menominee, Mich are stamped into the front of the base of the key. The key is in nice shape and should polish up nicely.
http://members.cox.net/radiostuff9/key1.jpg

J.H. Bunnell Telegraph Key.....$35 plus shipping
This is a nice J.H. Bunnell straight key. The words J.H. Bunnell, New York USA are stamped on the shorting lever. The key is in nice shape and should polish up nicely.
http://members.cox.net/radiostuff9/key2.jpg

Electrovoice Model 623 Microphone - New in box.....$125 plus shipping

This is a Hi-Z dynamic mike with instructions and cable.
http://members.cox.net/radiostuff9/ev623_mike2.jpg
http://members.cox.net/radiostuff9/ev623_mike.jpg
http://members.cox.net/radiostuff9/ev623_mike3.jpg
http://members.cox.net/radiostuff9/ev623_mike4.jpg

Eico 249 VTVM.....$20 plus shipping
Clean and working unit with a nice large easy to read meter. Meter has a small crack on the lower left side and their is a scuff across the meter face. No probes but has a connector so you can build your own. Includes a photocopy of the manual
http://members.cox.net/radiostuff9/eico249.jpg

Westinghouse AC Voltmeter.....$35 plus shipping
This meter in a heavy bakelite measures 0-150 volts and the ranges are changed by making the appropriate connections to the meter. The ranges are: 1, 5, 15 and 150 volts. This is a working unit in nice condition.
http://members.cox.net/radiostuff9 west_meter2.jpg
http://members.cox.net/radiostuff9 west_meter.jpg

Precision Apparatus Series 85 VOM.....$20 plus shipping
Vintage well built VOM. Tested and working.
http://members.cox.net/radiostuff9/series852.jpg
http://members.cox.net/radiostuff9/series85.jpg

Brown Portable Potentiometer - Honeywell Artifact.....$40 plus shipping
This was made by Minneapolis Honeywell in Philadelphia. Never knew they were in Philadelphia so this must be pretty old! I would guess that this is from the 1920's or 1930's. According to the instruction card, "this instrument is for checking potentiometers and thermocouples. It can also be used for checking millivoltmeters and other sources of electromotive force within its range. The range of this instrument is 0-71 millivolts DC." The instrument itself appears to be in excellent condition. The instruction card does have a water stain and and leather handle is coming apart.
http://members.cox.net/radiostuff9/honeywell_artifact.jpg
http://members.cox.net/radiostuff9/honeywell_artifact2.jpg
http://members.cox.net/radiostuff9/honeywell_artifact3.jpg

VHF Probe Detector - RF Labs Boonton, NJ.....$35 plus shipping
This is a piece of vintage test equipment, a VHF Probe Detector made by Radio Frequency Labs of Boonton, NJ. According to the enclosed data sheets, this was made in 1950. This unit covers 70-150 MHz. Includes the meter, all attachments and the wooden case. The original factory calibration sheets filled out by hand and dated November 1950 are still in the case. All appear to be in very good condition.
http://members.cox.net/radiostuff9/vhf_detector1.jpg
http://members.cox.net/radiostuff9/vhf_detector2.jpg
http://members.cox.net/radiostuff9/vhf_detector3.jpg
http://members.cox.net/radiostuff9/vhf_detector4.jpg
http://members.cox.net/radiostuff9/vhf_detector5.jpg

http://members.cox.net/radiostuff9/vhf_detector6.jpg

McMurdo Silver Model 900 VOMAX VTVM with RF probe...$20 plus shipping
This is from the 1940's and an interesting piece if you collect McMurdo
Silver equipment. Includes a copy of the manual. This unit is untested.
http://members.cox.net/radiostuff9/silver_vomax.jpg

Thanks for looking.

Source record: 21571

HI, I do not know that exact mic but what is usually in these mics is a micro switch that does the switching. These switches should be fairly easy to find if discovered bad. This should be easy to check with an ohm meter.
Also, some of these mics use a spring steel piece of wire that is used to release the micro switch and push back the PTT button. Sometimes that spring pops off it's housing and locks the micro switch to its pushed in position. This also is an easy fix.
Oh, one more thing, maybe the mic plug might have a broken wire in it causing the
transmitter to be locked.
73 and Good Luck

>I can't find a way to fix.

I used an Adonis table mic with the IC-229H that was in service for
20+ years, the last 120 years on a 24/7 basis until the panel lights
went out. I'm legally blind in one eye so fixing it myself is not
an option because I don't have stereoscopic close-in vision, and
Icom wants $75 to do the job for me.

For twice that I could buy an IC-2100H which has 100 channels
compared to the 229's 20 channels, same power, better "SET" options,
and includes a time-out timer.

And so I did, last weekend, and retired the 229.

As far as the transmit sticking - it's either a short in the plug or
the mic switch. Not too difficult to fix if you can see small details.

I hope that you can get it fixed.

Yes. Saying the range is UP TO 2 miles is like saying a lottery ticket
will win UP TO $1 million dollars.

In extreme circumstances, you might get a much longer range, but this
is more a fluke than something to count on. Terrain and architecture
will reduce the range further. Line of sight is what you will get

GMRS is not legal in Canada, the frequencies are assigned to another
service. FRS is perfectly fine.

From the OP:

>How do they do in a wooded (flat) environment?

reduced somewhat from above

>How do they do in a suburban (moderately large houses, otherwise flat)
>environment?

Architecture will reduce range, especially whatever contains metal.

>How do they do in the city? Are they multipath prone?

Various issues with metal structures. Assume reduced range.

>What weather conditions are worse? I assume heavy rain, but does fog
>affect them? Will lightning a few miles away interfere with them severely

Heavy rain may have some effect. As with any FM, lightning is far less
of an issue than with AM receivers.

>MURS (if legal in Ca.) is another good choice....if you can find the units.
>FRS units are ubiquitious....MURS less so. The difference is frequency...MURS
>is in the 155 mhz range, FRS is in the 462 mhz range. MURS also has no licence

>
Harder to find gear, but an option.

Since this is an amateur radio group, I will suggest that getting each
person in your group through the first level Technician license, or
the Canadan equivalent, and then getting basic 2M handheld units,
would be far more relaible and with greater range.

Happy trails,

I have a Yaesu V/UHF All Mode Tribander FT-726R for sale. It has two modules installed, VHF 144-147 MHz and UHF 430-440 MHz. The third module slot is currently empty. There is a satellite cross-band module in this radio, and it comes with a hand-held touch tone microphone. This radio is in spectacular shape, will sell for $500.00 Canadian. Please email me for more info or pictures. Thanks.

I think he meant he is using the cigarette lighter for power (though he also has hooked to the batteray and to a 10A PS), and he is using RG-58 [for the antenna] but he has not stated the gage of the power leads. Agree RG-58 would be a disaster for power lead for anything drawing over a fraction of an amp.

Heavy lines, directly to the battery, *both* fused, twisted for noise immunity, is the recommended procedure by several major auto makers for 2 way radio installations.

Thanks, I've never heard of MURS. I'll look into it. If I read the tea
leaves correctly, GMRS will be usable w/o a licence in Canada by the
fall. Might be worth waiting until then.

Cheers,
Alan

No.. Sorry I didn't read your question correctly.. I'm not using coax
as a power cable, I'm using it as a antenna cable. The power lead is
the one that came with the HTX-212.. red and black. I assume since it
came with the unit it should be ok.

But what tea leaves are you reading?

This sort of radio news is not the sort of thing we'd hear about in
the newspaper or on the local news. It might hit as such things become
legal, but I can't see much word about any impending rule change being
visible before the fact.

And after that, one has to judge the source of information. Tea leaves
aren't a good source. Even some guy saying somewhere that the rules might
change isn't a definitive source.

Now, if you actually go to the pertinent government site, then yes indeed
there does seem to be forthcoming rule changes to allow "GMRS" in Canada.

But that's not "tea leaves" or interpretation, it's an outright statement.

If you do a search on "GMRS canada" one site you hit is the Radio Amateurs of Canada website, http://www.rac.ca They happen to have a page about FRS in Canada, http://www.rac.ca/frs Now that page mentions GMRS and MURS, but states they are not legal in Canada.

But there's a link to the Industries Canada website, http://strategis.ic.gc.ca and if you go there and use "GMRS" for a search, you get this page: http://strategis.ic.gc.ca/epic/internet/insmt-gst.nsf/en/sf08144e.html which is a policy paper on the government's intention to allow GMRS. I've only looked at the synopsis, the whole paper is in pdf, but note that at the very least, there will be a changeover period because others are using that frequency range at the moment.

The Gazette notice about this, from March, suggesting it could come as early as September 2004: http://strategis.ic.gc.ca/epic/internet/insmt-gst.nsf/en/sf08145e.html

So one does not tea leaves, which also have a tendency to be wrong anyway.

I just bought a Panasonic NiMH charger that came with 6 AA's and 2 AAA's.
The AA's are marked "2100mAh" and the AAA's are marked "750mAh".
In teeny, tiny print -- in front of the claims for the mAh -- it
says "Up to". So, when they die and are completley useless, they'll
still meet Panasonic spec's....
Oh, well.
I bought the package for the charger anyway: 100-240 VAC, 50-60 cps,
with "fold-in" mains prongs. Just the ticket for travel. $20 at Costco.

In article <109fti638b089@corp.supernews.com>,
Steve Wolf <news@w8iz.com> wrote:

| Be careful what you ask for. I finally got them to answer and quote me a
| price on a new battery for my DJ-C5. The radio retails for something like
| $125. The battery, with shipping, ends up at about $60. OUCH.
...
| (Battery stores do NOT carry the battery. If anyone would like to prove me
| wrong, PLEASE do. See www.w8iz.com/ham/alinco )

I'm not going to prove you wrong, but I can make a convincing argument
that it's moot :)

Looking at your picture, this just looks like a standard Li-ion cell.
Li-ion cells are much more dangerous to `fiddle with' than NiCd or
NiMH, but since it's just a single cell (Li-ion and LiPoly cells are
3.6 volts/cell) and I don't see any electronics being part of the
battery pack, I think you can just replace it with another cell. It
doesn't have to be exactly the same size -- so something that's
physically a bit smaller would be fine. You may even get a lot more
capacity for the same size.

I don't know how large your battery is (can't tell from your picture)
but I'm guessing that you can find a comparable LiPoly cell for under
$15 -- then it's just a matter of soldering your old connector onto
the new cell. (You will need special zinc/tin solder to make it stick
to the aluminum tabs.

One place that might sell a sutiable battery would be these people --
http://www.unipros.com/cbpsite/mainasp.asp .

One more thing about Li-ion and Li-poly cells -- they can be
dangerous. Overcharging or over-discharging them, or damaging them
physically can cause them to catch fire. Your radio should have the
circuitry to prevent both, but if it's on the battery itself (doesn't
look like it is, but I can't be sure) you'll need to add it to the new
pack.

I rarely buy new battery packs for items. Instead, I make my own --
just recylcing the parts of the old pack. Saves lots of money.

My answer still stands. A cigar lighter adapter should not be used to power any radio over 3-4 amps (personal opinion). A 45 watt radio is going to draw somewhere in the neighborhood of 10 amps. You should run 12 gauge wire directly to the battery and fuse both leads at the battery, or conversely, if you absolutely insist on using a cigar lighter as a power source, then switch your radio to the lowest power setting it has. If it is anymore than 5-10 watts then you should not be using the cigar lighter as a power source.

> another downconverter... correct?

Depends how complex a system you want, the bands used, etc. ATV on 420
mhz can be quite simple. I have a small homebrew transmitter and
receiver a friend of mine built, that can work 420. Do you have a
cable ready TV? You already have a 420 ATV receiver, IF you use a good
gain type antenna. Many ATV repeaters are on cable ch: 57, 58,
etc...You use a regular TV antenna, but set the TV itself to "cable".
I have a 25 element rat shack corner reflector yagi I use for that.
"standard UHF TV antenna". 1.2 ghz and up starts getting to be a
little more involved, but usually better picture quality in general.
>
> Also, from what I can tell, you're only supposed to transmit on

"less traffic" than what? Also .. who do you plan on transmitting to??
There has to be *some* traffic on the channel or you'll be talking/looking
at yourself;-)

Find out what ATV activity is happening in your area. Find out what bands
/ freqs / modes they use and get the same equipment and go from there.

Kenwood TS-680S 160-6 Meter Transceiver & Kenwood PS-50 Power
Supply......$425 plus shipping

This radio covers 160-6 meters and will operate SSB, CW, AM and FM. The
radio works great putting out around 110 watts on 160-10 and 10 watts on
6 meters. It will also work FM on 10 and 6 meters. The receiver is
general coverage covering 500 kHz to 54 MHz. Cosmetically the radio is
very nice and has never been mobile. The power supply has some scuffs
along the sides. Includes photocopies of the operator's manual and the
power supply manual. It does not include a microphone. This was tested
with borrowed Kenwood Microphone.

Free, for pickup only. This equipment is located in Berkeley California.

FM 2-way radio Base station.

This equipment can be re-tuned into the 6M ham band.

RCA 70 Watt 30-50 MHz FM base station.

This was removed from commercial service circa late 1960s.
It can be converted for use in the 6M amateur radio band.

Transmitter:

70 Watt RCA MI-316008 FM Transmitter. Type: CT-10B

Receiver:

RCA MI-31451 Receiver Type: CR-15A

It is vacuum tube technology.
It is housed in an enclosed rack cabinet.
The transmitter and receiver are on separate panels mounted
on rails in the center of the rack cabinet.

Rack approximate dimensions:
63"H X 22.5"W X 30"D (including front and rear handles).

There are two mA meters on the front panel:
Grid current: 0-20mA,
cathode current: 0-300 mA

The other misc. equipment includes:

1. 4 variacs mounted in a ventilated metal box.
They were probably part of some light dimmer.
(dusty / dirty and in unknown electrical condition)

2. some Antenna insulators.
3. several power transformers.
4. some oil filled capacitors. (probably PCB oil).
5. Some selsyn motor transmitters/receivers. I don't remember the
voltage / frequency spec on these.
6. some small induction motors with fans.
7. some small relays.

Sorry for the vagueness but this equipment is at my fathers house in
Berkeley,

and I am in San Jose. We are trying to clear out the house to get ready
to sell it.
If no one is interested I will probably remove the tubes and meters, and
junk the rest.

Thanks.

remove the [nospam]

# 2899. Kenwood TM-G707A program question

Newsgroup: rec.radio.amateur.equipment
Date: 2004-05-08 02:51:46 UTC
From: Ed <Spectrumhog_REMOVE_@Starband.net>
Message-ID: <Xns94E2CA0533432SpectrumhogStarbandn@63.223.5.248>
Source record: 21503

I need fast help. How do I put the Kenwood TM-G707A into program mode so that my computer and interface cable can read and program the radio? I seem to have forgot and can't find any reference to this in the manual.

Ed

Welcome to the wonderful world of consumer electronics - this parts cost/supply applies to just about EVERY mass produced consumer item - why are you surprised? Intense competition in the marketplace means the margins on the radio are close to zero, supply spares (and running a spares opeation) costs money, which has to be got back somehow. Are you really astonished at the price - its probably realistic if you do the sums.There will be aftermarket replacements, this is part of being a radio amateur, you just hunt around until you find them. The radio makers will probably thank you, they dont need to have dead money in spares or pay someone to answer email and phone queries.

Lets be realistic here people, the days of high profit margins are gone and thus the ability to subsidise spares/service operations is gone too. Look inside most modern AR gear, repair will be by board replacement, but at $115 you will chuck it and buy the "Newest, greatest ever model..."

As a service tech, I look at the purchase price of the item, and if its dirt cheap then I cant afford to spend time chasing the fault if it isnt quick and easy - otherwise I wind up working for $2/hr - and I am not prepared to do that. Sad but true - I have to pay the electricity bill like everyone else.... experience and rat cunning means I can often do repairs cheap as I have worked out where to 2nd source components - I dont want to wait for unanswered phone calls or emails either!

```

Thanks for the reply. That page describes cloning, not computer programming. However, I discovered the answer shortly after posting the orignal question and I then sent a cancel command to my post. Apparently you caught it before it was deleted. I found out that there is NO program condition required for the radio when programming with a computer and the PG-4S cable. I just plugged in the cable and was able to read and write to the radio with the computer without putting the radio in to any special program mode.

Again, thanks for the help.

You talking about ham radios? Did Yaesu make ham radios in the 50s? I had an IC-2F in the late 60s... I thought that was one of the first ham radios they made.... in VHF anyway, although I know there were some very nice HF rigs made in the mid 60s.

But your assuming that what we saw in North America was their earliest
product. I'm not sure, but it's likely there was equipment that only
appeared in the Japanese market (or in other parts of the world) that
we never saw. Or, it may have appeared on North American shores, but
under a different name.

Ditto Nitespark reply,

just like to add, upgrade to #10 ga wire, worth the few cents price difference and no power drops. That way you can alway power a few other items off a rig runner or equal item.

Try to get a set of powerpole by anderson, they are inexpensive and make things easy to power.

pappy.

Actually, I was on Okinawa at the time. The first 2M rig Yaesu exported didn't come out until 1968, the IC-2F, and their very first exported HF rig was the FT-100, I believe, which came out only a couple years earlier. Their very first ham rig probably came out around 1960, the FL-10, a single bander 40M Xtal controled TX. The Yaesu Musen Co. was apparently founded in 1959, though some sources site much later.

Do a Google search on Yaesu history. It can be interesting.

Hah! I gotta correct myself! I thought you were looking for Yaesu gear made in the '50s. I wasn't aware of the "50" series when I first replies here. I am now. Made in the mid 60s, and pretty neat looking stuff. Sure advanced for its times. Good luck in finding some. From my WEB browsing, it looks like Australia and Japan would be your best bet.

The Icom IC-7800 is already available (at almost US$11,000). Yaesu is advertising the FT-DX9000. So what are we talking about? A Kilobuck Kenwood?

BTW, has anybody heard anything about an updated IC-706MkIIG or a replacement for it?

# 2933. Help please with a Motorola MicroMC

Newsgroup: rec.radio.amateur.equipment
Date: 2004-05-09 16:26:46 UTC
From: andyj81@hotmail.com
Message-ID: <4c7b2e78.0405090826.3eda01f0@posting.google.com>
Source record: 21537
Cross-posted to: rec.radio.amateur.equipment,de.comm.ham,aus.radio.amateur.digital,rec.radio.swap,uk.radio.amateur

Hello. Thanks for reading this.

I have a Motorola MC Micro, and am able to program it using a slow 286
PC.

The problem that I now have is this when trying to read the radio
after I have made changes,
I get an error displayed "ERROR : UNKNOWN REFRENCE DIVIDER"

I have no instructions, but have found a file called REF_DIV.001 which
is a text file
containing :

5kHz 6.25kHz Refrence divider
$1681 $1201 Standard refrence divider Fref=14.4Mhz
$1401 $1001 SP refrence divider Fref =12.8Mhz

Looking inside the radio there is a can displaying part number :
KXN1123AA and a frequency
of 14400000Hz - Is this my refrence frequency of 14.4MHz ?

Do I need to edit this file, or is it wrong in some way ? Can anyone
help me to try and
program this radio up ?

Thanks for any help in advance.
Andy.

Many FR-50 and FL-50 were sold in DL under the Sommerkamp brand.

# 2935. DSPBlaster vs FT1000MP and alike

Newsgroup: rec.radio.amateur.equipment
Date: 2004-05-09 16:50:48 UTC
From: Thierry <"Use http">
Message-ID: <409e6166$1@news.vo.lu>
Source record: 21538

Hi,

Chance or not, I received in less than 3 days, 2 reviews of the DSPBlaster. In both cases the amateurs appreciate much this small application (no more supported nor sold) in condition of heavy QRM.

Has someone already tested and reviewed side by side performances of this DOS application "DSPBlaster" vs all the DSP available in a high-end RTX like an Yaesu FT100MP MarkV or alike ?

Some users of the DSPBlaster told me (at least for CW) that the product is far better than any DSP currently available in any RX. But none of them has ever work with high-end RTX (only a TS-50 or 570D) like an FT1000MP MarkV or even with a Ten-Tec Orion.

I 'd be curious to get figures or audio files on both devices in CW and SSB mode when both systems use all their filters to fight against RFI and noise...

PS. Has someone an information stating that the upgrade of the DSPBlaster routine was canceled due to a governmental action (NSA) that 'd have confiscated the source code of the application for its own activities in "trouble water"... ?

Thanks in advance

The values tell the uP on board what division ratios to use on the reference source to get to the channel spacing required. In the UK we use multiples of 6,25KHz, so with a 14.4MHz crystal you would need the $1201 value.

# 2940. Re: Mobile Power Fluctuations

Newsgroup: rec.radio.amateur.equipment
Date: 2004-05-09 22:36:35 UTC
From: Nitespark <nitespark@h8spam.cox.net>
Message-ID: <Mnync.54811$NZ4.29908@lakeread05>
Source record: 21542

What gauge wire are you using to connect to the battery?

Just because the cigarette lighter receptacle can handle 20 amps does not mean the plug connecting the radio can. I will say again. A cigarette lighter plug should not be used to power a radio drawing over 3-4 amps.

One other person who replied to your message suggested 10 gauge wire. I said 12. I guess he and I can "fight" over that over a nice cold brew sometime, but the bottom line is, we are both thinking along the same lines.

You will want to keep your power leads as short as possible. That doesn't mean you can't have 1-2 feet of extra lead, but if you are using 20 feet of power lead where 6 feet will do, then you are asking for trouble.

Assuming you have a good solid power lead connection directly to the battery, using heavy gauge wire, then I would check the antenna. You should use a good quality SWR meter or better yet, a good quality watt meter that you can use to check reflected power.

If the power output on your transmitter is showing 45 watts and there is little if any reflected power from the antenna, I would suspect the "meter" on your radio display may not be giving an accurate indication of actual power out.

Also, try hooking a 50 ohm dummy load (with the proper frequency and power ratings), to the radio and see if it does the same thing. If the radio display indicator looks "normal", then I would strongly suspect the antenna system.

Am-Com's "Clear Speech 2" is probably better in that it doesn't need a computer. Just plug it in to 12v power & your speaker and you have DSP. It is fantastic.

Dear All,

I bought a second-hand Tokyo Hy-Power HL-60U amplifier. It comes with no manuals. I would appreciate it if you could send me a copy the user manual and/or the service manual for it.

Thanks in advance.

Sam Yang

After reading the other replies here, here's another test you could
do: Connect your radio to a (10A)PSU that's connected to the mains.
See if that cures your problem. If not, disconnect the antenna and use
a dummy load.
If the radio still behaves the way it does now when fed from a PSU and
using a 50 ohm dummy load I would strongly suspect a radio problem.

I HIGHLY doubt it's even possible. UHF is so far from 11 meters in the radio spectrum that aside from scrounging parts, one cannot simply convert a UHF x-cvr to 11 m or vise-versa.

He's probably convinced that it's possible because he knows most CB sets
have UHF coax connectors.

It may interest some to know that the "UHF" coax connector does not mean
Ultra High Frequency. It actually comes from the US Military (and probably
NATO) designation: Universal High Frequency Coaxial Connector. In this sense
"Universal" means it is found on "practically all" military HF rigs.

References?

This sounds more like a retroactive acronym.

NATO didn't even exist when the UHF connector series
was first made.

The UHF connector was designed as a mate for RG-8 coax. It
was found on virtually all radios designed to drive RG-8
during that era. Typical examples of WWII vintage non HF
radios that used UHF connectors were the ARC-1 (120-150MHz),
SCR522(108-150MHz), BC-645 IFF (VHF/UHF) ... much later, the
UHF connector was used on the ARC-27(220-400MHz), URR-13/35(220-
400MHz), all two way base station radios in the 400-500MHz
bands...

I am inclined to go with the "they just didn't know any better"
explanation.

73,

Chuck Harris

Of course. Also, the BNC connector was originally devised for military applications during the war because existing connectors would rust badly under field conditions. The improved BNC was called that because the Base Never Corrodes.

The SMA connector is just too small to be able to carry any reasonable power level, which is why it got that designation. SMA stands for Stops MicroAmps.

I'd tell you what the designation on the N connector stands for, but it's obscene.

Which was along the lines of my post to this a few moons back. He may have
been referring to the UHF Citizen's band - which this conversion may have
then be possible from another UHF range. BUT to take it to 26-27 MHz, I
don't think so!

While I'm sure you thought your reply was cynically amusing, please be assured that you are quite alone in that thought. The "tea leaves" in question are those from the Industry Canada site. Whether that intention comes to pass or not is another matter.

No, your tea leaves comment suggested something terribly vague. It
implies that you are reading some vague indicator.

If your comment that it might change was based on seeing something
on the Industries Canada site, then it's not nearly that vague, and
it's not reading tea leaves. It's equivalent to reading your local
newspaper and seeing something definite.

You used the "tea leave" line, suggesting that you were indeed
getting some rumor or interpreting something you'd seen somewhere.
It was precisely that vagueness that got me to post, suggesting
that if it was "tea leaves" you were reading then you might be misled.
That led me to search for any concrete information, which got
me to the Industries Canada site. If you'd simply cut out the
"cuteness" and simply said you'd find something indicating it was
or that it might be coming to Canada on the Industry Canada website,
even including the URL, then it wouldn't look like you were misreading
something.

Couple things gang.

The original note was likely a Troll. It wasn't a serious request for information. I don't know the 3MOJ story but there's something odd going on, flame-war, troll baiting, etc.

The use of "UHF" might be a typo, where the intent was "HF".

The other possibility is the freebanders have a different terminology from standard radio talk.

VHF and UHF in freebander, bandit CB lingo isn't 100 mhz, 500 mhz, etc. VHF and UHF are band segments just above 27 mHz and below 30 mHz. .

# 2974. Help Voltage Check on Cushman CE-3 Monitor

Newsgroup: rec.radio.amateur.equipment
Date: 2004-05-11 03:30:36 UTC
From: nlsauvage@yahoo.com
Message-ID: <295c91c5.0405101930.742a3ae0@posting.google.com>
Source record: 21476

I recently bought a Cushman CE-3 Communications Monitor that had a
zapped fuse on one of the three power supplies behind the left hand
plug in. It had a leaky electrolytic that I replaced, and now
everything is OK with the fuse, but the unit is not working properly.
The three supply voltages measure +37.25,
+13.28, and the one with the fuse problem +0.50. If someone has a
service manual or a unit that they can check would you let me know if
those voltages are in the ballpark. I also, could use a
Service/Operations manual for the unit.
Thanks
Norb K7MRU

Instead of going straight to the battery, could I ground the negative
and hook the positive up to the accessory fuse in the fuse box? I
would like it if the unit turned on and off with the ignition. The
accessory fuse is 40A.

Well time has cought up to Ham Radio Amiga users -- the CUCUG Retires Amiga
Web Directory -
where SW was located has been retired -- maybe try google.

And the FTP site is broken sorry

# 2993. Re: Mobile Power Fluctuations

Newsgroup: rec.radio.amateur.equipment
Date: 2004-05-11 16:32:49 UTC
From: Nitespark <nitespark@h8spam.cox.net>
Message-ID: <Ge7oc.14$Md.7@lakeread05>
Source record: 21495

I would not recommend doing it that way. You should take BOTH positive
and negative leads directly to the battery, fuse BOTH leads with an
appropriate fuse. If you want to be able to control the radio power
through the ignition switch, get a heavy duty relay with contacts rated
15-20 amps, mount that inline with the positive lead and use your
ignition power source to energize the coil in the relay.

Dan wrote:
> Instead of going straight to the battery, could I ground the negative

# 2994. ICOM IC-M32 water leak in problem

Newsgroup: rec.radio.amateur.equipment
Date: 2004-05-11 16:54:21 UTC
From: cckeong_2000@yahoo.com
Message-ID: <ce54e3c2.0405110854.5c0e37db@posting.google.com>
Source record: 21496

I have borught a unit ICOM M32 brand new water proof Marine set,I only use for first time on my jetski the water was leak into the circuit board,the manufacture was not cover the warranty like this even it's a water proof set.
Any person have this problem before?
To change the IC board take 2-3 month mention by the ICOM Dealer.Damm it...

Chin

Does anyone know of a third party battery I can use in my AT-600??

## 2998. Looking for info on how a stroke-afflicted HAM might get back on the air

Newsgroup: rec.radio.amateur.equipment
Date: 2004-05-11 23:09:41 UTC
From: mdcalvert@aol.com
Message-ID: <7245c5d9.0405111509.5a4d921e@posting.google.com>
Source record: 21400

I recently stopped at a neighborhood house to ask the occupant a question about the "antenna farm" in his backyard. He has a tower with an array and three long wire antennas. I was hoping he might help me figure out how to use coax and a lightning arrestor to connect my old SW radios to a random length longwire antenna.

I had seen his antennas for years. He was a HAM when I was a kid in the 50's. I was in classes with one of his sons and had been invited to visit the house and watch his Dad work the radios. I was impressed by him and it probably help start me wondering about radio.

I knew he was now quite elderly, but I didn't know he had suffered a stroke. He had a little machine that allowed him to poke a couple of keys to "speak" to me with a stored message, ie, "I am using this machine to talk to you because I have had an illness."

He was obviously happy to have a visitor. I realized he was very frustrated by his impairments. He is unable to form his words clearly and might have trouble configuring the connection between thought and speech. He also has pretty serious tremors in his hands and had to use one hand to steady the other when he was punching the buttons on his communicator.

He took me out to his shack and showed me his station rig. He was able to explain how he fed the feedline from his wire antennae to the multiport antenna switch on his station desk. I noticed that he had a collection of CW keys sitting in front of the modern looking transceiver (Kenwood -- I think). I asked him him if he was able to work his radios by using the keys and he said, "No" and was clearly frustrated about not being able to make the back and forth motions required to use the bugs.

I asked him if he had ever tried to use a computer with a keyboard to work the radios and he (I think) seemed to not understand my question.

In another room, he had several PC's that he currently uses to scan and store photos that he took during his forty years plus as the senior photographer for the Oak Ridge National Labs (and all of the other "plants" here in Oak Ridge).
I asked him if he used the computers and keyboards to work with his photos and he nodded that he does.

Long Post to get to this point, but

Can someone in the Oak Ridge/East Tennessee area help me explore the possibility that this man can be helped to get back on the air? He said he tunes in and listens on the HAM bands and I could see it in

his eyes that he would like to be able to say hello and check in with his friends.

This guy is a stalwart in our community. He is know far and wide for his incredible photography and he has literally captured the history of Oak Ridge from the days when Pres. Roosevelt and Gen. Groves authorized the condemnation of farm lands in the Black Oak Ridge area in 1942. He has lost his wife and his two sons live far enough away that they don't visit him very often. I am NOT a HAM and I don't have any technical expertise -- I am simply hoping that one of you will know how to help him or you will know someone-- hopefully in this area -- who might be able to help him.

Thanks for reading. Please reply to me at:

# 3001. Wanted - Schematic/PCB Layout for IC-4AT

Newsgroup: rec.radio.amateur.equipment
Date: 2004-05-12 00:59:27 UTC
From: "Michael D. Harmon" <mharmon@att.net>
Message-ID: <40A176F6.733FE14C@att.net>
Source record: 21403

A fellow ham gave me 5 Icom U12 commercial radios, which I'd like to put on the 440 MHz ham band. Upon inspection, they are dead ringers for the old IC-4AT series of transceivers (even have silk-screened outlines for the three mini switches on the back). I need a schematic and PCB layout so I can move them down about 10 MHz.

Thanks,
Mike Harmon, WB0LDJ
mharmon@att.net

>I now have a 333 page service manual...that unfortunately is more oriented
>towards callibration than troubleshooting...but may lead to some useful
>information.

First thing I'd suggest checking on a scope of this vintage is the
power supply bypass capacitors. See if there's excessive AC ripple on
any of the DC supply lines - if so, one of the 'lytic capacitor cans
has probably dried out and gone high-Z. All sorts of interesting
symptoms can occur as a result.

Exact-replacement caps are likely to be impossible to find - you may
very well need to improvise, using a modern 'lytic of equal or greater
capacity and WVDC rating, and some creative wiring and mounting
arrangements to adapt the new cap(s) to the old pinouts.

Source record: 21406

I've had very good luck with this battery: HC-104(S)M-ADI600SM, made by W&W Manufacturing Co., and sold by various battery sellers. I generally pick mine up from a vendor at a hamfest. The ones I've bought have been 12 VDC @ 1500 mah NiMH, looking at the W&W website, it appears they are now offering a 2300 mah version, here's the link: http://wwassociates.com/cat1b.asp?pline_id=8&cat_mast_id=1

The ones I've used have been excellent, last all day long with the usual T/R duty cycle. Think I'll have to look for the new, more powerful ones at HamCom in Dallas next month!

I hope so. I'd suggest packet because it allows one to compose messages before actually getting on the air (much like email) and your friend is computer literate.

My late father had the same problem: he could think as clearly as ever but there was a disconnect between what he wanted to say and what came out. However, he could often get the right word eventually.

Good luck, K3DWW

As I remember there were two versions of the U-12, one did 450 to 460
MHz and the other did 460 - 470 MHz. To move them you will need to
change crystals at the very least.
I worked at Icom America for 11 years I never looked into what it
would take to move other than the crystals.
Though the same PLL board was used I don't remember the differences
off hand between the U-12 and 4AT, seem to remember they are not as
close as they look to be.

I've found that if I want U12 information, it's more productive to ask for
U12 information. Only reason I found this is cause I accidentally
clicked the wrong link.

It matters which U12 you have. If it's the highband version, you can
move it to 440 by switching the input wires on the pLL to flip it down
by 2X the IF frequency.

To make the Icom U12 work on Ham band.
Start with highband version of U12
Cut pin 15 of IC201 to reduce count by 1000. Too tight to lift pin or
cut trace.
Swap pins 7 and 8 of IC202 to reverse sense of offset.
This can be easily done with cut and strap on backside.

Example:
rxfreq txfreq txofst
21.8 osclow osclow osclow
rxfreq 444.1 444.1 449.1
oscfreq 422.3 444.1 449.1
vco 140.7666667 148.0333333 149.7
3xvco 422.3 444.1 449.1
x202 47.3 49.722 50.278
3x202 141.9 149.166 150.834
mixout 1.133333333 1.132666667 1.134
-cnt 272.0106254 271.8506192 272.1706317
use 272 count
x201 8.533 8.533 8.533
x201/2048 0.004166504 0.004166504 0.004166504
stepsize 0.012499512 0.012499512 0.012499512
cnts/mhz 80.00312512 80.00312512 80.00312512
div N/3 90.67020847 90.61687305 90.72354389
divisor 272.0106254 271.8506192 272.1706317

Board layout here:
http://nm7u.tripod.com/homepage/u12.jpg

If you have the lowband version...never mind.

I have the following items for sale. Prices do not include shipping. I will ship overseas.

Precision E-200-C Signal Generator.....$50 plus Shipping
This unit covers 90 kHz to 120 MHz. It has two separate adjustable RF outputs as well as internal modulation and adjustable AVC voltage. The tuning dial even has a smooth vernier movement. This is a clean working unit. It does not have probes or test leads. Includes a photocopy of the manual.
http://members.cox.net/radiostuff9/precision_siggen.jpg

Heathkit Transistor Radio.....$60 plus Shipping
Introduced in the fall of 1957. A kit radio from the early transistor days, this radio uses seven socketed metal-cased transistors (2N252, 2N253, 2N254, 2N185, 2N185, 2N238). It's powered by six flashlight batteries. The radio shows some wear but overall is in nice shape for it's age. It works intermittantly.
http://members.cox.net/radiostuff9/heathkit_xstrradio.jpg
http://members.cox.net/radiostuff9/heathkit_xstrradio2.jpg
http://members.cox.net/radiostuff9/heathkit_xstrradio3.jpg

Triplett 800 VOM with Manual.....$50 plus Shipping
Very clean working VOM. See the first picture for specs
http://members.cox.net/radiostuff9/tr.jpg
http://members.cox.net/radiostuff9/triplett_800.jpg

Eico 249 VTVM.....$20 plus shipping
Clean and working unit with a nice large easy to read meter. Meter has
a small crack on the lower left side and their is a scuff across the
meter face. No probes but has a connector so you can build your own.
Includes a photocopy of the manual
http://members.cox.net/radiostuff9/eico249.jpg

Westinghouse AC Voltmeter.....$35 plus shipping
This meter in a heavy bakelite measures 0-150 volts and the ranges are
changed by making the appropriate connections to the meter. The ranges
are: 1, 5, 15 and 150 volts. This is a working unit in nice condition.
http://members.cox.net/radiostuff9 west_meter2.jpg
http://members.cox.net/radiostuff9 west_meter.jpg

Precision Apparatus Series 85 VOM.....$20 plus shipping
Vintage well built VOM. Tested and working.
http://members.cox.net/radiostuff9/series852.jpg
http://members.cox.net/radiostuff9/series85.jpg

Brown Portable Potentiometer - Honeywell Artifact.....$35 plus
shipping
This was made by Minneapolis Honeywell in Philadelphia. Never knew they
were in Philadelphia so this must be pretty old! I would guess that this
is from the 1920's or 1930's. According to the instruction card, "this
instrument is for checking potentiometers and thermocouples. It can also
be used for checking millivoltmeters and other sources of electromotive
force within its range. The range of this instrument is 0-71 millivolts
DC." The instrument itself appears to be in excellent condition. The
instruction card does have a water stain and and leather handle is
coming apart.
http://members.cox.net/radiostuff9/honeywell_artifact.jpg

http://members.cox.net/radiostuff9/honeywell_artifact2.jpg
http://members.cox.net/radiostuff9/honeywell_artifact3.jpg

VHF Probe Detector - RF Labs Boonton, NJ.....$30 plus shipping
This is a piece of vintage test equipment, a VHF Probe Detector made by Radio Frequency Labs of Boonton, NJ. According to the enclosed data sheets, this was made in 1950. This unit covers 70-150 MHz. Includes the meter, all attachments and the wooden case. The original factory calibration sheets filled out by hand and dated November 1950 are still in the case. All appear to be in very good condition.
http://members.cox.net/radiostuff9/vhf_detector1.jpg
http://members.cox.net/radiostuff9/vhf_detector2.jpg
http://members.cox.net/radiostuff9/vhf_detector3.jpg
http://members.cox.net/radiostuff9/vhf_detector4.jpg
http://members.cox.net/radiostuff9/vhf_detector5.jpg
http://members.cox.net/radiostuff9/vhf_detector6.jpg

McMurdo Silver Model 900 VOMAX VTVM with RF probe...$20 plus shipping
This is from the 1940's and an interesting piece if you collect McMurdo Silver equipment. Includes a copy of the manual. This unit is untested.
http://members.cox.net/radiostuff9/silver_vomax.jpg

Thanks for looking.

# 3021. 455 kHz CW filter for ICOM

Newsgroup: rec.radio.amateur.equipment
Date: 2004-05-14 16:27:27 UTC
From: Jon K Hellan <hellan@acm.org>
Message-ID: <87brkr7z4g.fsf@acm.org>
Source record: 21422
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew

Hi,

I have an ICOM 707 transceiver which uses 455 kHz filters (FL-52A and FL-53A). I would like to add a CW filter, but ICOM's filters are pretty expensive. I wonder if I could use a 455 kHz filter for a different radio instead. Some mechanical adapation will be necessary, but will they be electrically compatible?

I've found the following link: http://www.qrpproject.de/UK/inradfilt.htm. Here, an alternative filter is suggested for both YAESU FT817 and ICOM IC703. The ICOM uses the same filters as mine, so this would suggest that filters for the YAESU might work in ICOM.

Regards

Jon Kï¿½re - LA4RT

## 3022. Programming the TAIT 2030II?

Message-ID: <bYlpc.64$44.34@newsfe1-win>
Source record: 21429

Bill, the following should help.

Front panel view of 8 pin chassis mic connector.

Indent located at 12o'clock position, working anti-clockwise.

Pin 1=Mic input
Pin 2=+8v @10mA dc output
Pin 3=Freq up/down (Ground direct for up, or via 470 ohm)
Pin 4=Squelch switch (open=low,closed=high)
Pin 5=PTT
Pin 6=Gnd (PTT)
Pin 7=Gnd (Mic ground)
Pin 8=AF output (Middle pin)

Icom warning, do not short Pin2 to gnd. Damage to 8v regulator will occur.

Taken from Icom manual
good luck, Roger G7JAQ

PS, for MIKE read MIC

Your injection frequency for the LSB mode probably isn't set correctly. You didn't say how your audio sounded. If it is lacking low frequency response, the injection frequency is too far down on the filter slope. This would also account for the lower output power.
I am not familiar with the innards of this rig.....it is possible that this could be corrected through a softkey menu. I am sure that this rig probably has a service menu mode.

Hi

Does anyone know where I can get a look at the Heathkit SB220 Manuals? I
would like to see the schematics on this unit especially interested in the
transformer's primary and secondary hook ups.
Any one know a link where I can find the service manual or operators manual?
Thanks
Bob

Will trade Drake TR-4 with speaker/power supply and MN-4 matching network (with VSWR and 300 watt forward power meter) for a Yaseu FT 817. The TR-4 is a complete system in that all components match. Also included: 12 volt power supply and three spare 6BJ6A tubes. Depending upon age AND available accessories for the 817 I might throw in a Kenwood TM 261. For additional details call 803-649-1184 day or 803-649-1183 night. David Vine WA1EAW. Other items for possible deal include Kyocera Smartphone (SprintPCS) for mobile Internet access and/or Palm Symbol (Palm Pilot with built-in Barcode reader. See all at eham.com

I was able to spend just a short time at Dayton; however, in terms of equipment the only real news I noticed was Yaesu's introduction of the FTDX-9000 to compete with Icom's IC-7800. The '9000 will apparently come in 150W and 400W 'flavors' with list prices in the $11,000-$13,000 (US) range. Icom had several '7800s on display complete with a plasma screen simulcasting the '7800's display. I didn't notice much else in terms of new gear. I also hadn't planned any major purchases so I didn't check any rig prices. My big find was 12-packs of 2500 mAh AA cells for $20!

# 3063. Re: Problems with LSB on IC706MKII

Newsgroup: rec.radio.amateur.equipment
Date: 2004-05-17 03:47:49 UTC
From: fmmck@aol.com
Message-ID: <20040516234749.05832.00001319@mb-m03.aol.com>
Source record: 21364

<< I am using icom 706 MKII
on LSB, I get bad reports about
audio and modulation quality, and the output power is too low.
but on USB the output power is normal with good audio quality
and modulation! >>

Chafik-

Did you compare USB and LSB on the same frequency or on different bands? If not on the same frequency, there could be other factors involved.

The IC-706 MKII may have USB and LSB mixing frequencies determined by the microprocessor, so there would normally be no adjustment. About the only thing you could do would be to try resetting the CPU, as someone else suggested. If you do, all of your programmed frequencies will be deleted.

If the assumption about the CPU determining the mixing frequency is true, there isn't much that can go wrong unless you happen to have a bad filter, or somehow a CW filter is being selected when set to LSB.

<< My KW TM-732 generates an RF carrier, but does not mix audio all of a sudden. I have proved it to be the radio and not the mic. >>

PD-

I had a very frustrating problem like yours with a Kenwood TS-660. With service manual in hand, I tried making voltage and oscilloscope measurements, but nothing seemed to be out of order. Not being able to track it down, I set the radio aside for several years.

Recently I came across it and decided to give it another try. This time I found that the microphone really was bad. It had an intermittent connection, and just happened to work when I had tried it on another rig.

Thank you very much, I found the files on a mirror site to the Bama site. It was able to work for me and I was able to print it out and spent all day yesterday cleaning this old linear and following the instructions to its operations (that is my next problem). Seems the Ampere meter didn't move. I was only able to power it with 120v and I just couldn't get it to work for me. I do not believe that the unit has worked or been used in 20 years. I was driving it with about 100 watts but it just wouldn't do anything for me. The tubes lit up, the fan doesn't seem to move, I oiled that and tried to get that to move, but I do not think that will do it. I think it needs a new fan, possibly new tubes. We will take it one step at a time.
Thanks for all the help.

# 3068. PCI FM Receiver?

Newsgroup: rec.radio.amateur.equipment
Date: 2004-05-17 13:51:13 UTC
From: ben mitch <nnnewsgroup@bbbenmitch.nnnet>
Message-ID: <c8ag09$lod$1@hermes.shef.ac.uk>
Source record: 21369

hi,

i have been looking for an FM receiver that will pick up an audio transmission between 170-180MHz and pipe it into the input of my machine's soundcard. at the moment, i am looking at the ICOM PCR1000, but i am really quite averse to investing that much money in this little experiment.

it struck me - perhaps there is a PCI slot card available that will act as an FM receiver? does anybody know of such a thing? i think you get FM receivers packaged with TV-in cards, but i don't suppose they will support the waveband i'm looking at.

also, does anyone have any comment on alternative avenues i might follow? i have considered building my own receiver, but the time investment would probably not make the saving worthwhile (the PCR1000 is about ï¿½350), but if anyone could suggest a receiver module that would likely do what i'm after with minimal further design work, i'd like to hear about it.

thanks for your time,

ben mitch

Hello,

I'm interested in acquiring the CW narrow filter YF-112c for my FT-840.

So, I would appreciate hearing some testimonials on this item before buying it!

Any comments? Will it yield better CW copying? "Must have" or isn't worth?

To be honest, I've never gone to Dayton, so I'm speaking more
generally. I've found that when you take a successful homegrown
event like this and try to 'improve' it, oftentimes the charm
is reduced. Pacificon has apparently grown to nearly-national
level stature, and moving from the Bay Area would likely make
it something else entirely.

Just a thought too :-)

I have a similar problem on USB. My receive audio dropped to barely audible, and it sounded like people are talking from within a tin can. Got a friend on air, we compared AM, FM, CW USB and LSB, and I listened to RTTY. Everything received well except USB; LSB was a little off, I think. Transmit was fine (5-8, 5-9). Wrote ICOM, they had 'no ideas for troubleshooting.' Sent it back Friday (5/14) as it's still under warranty.

Will let'cha know what ICOM says!

I am trying to get a two'fer and wondering if it's possible. I need to get a VHF marine radio for boating use on Lake Erie, for weather reports and so on. It would be nice to be able to listen to shortwave, etc. in a single, waterproof package. I was wondering if it is possible to modify a Yaesu vx-7r or 5r to reliably transmit on marine frequencies in emergency situations.

Thanks

John

Not legally, and probably not well.

For safety equipment, a bit unwise to cut corners.

Many ham radios which include 2M will receive the VHF marine
frequencies (the weather channels are part of this) just fine, so you
would only need to monitor one unit for everything if you set up the
scanning correctly. You could then turn on a VHF marine radio when you
need to xmit.

Happy trails,
Gary (net.yogi.bear)

>Could anyone help me?

The power output on High is set by R71. This pot is located on the main circuit board and is the right hand one of a pair of pots at the rear center to the right of the biggest shield enclosure. The left hand pot of the pair is R72 and sets the Low power level. The main board is under the top cover. I have no idea what the range of adjustment is for either. Bear in mind that some solid state RF amplifiers don't like to work very far from their design power level. Excess heating and spurious emissions can result

The service manual says to adjust the High power first, then the Low power.

Thanks Dave.

I've had a look and spoken to their UK supplier - unfortunately, it appears that they come with so much functionality that I end up paying much more than I want, again (upwards of ï¿½400).

All I need is an FM-receiver that will tune to around 170-180MHz and chuck out the audio, so I was hoping to find a unit around the ï¿½50 mark. Maybe I'm being optimistic, but this is only a factor of 2 away from what the ï¿½10 transistor radio on the windowsill does.

Any other suggestions much appreciated.

Mitch

Good idea to spend the money on the marine radio.
They are expensive because the are built for marine use and specs.

How about putting the radio inside the boat and route the audio
to an external weatherproof speaker (amplified ?).

You can receive noaa weather radio on most 2m radios.

joyce

## 3108. Wanted: manual/schematic for Tempo VHF-One

Newsgroup: rec.radio.amateur.equipment
Date: 2004-05-18 15:56:24 UTC
From: k5dh@raytheon.com
Message-ID: <Imqqc.2$T33.1@dfw-service2.ext.ray.com>
Source record: 21307
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment

I'm looking for the owner's manual, service manual,
and schematic for an old Tempo VHF-One 2m FM xcvr.
Yes, I'm aware of the many online vendors who sell
manuals. I only paid $10 for the radio... I don't
want to pay $16 to $25 for each manual! I'm hoping
that one of my fellow hams might have the manuals I
need and would be willing to help me out. That's
what hams used to do... help each other out.

This is one of the early production models of the Small Wonder Labs DSW-II-20, 20m CW tranceiver, unassembled and never unpacked, but with the all mod packs to bring it up to current models. Also included is Jackson Press DSWK IC that enhances the keyer and some other things, see http://jacksonharbor.home.att.net/dswk.htm.

Price $145 shipped in CONUS. Please respond off the list(wrmoore47 (~at~) comcast.net). I hate to loose this, but other projects need the money for now!

73,
KS4L

if only i had the skills... thanks anyway.

i have discovered "scanners", handheld toys around the ï¿½100 mark that
will do the waveband we're looking at, so we will probably go with that.

thanks for all help, appreciated.

It's not clear what you mean by "clean sweep forward". What kind of a watt meter? I better think more and possibly do some measuring on mine, but wouldn't there be no change in power. If the MKIIG has a peak reading circuit - probably does - then it'll be highly dependent upon the modulation waveform aka your voice.

I have the following items for sale. Prices do not include shipping. I will ship overseas.

Precision E-200-C Signal Generator.....$50 plus Shipping
This unit covers 90 kHz to 120 MHz. It has two separate adjustable RF outputs as well as internal modulation and adjustable AVC voltage. The tuning dial even has a smooth vernier movement. This is a clean working unit. It does not have probes or test leads. Includes a photocopy of the manual.
http://members.cox.net/radiostuff9/precision_siggen.jpg

National Type ACN Dial.....$40 plus Shipping
http://members.cox.net/radiostuff9/nat_acn_dial.jpg
http://members.cox.net/radiostuff9/nat_acn_dial2.jpg

B&W Type TVL Coil Base .....$10 plus Shipping
This is for the TVL series of plug-in coils. This is just thing if you are building a 1940's style transmitter.
http://members.cox.net/radiostuff9/BW_TVL_Base.jpg

Heathkit Transistor Radio.....$60 plus Shipping
Introduced in the fall of 1957. A kit radio from the early transistor days, this radio uses seven socketed metal-cased transistors (2N252, 2N253, 2N254, 2N185, 2N185, 2N238). It's powered by six flashlight batteries. The radio shows some wear but overall is in nice shape for it's age. It works intermittently.

Eico 249 VTVM.....$20 plus shipping
Clean and working unit with a nice large easy to read meter. Meter has a small crack on the lower left side and their is a scuff across the meter face. No probes but has a connector so you can build your own. Includes a photocopy of the manual
http://members.cox.net/radiostuff9/eico249.jpg

Westinghouse AC Voltmeter.....$35 plus shipping
This meter in a heavy bakelite measures 0-150 volts and the ranges are changed by making the appropriate connections to the meter. The ranges are: 1, 5, 15 and 150 volts. This is a working unit in nice condition.
http://members.cox.net/radiostuff9 west_meter2.jpg
http://members.cox.net/radiostuff9 west_meter.jpg

Precision Apparatus Series 85 VOM.....$20 plus shipping
Vintage well built VOM. Tested and working.
http://members.cox.net/radiostuff9/series852.jpg
http://members.cox.net/radiostuff9/series85.jpg

Brown Portable Potentiometer - Honeywell Artifact.....$35 plus shipping
This was made by Minneapolis Honeywell in Philadelphia. Never knew they were in Philadelphia so this must be pretty old! I would guess that this is from the 1920's or 1930's. According to the instruction card, "this instrument is for checking potentiometers and thermocouples. It can also be used for checking millivoltmeters and other sources of electromotive force within its range. The range of this instrument is 0-71 millivolts DC." The instrument itself appears to be in excellent condition. The instruction card does have a water stain and and leather handle is coming apart.

VHF Probe Detector - RF Labs Boonton, NJ.....$30 plus shipping
This is a piece of vintage test equipment, a VHF Probe Detector made by Radio Frequency Labs of Boonton, NJ. According to the enclosed data sheets, this was made in 1950. This unit covers 70-150 MHz. Includes the meter, all attachments and the wooden case. The original factory calibration sheets filled out by hand and dated November 1950 are still in the case. All appear to be in very good condition.

Brand new, used once to set up mobile antennas. The RF-1 is a portable pocket-size RF measuring instrument which simplifies adjustment of antennas by measuring antenna SWR and impedance. It can also measure transmission line parameters such as loss, impedance and electrical length as well as capacitance and inductance. Original box, instruction sheet. $100.00 shipped Conus.

I have an Oregon Scientific temp/time device that synchronizes to WWVB (which I am sure sends its date and time data in UTC), but permits setting the Time Zone only to the 4 US mainland ones.

Any way of getting this thing to display UTC without disabling the auto-synch feature?

Unless ADI has changed their plastic moldings, this thing is a real POS;
color doesn't match the ADI AT-600, is a sloppy match to the outline of
the radio's case nor does it fit correctly...a poor accessory to a real
nice handheld.

| Good idea to spend the money on the marine radio.
| They are expensive because the are built for marine use and specs.

The local thrift shop had one (mobile unit, not HT) for $6 ... I almost bought it for tinkering, but decided I had enough projects. No idea if it works, of course :)

I guess if it's really needed I could buy it and ship it to somebody who pays for that :) Still can't guarantee that it works though ...

| How about putting the radio inside the boat and route the audio
| to an external weatherproof speaker (amplified ?).
|
| You can receive noaa weather radio on most 2m radios.

Is that really true? Certainly, some can, but of the four 2m radios I've owned, only one can receive the 162 mhz frequencies. (Another can read 150-159 mhz, and the other two can only do 140 to 144 mhz.) Perhaps I should just get more modern equipment. :)

Hi guys,

From your vast collective knowledge, please could you recommend a video transmitter with the following characteristics:

* very low power consumption (<70mA), ideally running at below 7.4volts

* small size

* transmits mono audio and colour video

* transmits outside the spectrum used by WiFi (802.11b/g uses 2401-2483 MHz). In practice I guess this means the video tx must use either 800Mhz, 1400Mhz, 2300Mhz or 5800Mhz. It must be legal for use in the UK. What I'm after is a video TX that uses a "quiet" part of the spectrum. 2.4GHz certainly aint quiet (wifi, digital cordless phones, microwaves, AV transmission)!

* available in the UK

* costs less than 150 UK pounds

* comes with a compatible RX which also has very low power consumption.

Many thanks for your help,
Jack

PS
Sorry for sending to so many newsgroups. I've spent bloody ages trying to find a solution but with no luck yet so I'm eager to get as much advice as possible.

They are called feedthru capacitors. Typical value might be 1000 pF.

Not sure where you can buy them anymore.

Could it be a feed through capacitor? This is a short from one side of the wall to the other, but it has some capacitance to ground. The purpose it to pass DC but shunt high frequencies to ground. Very useful for passing DC power supply voltages through a chassis wall. A picture and price are here:

Hello Group,

I am looking for an operations manual or quick explanation of the operation
of a Yaesu Ft76 or 26 ( 2 meter version).

Any help or leads would be appreciated.
73,

Russ W8RHJ

# 3141. Re: Low power video transmitter

Use the 2.4Ghz video system from Radio Shack. Wi-Fi is a spread spectrum signal and will not interfere with the video. The Radio Shack system won't cause a problem with the Wi-Fi.

>> 17 mm of coax. RF doesn't like to go thru little holes.
>
>OK, coax it is. Can I use coax without the outer poly jacket? It would make
>it much easer to solder in that small space if it were not there.

It can be used without the outer insulation, as long as you make sure
that the braid doesn't accidentally touch anything which isn't
supposed to be part of the RF ground.

In fact, if you're using coax to create a feed-through into a
shielded, grounded subenclosure (e.g. one made out of scrap PCB
material soldered to the main board's ground plane) then it would
probably be a very good idea to remove the outer insulation, feed the
coax through a hole in the enclosure wall which is just _barely_ big
enough, solder the ends into place, ground both ends of the braid, and
then also solder the braid to the subenclosure wall where it passes
through.

A more standardized way of creating such RF feedthroughs is to mount
an SMA connector on the subenclosure wall - solder minicoax to one
side of it (often the inside), and use a flexible or mini-hardline
coax with an SMA plug to connect to the other side.

# 3145. Schematic for Ratelco S1303A

Newsgroup: rec.radio.amateur.equipment
Date: 2004-05-21 00:17:20 UTC
From: wb4mleAT@surfbestDOT.net
Message-ID: <uhiqa09evs01438kn7u1okqcjdc8j39la1@4ax.com>
Source record: 21346

I have a Ratelco S1303A 40 amp bench supply that I believe has a few
wires swapped between the front panel and the control board plug.
Current limiting (variable) doesn't work. Schematic/plug to front
panel diagram badly needed. Any help appreciated!!

>
>So make a male-female connection?

Right. Mount a female SMA jack on/through the wall (solder it, for
best shielding and grounding), connect coax to its rear connector
inside the subenclosure, and use a male SMA on the cable which
connects to it on the outside.

> I'm trying to preserve as much of the
>signal as possible. This will lose a few dB, won't it?

Great Ghu, I should certainly hope not! Unless you create a really
severe impedance mismatch when you connect the coax, almost all of the
power will get through without being either reflected or absorbed.
You shouldn't lose more than a very small fraction of 1 dB if you do
it right.

This sort of hookup approach appears widely throughout the excellent
"Experimental Methods in RF Design" book by W7ZOI/KK7B/W7PUA,
available through the ARRL. In this book it's quite common to see
modules such as local oscillators and bandpass filters being
constructed inside sealed enclosures, with the power going in via the
capacitive feedthroughs someone else mentioned, and signals going in
and out on SMA connectors (or BNC if you've got the space and want to
save a few bucks).

You'll also see this approach used in commercial microwave gear.

# 3167. Help request-- Kenwood TH22AT wont Xmit on certain freq

Newsgroup: rec.radio.amateur.equipment
Date: 2004-05-22 18:40:55 UTC
From: surfbored <jtkirk@starfleet.mil>
Message-ID: <X8Nrc.95018$536.16579808@attbi_s03>
Source record: 21269

I have modified my TH22AT to increase the Xmit range according to the instructions here: http://www.frn.net/tech/mods/qrz/th22at.txt

but it still won't Xmit on freqs above 151.995. I can recieve but not Xmit.

Are there further mods I have to make?

Please reply by posting-- thanks!

# 3168. Yaesu FT767GX bits required ?

Newsgroup: rec.radio.amateur.equipment
Date: 2004-05-22 20:31:35 UTC
From: Smog <james@burrill.co.uk>
Message-ID: <c8odam$d6q$1@news7.svr.pol.co.uk>
Source record: 21270

Hello all.
I have just taken receipt of a Yaesu FT-767GX and there are a few bits I need for it and wondered if anyone can help me with these:
One of the rubber grip covers on the small rotary knobs is missing ?
The rubber grip band around the main rotary channel selector is snapped ?
The 4x rubber feet on the base of the unit are missing ?
The 4x rubber feet (??) on the left hand side of the unit are missing ?
The 3x flaps that cover the holes, where the additional band units fit, are missing ?

Any information at all will be greatly received

Answer is Yes! There are many rigs where the MARS mod only takes it
to the 151.995 limit. I've had a few in the past, TH22A was one of
them.

Go to: http://www.mods.dk/view.php?ArticleId=434

Be prepared to do a bit more than just cutting a jumper wire.

Is the radio aligned properly? It's easy to check but if it's out of
alignment, it needs to go to a radio shop to be fixed since proper
calibration tools are needed.

To hear if it's aligned right:
- In AM mode, tune to a time station, such as CHU or WWV.
- Now listen to the station in both LSB and USB modes. Is the sound of the
clock tick the same, or close? If so the rig is aligned properly. If they
don't sound the same, the rig is out of alignment.

Minor problem with the alignment scenario. There is NO ALIGNMENT for the
carrier oscillators. They come from a DDS chip controlled by the uPC.

Thanks for your help gentleman. I may have found the right one.
I know he/she was looking for a talking manual. The problem is i belong to
way too many groups and i didn't have the information at the time.

I have the following items for sale. Prices do not include shipping. I will ship overseas.

Precision E-200-C Signal Generator.....$50 plus Shipping
This unit covers 90 kHz to 120 MHz. It has two separate adjustable RF outputs as well as internal modulation and adjustable AVC voltage. The tuning dial even has a smooth vernier movement. This is a clean working unit. It does not have probes or test leads. Includes a photocopy of the manual.
http://members.cox.net/radiostuff9/precision_siggen.jpg

Heathkit HD-1416 Code Practice Oscillator....$15 plus Shipping
This unit works and runs off of a 9 volt battery (not included). Hook your telegraph key to this unit and practice your code!
http://members.cox.net/radiostuff9/heathcpo.jpg

Calrad Japanese 70 MM Vernier Dial-NIB.....$20 plus Shipping
This vernier is new in the box and is the 70 mm version. The back side mates to a standard 1/4 inch shaft.
http://members.cox.net/radiostuff9/vernier.jpg

National Type ACN Dial.....$35 plus Shipping
http://members.cox.net/radiostuff9/nat_acn_dial.jpg
http://members.cox.net/radiostuff9/nat_acn_dial2.jpg

B&W Type TVL Coil Base .....$10 plus Shipping
This is for the TVL series of plug-in coils. This is just thing if you are building a 1940's style transmitter.
http://members.cox.net/radiostuff9/BW_TVL_Base.jpg

Heathkit Transistor Radio.....$50 plus Shipping
Introduced in the fall of 1957. A kit radio from the early transistor days, this radio uses seven socketed metal-cased transistors (2N252, 2N253, 2N254, 2N185, 2N185, 2N238). It's powered by six flashlight batteries. The radio shows some wear but overall is in nice shape for it's age. It works intermittently.
http://members.cox.net/radiostuff9/heathkit_xstrradio.jpg
http://members.cox.net/radiostuff9/heathkit_xstrradio2.jpg
http://members.cox.net/radiostuff9/heathkit_xstrradio3.jpg

Triplett 800 VOM with Manual.....$50 plus Shipping
http://members.cox.net/radiostuff9/triplett_800.jpg
http://members.cox.net/radiostuff9/triplett_8002.jpg
http://members.cox.net/radiostuff9/triplett_8002.jpg

Western Union Legless Telegraph Key.....$35 plus Shipping
http://members.cox.net/radiostuff9/wu_key.jpg

J.H. Bunnell Brass Telegraph Key.....$35 plus Shipping
This mounted to a metal base and it appears to have come from the
factory this way or else someone did a very professional riveting job.
http://members.cox.net/radiostuff9/bunnellkey2.jpg
http://members.cox.net/radiostuff9/bunnellkey.jpg

Lionel J-36 Bug Telegraph Key - W.W.II.....$125 plus Shipping
J-36 Bug telegraph made by Lionel - the famous train company. Lionel
stopped making trains during W.W.II and made telegraph keys and other
instruments for the war effort. The key is in excellent shape for it's
age. As is typical of these bugs, it only has part of the Lionel emblem.
It is unusual
to find one of these keys with the complete plastic emblem. The Lionel
nameplate was made out of a celluloid-type plastic, and the vast
majority of Lionel J-36 bugs lack a nameplate.
http://members.cox.net/radiostuff9/lionel_bug.jpg
http://members.cox.net/radiostuff9/lionel_bug2.jpg
http://members.cox.net/radiostuff9/lionel_bug3.jpg

LS-166/U Dynamic Loudspeaker for PRC-47 Radio Set.....$40 plus
Shipping
http://members.cox.net/radiostuff9/prc47spkr.jpg
http://members.cox.net/radiostuff9/prc47spkr2.jpg

Electrovoice Model 623 Microphone - New in box.....$125
plus shipping
This is a Hi-Z dynamic mike with instructions and cable.
http://members.cox.net/radiostuff9/ev623_mike2.jpg
http://members.cox.net/radiostuff9/ev623_mike.jpg
http://members.cox.net/radiostuff9/ev623_mike3.jpg
http://members.cox.net/radiostuff9/ev623_mike4.jpg

Eico 249 VTVM.....$20 plus shipping
Clean and working unit with a nice large easy to read meter. Meter has
a small crack on the lower left side and their is a scuff across the
meter face. No probes but has a connector so you can build your own.
Includes a photocopy of the manual
http://members.cox.net/radiostuff9/eico249.jpg

Westinghouse AC Voltmeter.....$35 plus shipping
This meter in a heavy bakelite measures 0-150 volts and the ranges are
changed by making the appropriate connections to the meter. The ranges
are: 1, 5, 15 and 150 volts. This is a working unit in nice condition.
http://members.cox.net/radiostuff9/west_meter2.jpg
http://members.cox.net/radiostuff9/west_meter.jpg

McMurdo Silver Model 900 VOMAX VTVM with RF probe...$20 plus shipping
This is from the 1940's and an interesting piece if you collect McMurdo
Silver equipment. Includes a copy of the manual. This unit is untested.
http://members.cox.net/radiostuff9/silver_vomax.jpg

Thanks for looking.

I can't tell you THAT particular unit is OK, but I have an R2200 and an R2400. The one you are looking at DOES NOT have the spectrum analyzer function which is a nice feature. Also, no mention was made of the oscillator, whether it is standard or high stability.

I notice the seller doesn't have much "history"....that may be OK, may not. I have seen several recent service monitor auctions on Ebay that were highly suspicious to me. I didn't bid on them, but they looked very suspicious.

# 3197. Re: Does any one know test equpiment?

Its "tripping" Mike ? Ive studied the schematics and its a little beyond me, normally |I can suss most faults out but this one is a right pig. I have totally disconnected the PSU from the rest of the radio and on switch on it will just sit there and produce 13.5 and 24v but you put a load on the 24v output and it seems to trip and you have to disconnect the mains and leave it for a while or discharge the caps until it will work again. In the rig, with it all wired correctly, you wind up the power and again it trips and you have to leave it to "reset" ???
Can anyone shed any light ?
If anyone wishes me to send them a file of the PSU schematic then please let me know.
Thanks.

I'm looking for a lapel speaker - not a speaker/mic - with a belt
clip. Looks like a speaker/mic except that it has only one 1/8"
mono plug at the end of the cable.

Radio Shack used to have one but it has been discontinued.

Reply to my call sign at arrl dot net.

Personally, I prefer IFR or HP to the Motorola Service monitors.
However, I've used Motorola's and there's nothing wrong with them in
general (who knows about that specific unit). For the posted price at the
time I read it ($611) it would probably be a great deal, if the unit
works properly.

In that case, I apologize. But it is not unknown for sellers (ebay and other) to post questions about the item in order to make others aware of them.

Alan AB2OS

On 05/25/04 08:48 pm Q put fingers to keyboard and launched the following message into cyberspace:

If you don't find one I have a Motorola MT-1000 spk/mic with no cord. I used the cord/connector for a packet/programming cable. The mic and speaker worked great but the cable had nicks in it so it was the perfect thing. I left slack on the leads coming out. Make offer.

# 3219. Electroplated ham badge : it is arrived !

Newsgroup: rec.radio.amateur.equipment
Date: 2004-05-26 15:15:49 UTC
From: Thierry <"Answer direct via http">
Message-ID: <40b4b4a6$1@news.vo.lu>

Hi,

Promized thing, due thing (or something like that, sorry)

There are some years the US company Westid sold an electroplated badge for radio amateurs showing your callsign. The owner being silent key, the business stopped with him.
See my first review at http://www.eham.net/reviews/detail/2668

During some months I searched for a new manufacturer able to make the same product with the same quality, features and options for the lower cost as possible and without no participation from myself.

After discussion, the company MAXSELL friendly accepted to resume the business.
That was not easy because we had to find a way to reproduce the original design showing a hamshack or to find back the original "master dye".
Hopefully MAXSELL investigated and an agreement was found with the previous designer.

So, to all of you who contacted me last year and this year about this badge, and how to get the new one, I can now tell you that the badge is available again on electroplated support, gold or silver, text in blue, black or red with any custom comment.
See at http://www.maxsell.com/radio_badge.htm

For all non-US readers, and specially for European hams, add about $18 for the shipment and insurance.

At my knowledge this is the only company that provides such a product for the ham community.

Ideal for RAYNET use:

http://www.maxsell.com/radio_badge.htm

"Model # M105
The badge recesses into the leather. Money and credit cards can be stored
and retrieved without displaying the badge. Our most popular law enforcement
model."

Hi Ed,
I contacted the lady selling the Motorola unit. She told me it works perfect.
Her husband was a retired military electronic warfare specialist and he recently passed away so now she is just selling off all the equipment in their shop. Anyway, I am in Tampa, Fl and she is in a small town called Hudson about 30 miles north of here so I am going to take a drive to look at it. Hopefully she has some more goodies to sell.

Thanks ED for responding to my question.
Dan

Looking for a great deal on one or two a narrow band, UHF (450-470) walkie(s) with a key pad and LCD readout.

Types I've seen that fit the bill are certain Motorola P1225's ..CP200's & Kenwood TK-380's. There's a bunch of others that would do the job as well.

I'm ready to buy ..please email if you have something. Thanks, Ray

# 3228. TECH: Shack Master

Newsgroup: rec.radio.amateur.equipment
Date: 2004-05-26 20:27:58 UTC
From: Jimmy Mac <no-spam@manicarcade.com>
Message-ID: <i57tc.13348$Fo4.186933@typhoon.sonic.net>
Source record: 21230

Hello all!

I'm trying to diagnose an issue on an old ACC Shack Master SM100.

Overall the device is working fairly well but the secondary transmitter stage in the SM will not activate for the COS. I've tried other radios and all have the same symptom. Cross band repeat does not activate from Primary RX to Secondary TX. I can force the issue with the COS bypass codes as if I were accessing the SM from the telephone but even after swapping radios, and confirming the High/low state in the controller programming, this feature just will not activate without the *.

Any tips would be greatly appreciated!

TIA!

Jim..

Source record: 21231

Another odd development, when I transfer control to secondary from the primary, a signal to the primary is sent to the secondary! but it;s the secondary that no longer links to the primary for TX.

So.. Primary in control, SRX to PTX but PRX does not STX.

Secondary in control, PRX will STX but SRX will not PTX

If I use the key to manually TX using * on either, it will TX until I hit #. So bypassing the COS on either side will make it work manually.

ODD

BWAH-hah-hah-HAH! ROFL!

I've known a couple of "cop wannabees"--and they tend to be
pretty weird people. Why in the world does a HAM need a
steenkin' BADGE? Doesn't the world have enough potbellied
old men flashing badges without adding hams to the ranks?

# 3242. Adjust output power of IC718 ?

Newsgroup: rec.radio.amateur.equipment
Date: 2004-05-27 16:11:08 UTC
From: Tallion <http>
Message-ID: <40b61329$0$19650$626a14ce@news.free.fr>
Source record: 21243

Hi All !

I have a ICOM IC 718 #08 and i obtain only 100 watts max when i adjust R1707
(80 watts on 20 M)while some obtain 200 watts, why ?
and how i do for to obtain about 150 watts ?

Thanks !
John FBCZ
(f5bcz@free.fr)

Source record: 21244

The IC-718 is rated at 100 Watts -- see URL:
http://www.qsl.net/sm7vhs/radio/icom/ic718/specs.htm

I would be very careful of adjusting it above the manufacurers specs. (;-(

I have known folks who did this on other rigs and eventually blew out the
finals (:-(

Being there is 6dB per S-unit -- increasing power from 100 to 150 Watts
(less than 2 dB) will not be noticeable on the receiving end.

Your frazzled finals may vary (:-)

Standard C468A 95% $100
Includes 1 CWC150A Wall wart

PacComm Sprint-2 TNC Like new,
With AD-4 Analog-to-Digital board
With cable for Kenwood TM451A $100 obo

Icom 02AT with BC-35, stock battery and wall wart.
And extra Ice brick battery $ 75

Maha MH-C777 Universal Charger-Conditioner LNIB $ 30

Dynamic Communications
Model A470-25 $ 20
Sold as is, no manual.

Model 10-0 $ 20
Sold as is, no manual.

Carver Audio Amp 95+%
Model M-2120
With Manual. $ 75

All items will include manuals, and any docs that I Have.

I have a lot of older computer parts/MOBS-CPUs/boards
ect. Everything from Rll,MFM to SCSII controllers.
contact me for what you are looking for.
I have an External Scsii CdRom changer that uses Pioneer
carts.

I also have a lot of C64's 3 good 3-5 fixable or parts.
Much peripherals - drives,printer,parallel/serial ports,
modems, tape drive, graphics pads, joysticks, ect.
AND a lot of cartridges, and software - games to productivity.
Included is all manuals, plus extra books for programming ect.
Included is software to run a bbs from the C64..
I would like to sell it all as one group. Will cost more,
if sold piecemeal....

$150 takes it all on the C64 equipment.

Shipping is NOT included

From: Dustin <fordman@btc-bci.com>
Message-ID: <xRqtc.168$1p.44311@news.uswest.net>
Source record: 21149

Hello, I have a HTX-212 with a PLL ERR code. I cant get the radio to do anything because of the error, just wondering if anyone knows of a solution for this error? The manual says you need to do a hard reset and if the code returns it needs to be sent in for service. I have done the reset and the code returns right away. The mode is a Radio Shack, Realistic... Thanks
Please email me at kc8zem@dskellogg.com if you have any answers for me.
Thanks

Looking for comments to see which is the better radio??? The original 746 or the TS-2000??? Anyone have experience with both of these radios??? I know the TS-2000 has UHF and the Icom 746 doesnt - other than UHF - how does the quality of these radios compare?????? Which has the more desireable receiver??? or is one better than the other on VHF 2 meter SSB??? or FM???

Thanks

Tom

I've never used or owned a 746, but I do have a TS2000 which is a good
radio for doing everything. If you're on a limited budget and want to
do HF, VHF, UHF including 1.2 Ghz (optional), AM, FM, SSB, CW, Sat,
RTTY, Packet, ect ect the TS2000 is your radio and all for about $1500
+/-.

Yes it's a hell of a rig considering all it can do.

Some Mods are made by folks that don't know what they are doing.
Sadly they find their way onto the web.
Likewise with forums.
Most mod pages have a Caveat about this --- So mod-er beware

Example from a popular mod page

"Before you do anything, please read this.! The modifications are not
verified and tested by us, so if you try some of the articles on your own
equipment, it's on your own risk. Performing modifications of some equipment
may be a violation of local laws. If you have any doubts, do not perform the
modification."

If you need a bigger signal, get a linear amplifier or a better
antenna.

The 718 can probably be adjusted to do more than 100 watts, but at 150
or 200 watts, no one will hear an increased loudness. The main effect
may be a distorted signal, taking up too much bandwidth.

Estate sales are generally pretty safe bets, especially since you can go there to look at the equipment. Make sure to ask if there is an operator's manual with it. Good luck.

I know its not what you asked for, but I must comment that my IC 746Pro beats both of those units, IMHO. The IF DSP and noise reductions system allow reception of signals that would be un-intelligible on those other two rigs.

What is "idle" voltage? I don't think I've heard that term before. You have certain min-max voltages for your tune voltage, depending on the K/V characteristic of the VCO. Are you talking about V_Tune_Center?

Phil, If you don't find one still let me know off list. putting a straight cable on here is about a 15-30 min job and I have the stuff. I had already thought of wiring it up like a cell phone headset so it can work through one of the many RS PTT/VOX adaptors that were closed out for $2.00. You may have seen them. They are the ones with the Icom plug that as a bare item costs $9.00 or more from parts stores.

K4RJJ Ronny

3 Rules (2 taken from Steve Martin)
1 Lord loves a workin man
2 See a doctor and get rid of it
3 check Radio Shack for ridiculous closeouts on parts. Buy em all and let the hamfest sort em out.

Phil, Looks like the UK has one. I found this in a one second Goggle
search. There must be more although that's not bad.

# 3266. FS: Old Radio Related Books

Newsgroup: rec.radio.amateur.equipment
Date: 2004-05-28 14:59:41 UTC
From: oldbooks78@aol.com
Message-ID: <20040528105941.13391.00000064@mb-m04.aol.com>
Source record: 21168

I currently have the following old radio-related books for sale. Postage (Media Mail within the US, at cost elsewhere) is $2.50 for the first book, and $1 for each additional item. The books are:

Worldwide Publications "White's Radio Log, Vol. I, Number I" Worldwide Publications, c1982. The 136 page softbound book is in good+ condition, clean with no page tears or pen marks. Not dated, but looks to be from the early 1980's. A directory of North American AM, FM, and TV stations including world-wide shortwave stations. Available for $3.

American Radio Relay League "The A.R.R.L. Antenna Book" American Radio Relay League, 1960. Nineth edition. The 320+ page softbound book is in good condition. The covers show some wear from previous use, there are a few bent page tips, and there is a previous owners address label inside the front cover. A good solid reading copy of this informative text on radio antenna technology. Available for $4.

Woodruff, H. Charles "Short-Wave Listener's Guide" Howard Sams & Co., Radio Shack, 1976. Sixth edition. The 136 page softbound book is in very good condition, clean with no page tearts or pen marks, and a strong binding. A collective list of worldwide shortwave radio stations listed alphabetically, by area, by frequency, and more. Available for $4.

Siegel, Hy "All About CB Two-Way Radio" Radio Shack, 1976, Soft Cover. The 112 page softbound book is in very good condition, clean with no page tears or pen marks. Nicely illustrated. Available for $3.

Frost, J..M. (Editor) "World Radio TV Handbook, The Authorative Directory of International Radio and Television (Volume 39, 1985)" Billboard Publications, 1985. The 600 page softbound book is in very good condition, clean with no page tears or pen marks except for a previous owners name and date at the top of the Table of Contents. Available for $3.

Federal Telephone and Radio Corporation "Reference Data for Radio Engineers, 2nd edition" Federal Telephone and Radio Corporation, 1946, Second edition. The 322+ page hardbound book is in about very good condition, clean with no page tears or pen marks except for a previous owners name stamp inside the covers. Green cloth covers. A nice early radio reference text. Available for $7.

Glasgow, R.S. "Principles of Radio Engineering" McGraw-Hill, 1936, First edition, eighth printing. The 520 page hardbound book is in very good condition, clean with no page tears or pen marks except for a previous owners name inside the front cover, and a few light pencil marks/notes in the text. Available for $8.

Nilson, Arthur R. and J.L. Hornung "Practical Radio Communication; Principles, Systems, Equipment, Operations" McGraw-Hill, 1943, Second edition. The 927 page

hardbound book is in very good condition, clean with no page tears or pen marks except for a preperty stamp inside the front and rear covers. A nice early radio text. Available for $8.

Everitt, William Littell "Communication Engineering" McGraw-Hill, 1937. The 727 page hardbound book is in about very good condition. Clean with no page tears or pen marks except for a previous owners name and address inside the front cover, and a few passages underlined in pencil. A nice early text on the science of the radio. Available for $8.

Institute of Radio Engineers "1933 Report of the Standards Committee of The Institute of Radio Engineers" Institute of Radio Engineers, 1933. The 225 page softbound book is in good+ condition, clean with no page tears or pen marks except for a previous owners name on the front cover. Some wear to the spine paper, but not too bad. Page tips in rear lower corner bent outwards somewhat. A neat look at standards development for the radio in the early 1930's. Available for $8.

Federal Telephone and Radio Corporation "Reference Data for Radio Engineers, 1st edition" Federal Telephone and Radio Corporation, 1943, First edition, second printing. The 200 page hardbound book is in good+ condition, clean with no page tears or pen marks except for a previous owners name inside the front cover. The pages are a bit wavey along the bottom edge, possibly from minor moisture exposure. Otherwise very nice. Green cloth covers over flexible boards. A nice early radio reference text. Available for $10.

Morecroft, John H. "Elements of Radio Communication" John Wiley & Sons, 1929. The 269 page hardbound book is in good+ condition. There is a previous owners name inside the front and rear covers, and light pencil marks/notes on many of the pages. Dust jacket has extensive tape reinforcement along the edges. A nice early text on the radio. Available for $10.

Smith, F. Langford "The Radiotron Designer's Handbook, 3rd Edition" The Wireless Press, 1941. The 352 page hardbound book is in about very good condition, clean with no page tears or pen marks except for a previous owners name and address inside the front cover. A nice vintage look at radio design. Available for $10.

Saveskie, Peter N. "Radio Propagation Handbook" New York, NY, U.S.A.: T A B Books, 1980, 1st Edition. Red boards. The 499 page hardbound book is in very good condition. There are address labels from the previous owner inside the front and rear covers, and an embossed property stamp on the title page, otherwise very nice. ISBN: 083069949X Available for $15.

Or, all of the above for $80 post paid (within the US). If interested in any of the above, please email to "Oldbooks78@aol.com" to reserve. Thanks.

Dave

# 3267. FS or trade IC 718

Newsgroup: rec.radio.amateur.equipment
Date: 2004-05-28 19:15:35 UTC
From: nightowls627@aol.comnojunk
Message-ID: <20040528151535.02657.00000087@mb-m28.aol.com>

<< There is NO ALIGNMENT for the
carrier oscillators. They come from a DDS chip controlled by the uPC. >>

Cliff-

I've lately had a problem with my old IC-706, after a hot day in the car. With the IF shift set to the mid-range detent, there is a very noticeable difference in the sound of received noise when switching between upper and lower sideband. Could that be due to a bad SSB filter? Could that be the same problem Chafik is having?

73, Fred, K4DII

# 3269. WTB UHF 450-470 Walkie w/DTMF

Newsgroup: rec.radio.amateur.equipment
Date: 2004-05-29 02:55:02 UTC
From: netrunner <netrunner@cox.net>
Message-ID: <eYStc.1423$CW.579@lakeread05>
Source record: 21171

Looking for a great deal on one or two a narrow band, UHF (450-470) walkie(s) with a key pad and LCD readout.

Types I've seen that fit the bill are certain Motorola P1225's ..CP200's & Kenwood TK-380's. There's a bunch of others that would do the job as well.

I'm ready to buy ..please email if you have something. Thanks, Ray

Just those crappy LCD things.
That is a market that is waiting for an entrepreneur to make money in.
AC line voltage, LED or fluorescent display, with battery backup and a
reference output. Similar to the old Heathkit most accurate clock, but with
the 60 khz receiver!
I'd buy one right away!!

Hay,

since a few days I have the problem, that my Kenwood TM742E does not
switch on any more.

The backlight came up, but the display does not show any thing.

Then I put out the backup batterie, and now the display is totaly dark.
Only the the RC button lightning.

Did someone has the same problem?

Remember: To get free shipping, first close any browser with a window to the Sharper Image website. Has to do with cookies I think...

Under the search box there is a "Catalog Quick Order" button. Then Search for Item ET255YYY for a large display Date-Time-Seconds that works on the WWVB Co signal. It is a Radio Controlled Atomic Alarm Clock running on 2 AA batteries.

Not bad for 9.95 shipped. IMHO.

Here is a link to see what it looks like:
http://www.sharperimage.com/us/en/catalog/pipmoreshell1_2.jhtml?sku=ET255YYY&pid=37134400

"This slim, lightweight and ultra-precise radio-controlled alarm clock sets itself automatically to the U.S. Atomic Clock's WWVB radio signal from the National Institute of Standards and Technology in Fort Collins, Colorado. Displays time with running seconds and date in large, easy-to-read numbers on an LCD screen. Automatically accounts for Daylight Saving Time. With one touch, you can instantly display the correct time in any of the four continental U.S. time zones.

Clock is automatically set by radio once daily; or press the "wave" button to begin an active search for the WWVB signal. Outside the continental U.S., the quartz clock can be set manually. Press anywhere on the front panel to illuminate the LCD screen. Runs on 2 AA batteries (included). Measures 3 1/2" x 2 1/2" x 5" and weighs 7 oz. 90-day warranty. "

# 3294. Recomended mid-range shortwave set-up

Newsgroup: rec.radio.amateur.equipment
Date: 2004-05-31 05:58:35 UTC
From: Steve <abc@123.com>
Message-ID: <fQzuc.76675$gQ6.4150@newssvr25.news.prodigy.com>
Source record: 21197
Cross-posted to: rec.radio.amateur,rec.radio.amateur.antenna,rec.radio.amateur.equipment

Hi,

I have wanted to get involved with shortwave for years and would like to get some recommendations on a mid-range ($200-400) receiver and antenna set-up. I plan on telescoping mast for shortwave, TV (mostly for uhf PBS stuff), and FM. The height restriction in our town is 50' but I imagine anything around 30' would produce good results since there are no big hills or trees nearby. In addition I own a newer 2.8 GHz PC running Windows XP for any recommendations on how I might incorporate this into the overall set-up.

Being inexperienced I am thinking I should start with simply listening with a capable mid-range receiver and then after some years time buy into a transmitter as well. This is all untutored preliminary thinking on my part and would welcome anyone's ideas as to how a beginner could best get started on the road to mid-to-high end shortwave/ham listening/broadcasting. I see this initial step as phase one of a two or three part program that will extend over a period of five or ten years.

Thank you for your help.

Steve

Note: I will be buying "Passport to World Band Radio" as a way of educating myself on some of the issues I mentioned

# 3295. FT-726 receive very poor

Newsgroup: rec.radio.amateur.equipment
Date: 2004-05-31 12:46:32 UTC
From: lynnm@iname.com
Message-ID: <2a788cc7.0405310446.7958ce4@posting.google.com>
Source record: 21196

can anyone assist...

i picked up a FT-726R, untested and with no warrenty recently and it has 144 and 50mhx modules ....

my questions are ..

1, the receive on 144 is very poor, i can only just hear the local repeater, i have tested with my handheld and i can receive at 59 plus when transmitting next to the radio but the gain is very bad ... any ideas.. i did see in a earlier posting that maybe the BF981 might need replacing ... an i correct or can anyone help.

2, the 50mhz module has no cables .. Grrr :-(, can these be made up, do the have to be shielded?

3, I disconected the 144 and wired up the 50mhz module in it's place and i got a E on the display ... can the 50mhz module be run on it's own ?

appreciate any help with this, and any more that i find on the way to repairing this radio.

thanks for reading

Mike

For around $400 you can get a used Icom IC-R75 and if you're thinking of being a ham look at the IC-718, pretty much same Rx except no coverage above 30MHz. Yaesu FRG-7 is a decent analog Rx.

Look on the bright side, you don't seem to have the misfits like Gareth in the US. Looking a bit odd, even wearing "FBI look alike" badge doesn't come close to threats to children on the scale of evil.

Do you have many amateurs of many years standing who bad mouth others when they used to squeak on repeaters themselves?

YNX

For about $400, you can buy any of the following on the used market
(ebay) without working too hard at it.

ICOM R70a
ICOM R71A
Icom R75 (cutting it close, but you can probably find one for less than
400)
JRC NRD525 (again, cutting it close, but on SSB it's the best of this
bunch). The best ergonomics by a mile. Needs an external speaker, dont
bother with the JRC ones, just use anything available, it will at least
equal the 525's matching speaker. This thing was almost 1200 bucks new.

Yaesu Frg7700 I would put this a notch below any of the above.
Yaesu Frg8800 This one too.

BDK

You don't say where you want to transmit, or whether you're licensed
to transmit there, or whether a modded unit would be type acceptable,
so it's impossible to recommend anything. That's not a flame -- just
an observation.

Hi All,

New to the newsgrouops, but not to the radio hobby. I'd like to buy a Collins R-389 LF receiver in complete and decent shape to complete my listening shack. I can but it outright, but also have a few choice items I'd consider for trade or partial trade, one way or the other. I'd consider trading my TMC CV-591A Single Side-Band converter, or Collins 180S-1 Antenna Tuner in consideration towards a R-389.

Thanks, Dan

Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap,alt.ham-radio.marketplace,rec.radio.amateur.equipment

I have the following items for sale. Prices do not include shipping. I
will ship overseas.

Hallicrafters SX-99 Receiver and R-46B.............$500 plus shipping
This radio is in very nice condition. It has no extra holes or
modifications and has all of the correct knobs. Has all of the original
Hallicrafters tubes and several of the original paper tags It plays very
well on all bands and has good audio. The cabinet has no dents or
gouges, just some minor scuffs. The speaker is also in very good shape.
It has some small scuffs and scratches but no dents. Includes a
photocopy of the manual.

Lafayette HE-10 (KT-200) Receiver .....$400 plus Shipping
A pristine and collectible Lafayette HE-10 receiver. This is the same as
the Lafayette KT-200 receiver. This is also the same receiver as the
Trio 9R4J. Trio became Kenwood. The styling of this radio is similar to
the Hallicrafters S-38 but this radio is far superior to the S-38. This
is a 9 tube, AM/CW receiver that covers 550 kHz to 31 MHz. It has an
S-Meter, AVC, ANL, hinged cover. This radio is in excellent condition
inside and out. Their
is one small blemish on the top left towards the front of the cabinet.
This can be seen in the photo. The receiver plays well. Also included is
a photocopy of the manual.

Dentron 160-10AT Transmatch.............$125 plus shipping
he 160-10 AT, when properly adjusted, will tune
out load resistance and transform the load impedance to 50-70 ohms. The

160-10 AT
also includes a highly efficient balun, so antennas fed with open wire line may be
properly tuned to desired frequency. The 160-10 AT may also be used with coax fed
antennas as well as end fed single wire types, balanced and unbalanced feed lines.
The 160-10AT comes with an SO-239 input connector, with outputs of an SO-239
coax connector, single wire, or balanced lines. This tuner works great and looks like
new on the inside. There has never been any arcing in this tuner.

Heathkit HM-2140 Peak Reading Wattmeter....$125 plus shipping
Heathkit HM-2140 Peak Reading Wattmeter. This unit will read power in two scales: 0-200 watts and 0-2000 watts. Frequency range is 1.8 to 30 MHz. The unit runs on a 9 volt battery and the remote sensor can be left in the cabinet or mounted several feet from the unit. This is a working unit in excellent condition. Includes a photocopy of the manual.
http://members.cox.net/radiostuff9/heathhm2140.jpg
http://members.cox.net/radiostuff9/heathhm21402.jpg
http://members.cox.net/radiostuff9/heathhm21403.jpg

Precision E-200-C Signal Generator.....$40 plus Shipping
This unit covers 90 kHz to 120 MHz. It has two separate adjustable RF outputs as well as internal modulation and adjustable AVC voltage. The tuning dial even has a smooth vernier movement. This is a clean working unit. It does not have probes or test leads. Includes a photocopy of the manual.
http://members.cox.net/radiostuff9/precision_siggen.jpg

Vintage Fairchild "Nixie Tube" Multimeter.....$40 plus shipping
This is a Fairchild model 7050. This is a voltmeter and an ohmmeter that measures up to 1.5 kV and 15 megohms on the resistance scale. This is a nice working unit and accuracy looks good.
http://members.cox.net/radiostuff9/fairchild_nixie_meter.jpg

Daiwa CN-620B SWR Bridge and Wattmeter.....$80 plus shipping
Daiwa CN-620B Twin Needle SWR Bridge and Power Meter. This is a very clean, working unit that will cover 1.8 to 150 MHz and measure power in three ranges: 0-20 watts, 0-200 watts and 0-2000 watts. I place this meter in in line and compared it to my Bird Wattmeter and it is very close in readings.
http://members.cox.net/radiostuff9/daiwa620.jpg
http://members.cox.net/radiostuff9/daiwa6202.jpg

Heathkit HD-1416 Code Practice Oscillator....$15 plus Shipping
This unit works and runs off of a 9 volt battery (not included). Hook your telegraph key to this unit and practice your code!
http://members.cox.net/radiostuff9/heathcpo.jpg

B&W Type TVL Coil Base .....$10 plus Shipping
This is for the TVL series of plug-in coils. This is just thing if you are building a 1940's style transmitter.
http://members.cox.net/radiostuff9/BW_TVL_Base.jpg

Heathkit Transistor Radio.....$50 plus Shipping
Introduced in the fall of 1957. A kit radio from the early transistor days, this radio uses seven socketed metal-cased transistors (2N252, 2N253, 2N254, 2N185, 2N185, 2N238). It's powered by six flashlight batteries. The radio shows some wear but overall is in nice shape for it's age. It works intermittantly.

hi,

buy the most expensive one you can find, make sure it has lots of
surface mount parts so you can end up with a junk radio after you mod
it.

All kidding aside, just find a nice used motorola for the service you
like
to use (already tuned and setup or easy to do at radio shop)
and then modifiy it for the ham band(s) you like.

Now you've got a radio that is spec to the service you need,
why put you life on the line with a mod radio when you can have the
real thing ?

mindy

An Unbuilt Heathkit HD-1250 Solid State Dip Meter.....$225 plus
Shipping
This unit covers 1.6 to 250 MHz with 7 coils and runs off of a 9 volt
battery. Everything is there and still in the original packing. The only
issue and this is a problem with all of these units is that the black
foam in the case has disintegrated. The new owner will need to clean
this off with a solvent. The coils will be removed and placed in a
separate bag. I have had several of these units and they all have had
this problem no matter what part of the country they have come from.

I tried to sell only the Icom before, but now, I think I am going out of my mind! I am going fully cw qrp so I have to sell what I have. All of this for 475.00 plus shipping.

Icom 718 w/ut-106 dsp (manual, schematics, etc.)
ldg z-100 autotuner (no Icom interface but that is used only if you want to push the tune button on the 718. Works independently.)
Buxxcomm rascal glx for digital modes
Radio Shack 25 watt 13.8 switching power supply.

I will sell only as a package deal or will trade for perfect condition elecraft k1.
All of this is less than a year old. The auto tuner I have had for two weeks and bought it new from Giga parts.

Please, only serious inquiries only.

Message-ID: <vabvc.1080$F2.395@bignews6.bellsouth.net>
Source record: 21125

Just returned from factory servicing. Four finals replaced and bias resistors balanced. I got 500 watts out for about 20 watts in. Just to make sure you know it- MAXIMUM input on this amp is about 25 watts. Most folks try to pour the coal to it at 100 watts, and that will fry the transistors everytime, so make sure you back your drive down before turning the amp on.... the amp is rated for 500 watts out, so whatever drive it takes to accomplish that, stop right there! On 10M and 12M, the highest you may see will be 450 watts. No band switching. Filter kit available or MFJ LP filter also available.
Great little light amp with single muffin fan (really quiet.)

$575.00 Shipped

# 3329. LSB problems with IC706MKII

Newsgroup: rec.radio.amateur.equipment
Date: 2004-06-02 14:32:28 UTC
From: chafik.philo@eudoramail.com
Message-ID: <cacbc942.0406020632.196e8ca4@posting.google.com>
Source record: 21130
Cross-posted to:
rec.radio.amateur.equipment,alt.ham-radio.hf,rec.radio.swap,rec.radio.amateur.homebrew,rec.radio.amateur.misc

Hello
I still have the problem with my IC-706MKII in LSB mode:
On all bands,I hardly get half output power on LSB, while on the
contrary ,
I get all available output power on USB.
About the modulation: the lower frequencies of my
voice are cut off, which produces bad modulation.
On recieve:
On LSB,the signal level is not as strong as on USB,
and some frequency components of the audio are
cut off;
the same symptoms appear when recieving Brodcast stations
(AM) on LSB.
Fortunatly,I can fix this annoying problem by rotating the IF shift
knob counterclockwise(about +800 or 1000HZ), so the the recieved
signal's level geos better
along with the audio quality.
So 1- I am looking for a way to fix this problem while transmitting.
I dont know if the LSB's BFO is off frequency, or
that the FI4 filter (which select the wanted SSB) is not realy
centered on 9.011.5 MHZ.
IF the first assumption is true , is there any way to change the
BFO frequency while
transmitting on LSB?
Yes, there is a menu in setup configuration (Q4) where one can
shift
carrier frequency (BFO) by +- 200Hz. But this is not enough.
2-
The Service Manual states the following:

**********
IF SHIFT CIRCUIT:
==========
" The IF shift circuit shifts the center frequency of IF signals to
electronically shift the center frequency.
The IF shift circuit shifts the 1st LO and BFO within ï¿½1.2 kHz
in SSB/CW/RTTY modes or ï¿½250 Hz in CW-N/RTTY-N
modes. As a result, the 2nd IF (also 1st IF) is shifted from
the center frequency of the 2nd IF filter (FI4, FI5 or
optional IF filters). This means 2nd IF signals do not pass
through the center of the 2nd IF filter. Therefore, the higher
or lower frequency components of the IF are cut out. Since
the BFO frequency is also shifted the same value as the 1st

IF, frequency is corrected at the detector.
In the IC-706MKII, the 1st LO frequency is shifted to change the 2nd IF because a fixed 2nd LO frequency (60 MHz) is used. The 1st IF filter (FI1) and crystal filter (FI3) have 15 kHz pass-band widths, and do not affect IF shift operation.
.............

BALANCED MODULATOR:
==========
Microphone signals from the AF selector switch (IC23) are applied to the balanced modulator (IC17, pin 6). The BFO signal from the PLL unit is applied to IC17 (pin 8) as a carrier signal.
IC17 is a double balanced mixer IC and outputs a double side band (DSB) signal with ï¿½40 dB of carrier suppression. R191 and R193 adjust the balanced level of IC1041 for maximum carrier suppression. The resulting signal passes through a 9 MHz IF filter (FI4 in SSB/CW/RTTY modes) to suppress unwanted side-band signals.
..............

3-3-3 2ND LO AND REFERENCE OSCILLATOR CIRCUITS:
==========
The reference oscillator (X1, Q14) generates a 30.0 MHz frequency used for the 1st LO and BFO circuits as a system clock and for the 2nd LO signal.
.....................

3-3-4 BFO CIRCUIT:
==========
The DDS IC (IC12) generates a 10-bit digital signal. The signal is converted into an analog wave signal at the D/A converter (R116ï¿½R135). The analog wave is passed through the high-pass filter and low-pass filter. The 9 MHz BFO signal is then applied to the MAIN board via the "BFO" signal line

I think the first is true - the LSB BFO is off-frequency. If the filter
was not really centered on 9011.5 then USB would have problems too.

I think you have a broken crystal. (I don't have a 706 so I can't tell
you *which* crystal) I don't think any alignment problem can cause it
to be that far off-frequency.

Once again.

The 706 DOES NOT have BFO or CARRIER oscillator xtals. The carrier
oscillator signal is generated by a DDS chip with it's frequency controlled
by the micro-processor referenced to the 60 MHz oscillator. There is NO
adjustment for the carrier oscillator frequency.

Try a reset of the radio and see if it helps.w9wi@earthlink.net

I would think his AM carrier power setting is too high. If I turn my 850 up to 100W AM carrier and modulate it "swings" backwards. If I turn the carrier power down to 10W it modulates up to around the 75W mark. My audio is injected into the balanced modulator directly. The only way to AM.

Yup, I've used mine without any trouble, actually the power meter is
pretty close to being right. There are adjustment pots inside that
you can tweak to make it "100%" if you have access to a known good
meter to compare it to.

Don't expect to get much mileage outta the modulation meter :).

Howard.

I have tried bama, but I also have a schematic coming. What I do have is a

dead U2 SL-952 wideband amp. If anyone has one for sale I would buy it.

Steve

# 3338. Question for Field Day - extended ops battery pack

Newsgroup: rec.radio.amateur.equipment
Date: 2004-06-02 23:49:38 UTC
From: johnbartley@email.com
Message-ID: <f90c7f43.0406021549.2eb9952d@posting.google.com>
Source record: 21140

I'd like to have a 12v battery pack, using throwaway batteries, for extended field ops with my Yaesu VX-5R HT. I want to be able to operate without having a genny on hand, and throway cells of a standardized type allow me to say to Logistics "Uh, go gimme a raft of them thar D cells", simplifying my life in the process.

Anyone done this with either four pairs of D cells or a pair of 6v lantern batteries?

IIRC, IEC-type D-cells are normally designed to deliver 200mA, whereas the lantern batteries are designed to deliver 300 mA. Is that correct?

Many thanks for your helpful and on-topic advice.

Going with 12 volts is probably a waste of money and weight, in this
particular application. My recollection is that the VX-5 only needs
about 8 volts to reach full transmit power (but needs around 9 - 9.5 in
order to be able to charge its internal lithium battery). If you
power it from 12 volts I believe it simply regulates the voltage down
to what it really needs, and this is probably going to result in extra
heat buildup.

You might try 3 pairs of D cells, for around 9 volts nominal - 25%
less weight and I believe you'll probably get good power out. Drop
your transmit power to 1 watt, stick on a spaghetti-noodle antenna
instead of the stock base-loaded rubber duck, and you'll probably at
least triple your battery run-time with no loss of transmit range (and
distinctly-improved receive sensitivity as well). Use a roll-up
J-pole hung up in a tree for even better power conservation.

In a real pinch, use the Yaesu 3-AA-cell battery pack, load it with
alkalines, and you'll still be able to get out 100 milliwatts or so...
enough for some short-range ops.

>IIRC, IEC-type D-cells are normally designed to deliver 200mA, whereas
>the lantern batteries are designed to deliver 300 mA. Is that correct?

If I recall correctly, this sort of current level is probably what
they're rated for, in terms of mAh. They can deliver a good deal more
current than this, but at the cost of decreased total energy delivery
capability.

Check out the manufacturer's websites, such as www.duracell.com -- go to the professional pages for the data sheets, such as this one:

http://www.duracell.com/oem/primary/alkaline/mn1300.asp

That shows an alkaline D cell under a 750mA load lasting almost 12 hours, with a terminal voltage of just under 1 volt.

You have to do a LOT of talking at high power to use up that kind of power!

I have a 6-D cell pack I (can) use, but most of the time I stick with the AA pack for the radio. In a pinch, I keep a set of AA Lithium cells around -- much longer shelf life, and longer life under high drain.

Spend some time perusing the data sheets; you'll learn a lot.

Hello to the list,

Anyone out here got a relay for the T4XC Drake transmitter? It is marked
with the name Varley. 120V coil and 15,000 ohm resistance. Mine is open, and
I need one badly.
Thanks to all es 73

What I would do first is a filter calibration. It's possible this will
fix your problem if you are lucky.
#1 You will need to enter the adjustment set mode. To do so, turn off
the radio.
Stick a dummy 3.5 mm "same size as headphone jack" plug into the
remote jack in the rear of the radio. "center pin is connected to
ground". Then, push the two left buttons, "p.amp/att" and "tuner/call"
in at the same time. While these two buttons are pressed at the same
time, turn on the power switch. The radio should crank up in the "set"
mode. Then, push F3 "TX" to enter the transmit set mode. Push up/down,
or maybe also the tuning or memory knob, to scroll through the
settings until you get to filter calibration. The display should show,
"GO FILTER CAL" when you get to the right one.
Have the radio connected to a dummy load, or matched antenna.
Push and hold menu "GO" to start the calibration. The radio will
transmit for a few seconds while it is calibrating the filters. It's
all automatic. This *should* cure your lopsided filter/carrier
oscillator problem. BTW, I don't know if it has any effect, but I
would re-center the IF shift to neutral before doing this adjustment.
When done, push F1 to exit the setup menu. It may turn the radio off,
but I forgot...If not, turn the radio off, take out the dummy plug,
and turn the radio back on normally. If you are lucky, it will be

fixed. I've done this on mine when I noticed the filters were getting a little lopsided. When the filter setup is correct, you should be able to listen to "white" band noise, switching between USB, or LSB, and notice no real change in pitch. "IF shift nuetral".
These radios do automatically what we used to have to do manually as part of the alignment. Do a search, and d/l the complete 706mk2g service manual for complete instructions on this, and all the other setup's...I wouldn't mess with any other than the filter setup. If it ain't broke in other areas, don't fix it...:/ MK

# 3351. HELP: Icom PS-125 switching PSU is hissing.

Newsgroup: rec.radio.amateur.equipment
Date: 2004-06-03 03:55:56 UTC
From: Bob <nowhere@nospam.org>
Message-ID: <tjxvc.27385$Hn.954593@news20.bellglobal.com>
Source record: 21053

Okay, perhaps I'm being a bit picky, but here's the scoop:

I find a lot of switchers are audibly noisy. That is, they emit a 'hiss' noise from their circuitry. Some units are barely audible, others are distractingly loud. (yes, I know some people can't hear 'em at all, but my wife and I certainly can, which is why there are a few toggle switches inserted on the ac lead of a couple of our 'not often used' appliances.)

I just bought a new PS-125 to go with my IC-756ProII, and the PSU works well, but wow it hisses like a leaky bicycle tire! (The DC is pure and clean, I'm referring to the audible hissing emanating from within the case.)

Is there a common offending component, such as a loose coil form or winding into which I may drizzle a wee bit of krazy glue? Or did I get unlucky with one particular unit and everyone else here has a nice quiet PSU that silently sits there (until of course the internal fan fires up, but that's quite tolerable.)

So, fixable (as in 'they all do that'), or exchange the darn thing (as in 'most of them are very quiet') ??

If anyone could share some experience here on this one, I'd be most grateful.

Thanks!
Bob.

Good advice - except I didn't have access to anything which could
download and read a PDF, as I only has my Palm Tungsten W with me to
search, read and post.

I found it interesting that with loads somewhat similar to what I
expect for Field Day, the e2 Titanium batteries had about 20% longer
run tinmes, all other things being equal.

# 3357. IC-756PRO II or FT-1000MP MK V ?

Newsgroup: rec.radio.amateur.equipment
Date: 2004-06-03 18:12:15 UTC
From: rseifertweb@earthlink.net
Message-ID: <75639161.0406031012.503888e3@posting.google.com>
Source record: 21059

I searched for various spellings groupings of these characters ... mainly all old posts referring to the IC-756PRO, but no comparison to the PRO II, and all posts came about around the time of release of both radios. Unfortunately, there's no real good poop on either now that you've all had time to really play with them both very much. Thoughts about going one way or the other? 200W on the Yaesu is nice, but, I've got several Icom's I'm rather happy with. I'm interested in all your thoughts...

Also, any rumors about new replacements to this class of xcvrs? I'm not talking about the presumably unaffordable IC-7800 series. Thanks kindly!

From: "K. Hastings" <myfamilydotcom@hotmail.com>
Message-ID: <hMQvc.53137$Np3.2333440@ursa-nb00s0.nbnet.nb.ca>
Source record: 21062

I'm a newbie that recently picked up a well-used Alinco ALR-206T at a local swap meet. I've cleaned it up and repaired worn out DTMF keypad and now seems to be working normally.

I was hoping that more experienced hams might give me some history & comments about this rig - you know - when it was generally sold, typical problems, etc.

The Alinco website does not make the service manual available - guess it's too old for that.

Thanks in advance,

Kevin

hello everyone:

Could anyone tell me the selling value of these items. I need
to get a heavy duty 3 or 4 wheel
mobility scooter and need to sell these items or trade them
for the scooter.

The items i have are:
,
1. Yaesu FT-902DM HF transceiver with a FTV- 901 transverter
( 2 meter module only ).

2. Kenwood TS-790 Triband ( 144, 430,1.2 gig bands ) Multi-mode
( SSB - CW - FM modes)
Transceiver.

Any info would be appreciated.

Thanks

Hi all,

This is probably a silly question... be gentle...

I'm refurbishing the Drake AC-4 power supply that goes with my TR-4C/RV-4C station. Is there any reason for me NOT to install a 3-wire line cord in place of the old 3-wire cord? I don't care about the unit being "concours correct". I am just concerned that there might be some obscure reason, like AC hum problems or something. I've installed 3-wire cords on Heath, Swan, National, and other supplies without problems, but this is the first Drake supply that I've ever had to do any work on.

Do it. Be safe. Just make sure that you get the right
size/configuration for the line cord & Heyco strain relief (e.g. don't
use a flat line cord in a strain relief made for round cord).

regards

Does anyone have any operating experience on the antenna grounding aspect of this antenna. The information booklet says that you should install a wide flat strap attached from a screw adjacent to the coax connection to enable correct operation and workable SWR figures. However when listening to other operators of this antenna who are using the triple mag mount set up, which is what I intend to do, they are saying that they appear to have no problems and achieve more than reasonable SWR readings.

I am wondering if there is sufficient coupling and sheer area of metal body available given all the insulation installations on todays modern cars and wether comparisons have been made with a ground strap or not.

Any experiences, comments and installation descriptions on the above issue would be very much appreciated,

Thanks

Martin.

A ham radio license, a transceiver of some sort, and an antenna.

>I am reading the postings and see that you are all experts, but I have
>no idea where to start, and do not just want to go into Radio Shack and
>ask them without first having some idea.

This would be rather futile. Radio Shack has, for all intents and purposes, abandoned the amateur-radio business. You can still get some wire and connectors there, but they no longer sell the radios... and the chance that any given Radio Shack employee knows anything about ham radio is asymptotically closer to zero.

You'll probably end up mail-ordering your radio from one of several chains who have good reputations (Ham Radio Outlet, and Amateur Electronic Supply the two biggies, I believe). Since you're just getting started, you might consider buying a used transceiver of some sort from a ham in your area.

> I do not wnat to buy
>unncessary equipment or the wrong things. I want to be able to hear and
>respond to people around the world when atmospherics allow, and not just
>my region.

For that, you'll almost certainly need an HF radio and a license to use it, which means you'll need a General-class license, which means you'll probably need to do some studying. The simpler Technician-class license (very simple exam) currently does not allow for transmission privileges on the HF bands - it's usable only for VHF/UHF frequencies, which probably won't get you more than 100 miles or so. This may change sometime later this year, depending on how the FCC decides to act on several petitions currently active.

> Also, please suggest a magazine that is readily available
>that will give me the basics that I can start out understanding what
>equipment is needed, what it does, and what does it best.

The two major monthly magazines are 73 (published by the ARRL, available as a part of an ARRL membership, and I believe it can also be purchased separately) and CQ (an independent magazine).

I'd suggest going to http://www.arrl.org and taking a look at their offerings, both on-line and via their store. The book "Now You're

Talking" gives an introduction to ham radio, and has sufficient educational material to enable you to pass the Technician exam. They have many additional books available which explain the more involved aspects of ham radio - licensing (General and Amateur Extra), HF operations (country- and world-wide), etc.

> Also, how I
>can do this without an outside antenna, or with just stringing up some
>wire around the apartment?

The book "Stealth Amateur Radio" has a bunch of suggestions for indoor and "covert" HF antennas. It's definitely possible to have country- and world-wide contacts using an indoor antenna, although it's certainly going to be easier if you have a full-sized outdoor antenna of some sort.

> I also get the idea that some of this can
>now be done with a computer? How?

One common way is to hook a computer's sound card interface up to an HF radio - in effect, using the computer's CPU and sound card as a specialized modem. This allows for digital "keyboard to keyboard" contacts, using modes like PSK31. These can be very efficient, allowing contact even at very low power levels and under adverse propagation conditions.

> And if there are some groups in the
>Northern Virginia region that will allow beginners to sit in on their
>meetings and go to field events to see how things operate, I would
>appreciate that information as well.

Almost certainly! The ARRL has a list of ARRL-affiliated ham clubs (see their web site) and there are quite a few nonaffiliated clubs around. Almost all clubs welcome visitors and new members (many quite eagarly so!).

Your timing is good. ARRL Field Day is coming up at the end of June. If you can find a club running a Field Day operation in your area, I'd strongly encourage you to visit it. It's quite possible that they'll allow you to get on the air, for either local or long-distance contacts (this is legal even if you don't have a license, as long as their's a licenced ham operator in control of the radio).

The ARRL magazine is QST not 73. Once upon a time, QST could be purchased
at book stores but this was discontinued as the ARRL did not very many
copies this way. Now you have to be a member to get QST.

Au contraire. I can find QST and QEX at several places which sell
magazines, including some electronics shops.

Also, 73 magazine officially shut down down a year or so ago.

For what the OP wanted, the ARRL book used to prep you for the Tech
exam, "Now You're Talking", covers equipment with a decent overview,
although not specific models and what not.

Choosing which area of ham radio interests you will narrow the amount
of research needed.

Happy trails,

Certain forms of BPL could render HF operations difficult or
impossible. There's a strong concern in the amateur-radio and SWL
communities that [1] BPL could kill HF ham operations in many areas,
[2] the manufacturers of the equipment, and the prospective users of
it are being less than fully honest about its possible effects and its
economic benefits, and [3] that the FCC's current political makeup
makes it quite possible that the FCC will turn a semi-blind eye to
actual interference problems caused by BPL operations, and will refuse
to protect licensed operators against interference as their legal
mandate requires.

How it will all actually work out, remains to be seen.

WRONG! There are still some book stores that sell QST. I've seen them in
"Barnes and Nobles" Book stores in the city of Pittsburgh as recent as a few
weeks ago.

I'm not sure why that's happening.

Dee is slightly wrong is using "once upon a time" because that suggests
a long time ago.

Traditionally, QST was not available on the newsstand. It was distributed
to ham stores and suitable electronic stores, but was not generally available.
Then ten to fifteen years ago, after the issue came up many times over
the years, the ARRL board of directors decided that the magazine should
be on the newsstands. They discarded the reasons why they'd previously
decided it was not a good idea, and accepted that there were good reasons
for the magazine to be there.

Then, a few years back, they changed their mind. Obviously it suddenly
disappeared from newsstands. But, someone at the time emailed the ARRL
to ask about this, and posted (I think it must have been to
rec.radio.amateur.misc though I can't give a time period) the reply from
the ARRL, which said they were no longer doing it.

I have no idea why you are seeing it, but indeed there was a change
of policy some years back to take it off the newsstand.

One reason MAY be if their membership is drying up, the extra magazine sales will help support their cause. Sooner or later, all "closed" groups, must open the doors or lose funding - when they lose those who've funded them for so long. I've seen it in many instances.

Since Drake recommended grounding the chassis. There should be no problem
connecting the chassis to the ground on the three wire plug.

The consensus about these antennas seems to be that they're very
convenient, but can be quite inefficient if you're using them on
frequencies well away from those where the dipole is resonant.

> also intersted in desgins based on the
>isotron.

I don't have a good sense of how the Isotron is _supposed_ to work
(according to its manufacturer). What little I've heard of its actual
use in the field suggests to me that it, like many other "miracle"
short vertical antennas, is actually very dependent on radiation from
its coaxial feedline and its support mast. The Isotron itself seems
to act less as a radiator, and more as a sort of end-of-feedline
transmatch between the 50-ohm coax (interior) and the mast and coax
braid. Trying to reproduce one, homebrew, and to get good performance
thereby seems to me to be a recipe for severe frustration.

See http://www.cebik.com/radio.html and look at the articles on the
T2FD and the Folded Dipole.

It'd be a booger to build one, what with all the separators, etcetera.

Why not just put up a regular dipole?

Re the Isotron.

You may wish to look up an IEE paper on Electric Slot Radiators by
Robert K. Zimmerman Jr.

I thought the same as you before I tried one.

One test was to by-pass the feeder altogether. I connected a simple
crystal controlled 160m 1w rig directly to the feed point. Using an AEA
analyser brought the antenna to resonance.

I then measured the field strength using a Potomac FIM.

I then added 15 metres of 1/2" Cellflex as a feeder, relocated the
transmitter, made an insignificant adjustment to the antenna and took
another reading.

The loss through the short length of cable was only around a dB.

I was the very first person to get Ralph at the factory to design a AM
broadcast band version for the low power (1w EMRP) license holders here
in the UK.

A well setup station, at the top end of the band typically covers a 5
-10 mile radius with reception on a portable radio. The end users are
happy with that as the terms of the license only allow coverage over the
campus!

Sorry for being a little OT, but I'd think this is where the knowledge is. I've been asked by a few non-ham friends to pick a GMRS radio for them. They are going to be in a five mile square area, and could be anywhere in that area. There are no tall buildings and the land is mostly flat. They want to have the ability to talk to each other reliably with good sound quality. They've ruled out FRS on their own, and I agree, but they can't decide between GMRS or CB. I think the Icom F21GM <http://www.universal-radio.com/catalog/frs/1606.html> looks good, but I'd love to have input from others that know more about radio than me.

No, it's not the fan, it's the oscillator I'm hearing, but I don't know
what components are doing the vibrating. The fan fires up occasionally,
but that noise is entirely different.

Thanks for the response.

I've heard switching PSUs begin to hiss when the electrolytic filter capacitors start to fail. These caps are in a stressful operating environment - high ripple currents, and sometimes high temperatures. They can dry out or leak (this is a particular problem with a whole batch of Taiwanese-made caps which were manufactured with a defective electrolyte formula), their ESR increases, and the circuit becomes audibly noisy. I don't know whether the noise is direct microphonics from the caps, or from the toroids.

Consider swapping out any suspect 'lytics in the supply with new ones, preferably ones rated for switching-supply operation at 105 degree C.

It was hissing right out of the box, it's brand new.
I don't suspect so much that it's defective, I hear a lot of switchers,
it's almost as if there's a couple of popular frequencies, and I happen
to be able to hear one of them. If I knew what section is resonating
(physically vibrating and transducing the sound that is) I could try to
drizzle a bit of super glue on it.

Hi Dave,

It is unlikely going to be that easy. Usually there are also some resonant circuits, or at least one, and these frequencies are pretty far apart.

Here is what we did: I bought a modulator at Radio Shack for about $40. It's output frequency can be programmed digitally via push button to any channel in the UHF range. Then video and audio is fed from the VCR into that modulator. Its RF signal is fed into the house distribution and now we can watch videos at any TV in the house.

Regards, Joerg

Not what you want exactly but, take the RF output and put it into another VCR. Select Channel 5 on that VCR's tuner. It will now take your old units Channel 5 and put it out on Channel 3 or 4 (switch selectable). Or use the newer VCR's A/V inputs if the old unit has A/V outputs. You probably have a VCR or two lying around, so it won't cost you much.

Hi Dave,

If you go for that just make sure the channel setting is not lost during a power outage. The Radio Shack version we have does keep the channel memorized. You can also select cable frequency mode or terrestrial (normal) TV channels. But not VHF, it is only UHF.

After reading all the posts so far, the question not asked is 'why use the
RF output at all?'

Hi Dave,

If you can live with Ch3/4 that would be even cheaper. But we couldn't because we wanted to distribute into the house coax network and there is a strong station on Ch3, and a weaker one on Ch2. Other than that our box looks similar, except for a couple 7-segment displays and progamming buttons.

You could also come out of the 3/4 " machine with video and audio.(I
doubt that it will be a stereo output) and put that into the ch 3
modulator and you will have ch 3 out. Lenny Stein, Barlen Electronics.

That is damn ingenious! You see VCR's lying around for garbage pickup,
so you could get one for nothing.

I remember loading a ham friend's Viking Ranger (60 to 80W) into a 75
ohm dipole without a balun, and then squeezing the pickle and being
introduced to a rather nasty fellow called R.F. Burns. :-( It's not
nice to have a coax that radiates!

# 3425. FS: Wavecom w41pc rtty decoder package!

Newsgroup: rec.radio.amateur.equipment
Date: 2004-06-08 03:20:46 UTC
From: Chuck Yarbrough <wampus@nc.rr.com>
Message-ID: <63cac01225bonhgmjon155le854pdag0jm@4ax.com>
Source record: 21027

Hi all--I am selling my Wavecom w41pc (not MKII) rtty decoder card package. It includes the ISA w41pc decoder card, Diskettes with v.4.4.0.0 software, a CD with the latest version 5.6, and the official Wavecom User's Manual in the original Wavecom binder. It also has the original factory checklist from Wavecom certifying that the card has passed all tests.

This is a VERY high-end and rare decoder (especially to find it in the US). It also costs approximately $4900 if you bought it from Wavecom. I am asking $1400 for the whole package shipped CONUS. Other locations need to inquire about shipping to your QTH.

While this is the original w41pc card, and not the current Mark II, Wavecom software works the same on both. The MkII added a descriminator output jack on the card and also shrunk the card a bit. Functionally the original and the MkII work the same (same modes, analysis, etc).

Please see the Wavecom website for further details.
http://www.wavecom.ch/products.htm .

By the way, Wavecom provides FREE web downloads of upgrades in its software. Your decoder will stay current for a long time!

Please respond to me off list at wampus@nc.rr.com.

THanks
Chuck KI4BZJ

Dave,
Many people never saw 3/4" Umatic Video Players / Recorders. I worked on a
lot of Sony, some Panasonic & JVC and a few NEC. Sony was the best and they
probably still have parts available.

You could always poke around inside with an insulated probe to shut
down the oscillating/vibrating component, and go from there.

Please note: Insulated probe does not mean a screwdriver with a plastic
handle (yes, I've known people that used them).

# 3450. DJ-V5T Programmer (RT Systems) - Install without floppy - solution

Newsgroup: rec.radio.amateur.equipment
Date: 2004-06-09 22:25:38 UTC
From: eelliott@tritel.net
Message-ID: <73fe8179.0406091425.4509b830@posting.google.com>
Source record: 20952

While trying to install RT Systems "DJ-V5T Programmer" on my new floppyless laptop, I received the following error: "The was a problem detected with the disk. Error: 1023". (Yes, the "The" typo is in the software.) Among various unsuccessful attempts, I tried installing over the network with the original floppy in a networked computer and locally from the hard drive of the target laptop, including one attempt to install from the root directory of C:.

cloningsoftware.com's response to this problem was:
"Given that your machine does not have a floppy drive, I would recommend that you get that programmer on CD as it is now offered. We offer that upgrade in media at half price to those with the programmer. Send your original diskette with $10.00 to the address in the
signature along with your return mailing information for the upgrade."

Not happy with paying for software multiple times, I arrived at the following solution. The key is to transfer the floppy boot sector to a media format (e.g., Compact Flash, SD Card, USB memory 'key') that the laptop can read. In my case, I had an old 8MB Compact Flash card collecting dust. You'll want to use media that you can keep in case a re-install is necessary.

SOLUTION:

On a PC with both a floppy drive and a interface for your chosen media, use WinImage 6.1 (free 30-day trial) to extract setup.exe and the boot sector image from the floppy and save to a temporary file

Use Windows Explorer to change the volume label on an empty Compact Flash card to match the floppy (not sure if this step is necessary)

Use WinImage 6.1 to write to write the boot sector binary and setup.exe to the Compact Flash card. (This took me a few attempts due to learning the WinImage software.)

Stick the Compact Flash Card into PC Card adapter and insert into laptop.

Run setup.exe.

Installs fine.

# 3451. FA. GE Insulation Guide Book

Newsgroup: rec.radio.amateur.equipment

I have the following books for sale. I will ship via media mail to keep costs down. Prices do not include shipping. I will ship overseas.

Fundamentals of Single Sideband - Collins Radio Book.....$40 plus shipping
This is the classic Collins Radio SSB book. Excellent condition. Only marks are a former owners name on the cover.
http://members.cox.net/radiostuff9/collins_ssbbook.jpg

Book - 200 Meters and Down by Clinton Desoto.....$25 plus shipping
This is a reprint published in 1981. This is a fascinating book about the early history of ham radio up until 1936. This book is in excellent condition with no markings at all and clean pages.
http://members.cox.net/radiostuff9/200metersanddown.jpg

Care and Feeding of Power Grid Tubes - Eimac Book.....$20 plus Shipping
This book published in 1967 covers theory, technical data and suggested circuits for transmitting tubes with an emphasis on Eimac transmitting tubes. The cover is shopworn. The insides of the book are in excellent condition and it still has the "Tube Performance Computer" on the inside back cover. This is a plastic transparency that calculates performance.
http://members.cox.net/radiostuff9/eimac_book.jpg

RCA Transmitting Tubes Technical Manual.....$15 plus shipping
This book published in 1962 covers all RCA transmitting tubes prior to 1962 and has theory, technical data and suggested circuits for transmitting tubes up to the 4 kW input power level. The cover is shopworn. The inside pages are in excellent condition.
http://members.cox.net/radiostuff9/rcaxmittubebk.jpg

1995 ARRL Handbook.....$10 plus shipping
http://members.cox.net/radiostuff9/handbook95.jpg

ARRL Book: Your VHF Companion.....$5 plus Shipping
http://members.cox.net/radiostuff9/vhf_book.jpg

ARRL Book - The Mobile Manual for Radio Amateurs.....$10 plus shipping
1962 edition. Cover is a bit worn - inside pages are excellent.
http://members.cox.net/radiostuff9/mobilebook.jpg

ARRL Book - FM and Repeaters for the Radio Amateur.....$8 plus shipping

1962 edition. Cover is a bit worn - inside pages are excellent.
http://members.cox.net/radiostuff9/fmbook.jpg

Thanks for looking.

New program CHOKEBAL.exe

Design and performance of a choke balun wound on a ferrite ring in
conjunction with a balanced transmission line and antenna.

The percent current unbalance on the line is estimated and how it varies
with frequency, line-length, etc.

Sorry, this program does NOT tell you how much power is radiated from the
feedline.

Program size 37 kilo-bytes. Download CHOKEBAL in a few seconds from website
below and run immediately. It's free issue.

Hi all'
I'm looking for simple scheme of one-chip FM-reciever with sensivity not bad
then 0.3 mkV on antenna input. which works with teleskopic (1meter) antenna.
device mast have nonoriginal parts (such as microcontrollers controllers).

Send sheme to me trans@top7.ntu-kpi.kiev.ua .

Thanks all for help.

I have the following items for sale. Prices do not include shipping. I will ship overseas.

National Type MCN Dial.....$35 plus shipping
Used but good condition with a clean dial face
http://members.cox.net/radiostuff9/natdial.jpg
http://members.cox.net/radiostuff9/natdial2.jpg

Lafayette Dial New in Box.....$30 plus shipping
http://members.cox.net/radiostuff9/laffdial.jpg
http://members.cox.net/radiostuff9/laffdial2.jpg

E.F. Johnson Speed-X Bug.....$140 plus shipping
Beautiful 1950ï¿½s bug - Les Logan Design
http://members.cox.net/radiostuff9/johnsonspeedxbug3.jpg
http://members.cox.net/radiostuff9/johnsonspeedxbug4.jpg
http://members.cox.net/radiostuff9/johnsonspeedxbug5.jpg

Unbuilt Heathkit HD-1250 Solid State Dip Meter.....$225 plus Shipping
This unit covers 1.6 to 250 MHz with 7 coils and runs off of a 9 volt battery. Everything is there and still in the original packing. The only issue and this is a problem with all of these units is that the black foam in the case has disintegrated. The new owner will need to clean this off with a solvent. The coils have been removed and placed in a separate bag. I have had several of these units and they all have had this problem no matter what part of the country they have come from.

http://members.cox.net/radiostuff9/heathhd12502.jpg
http://members.cox.net/radiostuff9/heathhd12503.jpg
http://members.cox.net/radiostuff9/heathhd12505.jpg

Precision E-200-C Signal Generator.....$40 plus Shipping
This unit covers 90 kHz to 120 MHz. It has two separate adjustable RF outputs as well as internal modulation and adjustable AVC voltage. The tuning dial even has a smooth vernier movement. This is a clean working unit. It does not have probes or test leads. Includes a photocopy of the manual.
http://members.cox.net/radiostuff9/precision_siggen.jpg

Drake TR-22C Vintage 2 Meter
ï¿½Shoulder-Heldï¿½.....$35 plus shipping
Early 1970ï¿½s 2 meter radio made by Trio-Kenwood for Drake that runs on batteries or 110 vac.. Includes several sets of crystals and a photocopy of the manual. No microphone. Works well.

http://members.cox.net/radiostuff9/tr22c.jpg
http://members.cox.net/radiostuff9/tr22c2.jpg
http://members.cox.net/radiostuff9/tr22c3.jpg

Vintage Fairchild "Nixie Tube" Multimeter.....$40 plus
shipping
This is a Fairchild model 7050. This is a voltmeter and an ohmmeter that
measures up to 1.5 kV and 15 megohms on the resistance scale. This is a
nice working unit and accuracy looks good.
http://members.cox.net/radiostuff9/fairchild_nixie_meter.jpg

Jackson Model 103 Tube Tester.....$30 plus shipping
Older tube tester in working condition.
http://members.cox.net/radiostuff9/jacksontubetester.jpg
http://members.cox.net/radiostuff9/jacksontubetester2.jpg

Heathkit Transistor Radio.....$50 plus Shipping
Introduced in the fall of 1957. A kit radio from the early transistor
days, this radio uses seven socketed metal-cased transistors (2N252,
2N253, 2N254, 2N185, 2N185, 2N238). It's powered by six flashlight
batteries. The radio shows some wear but overall is in nice shape for
it's age. It works intermittently.
http://members.cox.net/radiostuff9/heathkit_xstrradio.jpg
http://members.cox.net/radiostuff9/heathkit_xstrradio2.jpg
http://members.cox.net/radiostuff9/heathkit_xstrradio3.jpg

Triplett 800 VOM with Manual.....$45 plus Shipping
Very clean working VOM with original manual
http://members.cox.net/radiostuff9/triplett_800.jpg
http://members.cox.net/radiostuff9/triplett_8002.jpg
http://members.cox.net/radiostuff9/triplett_8002.jpg

Western Union Legless Telegraph Key.....$35 plus Shipping
http://members.cox.net/radiostuff9/wu_key.jpg

LS-166/U Dynamic Loudspeaker for PRC-47 Radio Set.....$30 plus
Shipping
http://members.cox.net/radiostuff9/prc47spkr.jpg
http://members.cox.net/radiostuff9/prc47spkr2.jpg

Thanks for looking.

Hi Rod,
I'm not sure that an opinion is a commodity. A commodity is something of
value. And the value depends on who's opinion it is. And one never knows
for sure. 73 James

# 3481. ID Help - Leeds & Northrup Potentiometer

Newsgroup: rec.radio.amateur.equipment
Date: 2004-06-12 02:13:26 UTC
From: Ed Bailen <n5kzw@arrl.net>
Message-ID: <o0pkc058sn3tj4bu0nfe6icl91mdmrob43@4ax.com>
Source record: 20983

I hope this isn't too far OT; it is regarding a piece of electronic test equipment.

Knowing my fondness for older test equipment, a good friend has given me a Leeds & Northrup laboratory-grade potentiometer. I'd like to find more info on it, but I'm hampered by the missing model number plate. Outside of that, the unit is in beautiful shape.

The left side of the unit is a galvanometer. Just to the right of the galvanometer section are two rotary controls. The upper on is a pot that is used to enter the voltage of the internal standard cell. The lower control is a rotary switch labeled MILLIVOLTS and the skit of the knob has two scales (0.0 - 7.5 mV and 0.0 - 1.5 mV). Further to the right is the main slidewire with two ranges (0.0 - 5.5 mV and 0.0 - 1.1 mV). Further to teh right is the reference junction slidewire, again with two scales (0.0 - 5.0 mV and 0.0 - 1.0 mV). On the right side of the case are two brass disks labeled FINE and COARSE that are connected to pots in series with the internal battry (not the standard cell).

Can anyone give me an idea as to what the model number might be, and/or a pointer on how to make temperature measurements with this unti? It came with two thermocouples. I'm particularly interested in the use and setting of the FINE and COARSE controls.

Thanks,
Ed Bailen

As Bill noted, it's telco. Looks like something we used to make, or
at least supported at the end of its life. I suppose a 3-decade
frequency range isn't extreme, but I'll bet it's more (for the
achieved performance level) than most hams get in homebrew directional
couplers. ;-) It's possible I could find more info on it if you're
seriously interested.

Cheers,
Tom

I am friends with the fellow that owns Kenwood Service Center East.

It is located in Virginia Beach VA off of Lynhaven Parkway. He is a really cool Ham and if you have problems, he will help you himself, although it may take a while for him to get back to you. In addition to his work with that franchised service center, he is in the Coast Guard Reserve and was called up a year ago so he spends a lot of time in Norfolk as an east coast communications specialist with the Guard.

Chuck Ripple (WA4HHG) and his people will treat you right.

The frequency range, the empedance and the plug, all point to use with
"L" carrier
analog multiplex. The 124 Ohm would be a balanced line and consist of a
shielded pair.
I don't know if 124 Ohm single conductor shielded cable was used

Hello,

I recently purchased a used AEA PK-88 Packet Controller at a hamfest
without the manual. I have looked for it online without much success.
I was wondering if anyone could tell me where I could obtain it online.
Alternatively, are there any hams with the manual willing to make a
copy (or even just an electronic scan) for me for a small fee?

Responses via e-mail would be appreciated. :)

Thank you,
John L.

I am fixing up an Alinco 206T 2-meter mobile transeiver that I bought recently at a local amateur swap sale. I have a partial manual, but several sections missing and could use some help. According to Alinco, neither the owner's manual nor the service manual are available.

Anybody able to help me - Thanks in advance.

## 3491. Update! Filing FCC comment against BPL

Newsgroup: rec.radio.amateur.equipment
Date: 2004-06-13 01:12:11 UTC
From: yea right <spam@spam.spam>
Message-ID: <pan.2004.06.13.01.12.11.784504@spam.spam>
Source record: 20993
Cross-posted to: rec.radio.amateur.swap,alt.radio.amateur,rec.radio.amateur.antenna,rec.radio.amateur.equipment

The information about filing a FCC BPL comment on the ARRL web page was outdated. There is a new case number that should be used. 04-37 is the correct case number.

It only takes 5 minutes to file a comment with the FCC against BPL.

Message-ID: <257c0775.0406130656.34c85dcd@posting.google.com>
Source record: 20996

Gurus,

My brother who is working for an NGO is east africa wants me to buy him an HF ham radio where he can communicate with his colleagues in other parts of the world. His colleagues use CODAN, but he can't afford that brand.

A local dealer is recommending that I buy FT-857 with ATAS-120.

Here are my questions?

1- Is this combination a good fit and how reliable is it?
2- Can he communicate with other radios as far away as 3000 miles?
3- Do I need a duplexer if he is using just the HF band?
4- The radio will be mounted on a land cruiser? Where you recommend the antena mounted on?

Many many thanks for your help.

- Nur

Hello John, hope you find the manual, if not, i just might be able to get my hands on one. Did send email to friend that has a pk88, might be able to borrow and scan for you if so available.
Keep in touch ok, will let you know as soon as i get answer.
73 and gud luck.

I just saw a 389 on e-pay go for about a grand. The CV591 alone is
worth far less, and I'd keep it if you have a 390 or other BA with a
455 kHz IF.

I don't know, but does the 389 have 455 kHz output? If so, then the
591 I would think would be worth keeping.

Message-ID: <20040614081212.09303.00001136@mb-m03.aol.com>
Source record: 20914

FS: GRC-9, S-27, WS38, WS47, R1155, NRD-525

GRC-9 HF tx/rx with dc mobile psu, leads, whip holder, mobile mounting tray and set front cover. £120

2 x Hallicrafters S-27 HF/VHF receivers. Set One: In need of restoration but front easily removed and as the lettering is engraved then an easy job to restore. New mains tranny and audio o/p. Set Two: good front, rewired and new components. Orig mains tranny, plus lots of other bits, missing the 3 ceramic front end valve holders (have replacements to send with set) The two would make up one nice set. £100.

WS No38 Mk II, with headphones, throat mic, and junction box. All valves present, looks fine inside, untried, but having all the compents needed to make a working set or display. Offered as is for £100.

R1155 (A or B ?) suitable for restoration. All the major component are there, supply plugs, valves, caps etc. One ift has been removed ? dont know why, but theres a replacement supplied. Front had the tuning dial, faceplate and knob removed but all supplied ready for re bolting in. Condition: rx front, fair, needs a good clean and a respray as does the case, a good rub down, primed with aluminium primer and sprayed black. Decal off the range switch but a new set can be obtained off the web at various places. Offered as is for £100.

R1155B, unfortunatly, its been moddified a little, internal ac mains psu, audio output stage, and a few of the controls removed, but, it could be easily returned to cosmetic decency, while retaining the advantage of being mains powered. While it receives the Light Program fine I would be inclined to change a few if caps and give it a tweek. Offered as is for £80.

WS No46, set only, no case or acc's. Recently been working, fitted with coil pack to cover 40 Mtrs, case in good condx, one knob not orig but I may well have the one needed if I can find it !. Offered at £100.

NRD-525 General Coverage Communications Receiver Coverage: 90-34000 kHz Readout: Digital Fluor. 0.01 Modes: AM/SSB/CW/RTTY/FAX/ Circuit: Double Conversion Features: ¼" Head. Jack, S-Meter, Attenuator, NB, Mute Terminals, ANL, Line Out Jack, RIT, BFO, AGC, PBT, Speaker Output, Keypad, 200 Memories, Up-Down Tuning, Tone, RF Gain. Accessories. New Price: $999-1249 Used Price: $520-590 Comments: Memories store: frequency, mode, bandwidth, AGC and ATT. This set has the airband, 2Mtr, marine band, 70Cms options fitted.There is also available the matching extension speaker….. £300.

postage extra, collect only on GRC-9 and S27

# 3514. Drake TR-4C questions

Newsgroup: rec.radio.amateur.equipment
Date: 2004-06-14 13:12:00 UTC
From: k5dh@raytheon.com
Message-ID: <Auhzc.1$SD2.0@dfw-service2.ext.ray.com>
Source record: 20916
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

Drake experts,

I have some TR-4C questions:

(a) What's the typical power output on CW and SSB?
I suspect my PA tubes are weak.

(b) Any way to modify the T/R switching circuitry
to have the microphone PTT switch control the
T/R switching directly, instead of biasing the
VOX amp tube to control the relays?

(c) Is it practical to try to upgrade the rig to
TR-4Cw standards? Are the parts available?
How about the CW filter?

(d) I know there's a mod out there to replaced the
6JB6A's with 6146's in the 4-Line transmitters.
Has anyone done this with a TR-4 transceiver?
With matched triplets of 6JB6A's going for near
$100, the cheap and plentiful 6146 might be a
good alternative.

(e) Anyone have any worthwhile improvements for the
receiver? I've printed a number of articles off
the internet on Drake mods, but I haven't found
much for the transceivers. It's mainly stuff for
the 4-Line twins.

Thanks and 73,
Dean K5DH

I'm tired of paying $35 for power cable assemblies for 100W Yeasu xcvrs. If I had the connectors I could build my own cables for a lot less and do a better job of it than Yaesu does. Does anybody know of a source for the connectors?

Tnx, Brian w3rv

This looks FAKE, so you may want to go to the FCC site directly instead of
using his link.
Message-ID looks forged as well
Could be gathering addresses for spamming.

http://www.powerwerx.com/ - look under "OEM products". The Molex
6-pin connectors used on many HF radios are currently on sale for
$6.95 each.

Source record: 20922

Hi Gang,
I have a mint Yaesu FRG-7 shortwave receiver that I'd like to swap for a Kenwood TS-440 HF rig. The FRG-7 is in excellent cosmetic as well as electronic condition. Good sensitivity on all bands, no scratchy pots, etc.
Really, a no excuses radio.

I do NOT want a project TS-440, but I'm not expecting a mint radio either. Must be 100% working with full power out on all bands, and good RX sensitivity. Will consider similar rigs, but would prefer this one.

Steve W6SSP

Can you say P A R A N O I D ????

The link on the guy's web site to file a comment IS the FCC's web
site:

http://gullfoss2.fcc.gov/prod/ecfs/upload_v2.cgi

The instructions on the ARRL web site to file a comment take you to
the exact same web site.

ARRL sez:

Goto http://www.fcc.gov/cgb/ecfs/

and click SUBMIT A FILING

which takes you to:

http://gullfoss2.fcc.gov/prod/ecfs/upload_v2.cgi

Turn in your badge, Dick Tracy, you are getting paranoid in your
old age. Anybody who wants to send HAM SPAM can get thousands
of email addresses from QRZ.com, no need to collect them one
at a time by having people fill out forms.

# 3526. FS: Drake, JRC, Racal, Wavecom accessories

Newsgroup: rec.radio.amateur.equipment
Date: 2004-06-15 02:49:39 UTC
From: Chuck Yarbrough <wampus@nc.rr.com>
Message-ID: <vsosc0trqjvtmst5ilh97i8ch7a4vishm1@4ax.com>
Source record: 20928

Hi all--I have the following relatively rare accessories for sale.

JRC CMH-530 RTTY Board w/CKJ-61 Mk/Sp Tuner Unit $75.00
JRC CGA-118/CHE-85 VHF/UHF Boards Unit $150.00
JRC CMH-365 Extender Board $70.00
JRC CFL-233 (YF455DE) 1.0kHz SSB filter $75.00
JRC CFL-232 (YF455DQ) 500kHz CW filter $85.00

I also still have for sale:
Wavecom w41pc RTTY decoder board/Manual/Software $1000
Drake SL500 500Hz CW filter (R7/TR7) $50.00
Drake SL1800 1.8kHz SSB filter (R7/TR7) $50.00
Racal RA6790/GM Mode and Freq LCD replacements (NEW) $50.00

All filters are used, but have the install nuts and are guaranteed to work. All other boards have been used but are complete and work perfectly. The Racal LCD replacements are NEW in package with install instructions from Gary Wingerd (Racal Service Wizard).

Please email me with any questions or offers. These are all extra to my needs and are not being used. Please reply to me at wampus@nc.rr.com.

Thanks
Chuck

You should look at Linux or Mac so you can regain the use of your
computer. You should own your computer and not vis-versa!

;-)

Here is the webpage in plain ASCII text with a link to the FCC website.
Please, making a comment will only take a few minutes.

/*********************************************/

The FCC has extended the comment period for BPL. If you value radio, this
may be the last and only chance to have your voice heard to stop BPL from
destroying your hobby. The FCC has extended the comment period for BPL.

It is VERY simple to file a FCC comment. Click the link below and enter

04-37

in box #1 (proceeding number) and fill in the blanks. The simplest way to
comment is to type your comment into the box on the bottom of the form.
Sample comment below.

http://gullfoss2.fcc.gov/prod/ecfs/upload_v2.cgi

If you see fit, please post this to as many portent groups as possible
because numbers count!

More info at http://www.arrl.org/news/stories/2004/02/12/5/?nc=1

If you can't think of any thing to type or wish to make this as painless
as possible, you can cut-n-paste the comment I typed below.

/*****************************/

In Writing, I wish to persuade the FCC from allowing BPL to be
implemented. The destruction or at the least, deterioration of the
shortwave bands is not only a violation of ITU laws that protect

international broadcasters from interference and jamming, it will be destroying many people's life hobby. Amateur radio will be reduced to users with high-power amplifiers and large antennas. Emergency communications will be hindered to levels directly responsible for the loss of life. Also, this will hinder military HF comms reducing national security

There are many technologies that make BPL unnecessary. BPL will never be able to carry the high bandwidth demands for mass distribution of video much less the up-and-coming HDTV.

Thank You!

# 3543. Unbelievable a My story

Newsgroup: rec.radio.amateur.equipment
Date: 2004-06-15 14:55:14 UTC
From: Zoran Dimitrijevic <zorandi@EUnet.yu>
Message-ID: <can2pf$685$4@news.eunet.yu>
Source record: 20945

Unbelievable a My story
Dear Sir,
Please I' need Help because Im in Ghetto.
After fortyone years my life, former ignorance nothing about own parentage, first time cognition for own parentage and this owing character and feature positive, neredity parentage one of most historical character of Serbia. Considering that myself come to improbable argument cognition abut project of extermination Serbia also off eighten sentury, I pleasure my story to divide with publicity to be entiled to they know who and what is done last 200 years, since today and they have pretence to know rightly truth, and how are turn historical character and how adversity done to myself and my parentage this country and this nation.

Decade secrecy this nation, only this and my, after 5. Ocotober 2000, as normal citizen, uncompromising with injustice, last discerning chance for realization principal right, who is all of my life refuse, and I am unlock gate of evil, my insatiable hunger of right, on bizarre mode relate myself to cognition parentage of Obrenovic Royal dinasty of Serbia, and only of this my pedigree.

Fact that I am never can to receive replay; who is my ancestral. Fact is, trought my life like sign opserve me number 13. My father is born 1.3.1925, I am born 13.5.1962, cadastral number placing in my ownership is 1305/45, number of my house is 13, that is place where I am living, throug is first in beginning street. In community registry houses numbers in my houses numbers is enrol name of nameless person.
Oddity which does heppen to myself, present in many bizzare randomness and yet variant abnormal and oddity feature, and particulary, that because anything of my reference competance institution rezult obscure respond which bring theirs in criminal act and same of this explicitly evidence this.Every penal process who is I animate is pass in extremly unaccountble mode, and prosecutors ourself relate in, with explicitly data, on inquest like convictig. My family and myself brow of regional police court, Elektrodistribucija, Telekom and likevise. In unwonted mode with one letter with argument against organize criminal who is myself send (26.2.2003) late premier Dr. Zoran Djindjic, who is murder when my senior son is birthday, and after 100 years of murder last Obrenovic, 1.3.2003 myself do extrude smutty cash 20000 DM, organize criminal in Telekom what is showed on Beogradska hronika Belgrade cronicle - RTS, afterwards diector territory management Telekom Milan Zdavkovic is deprivation. I reference special prosecutor with own argument of mode how is murder premier, not reveive answer. Disregarding on my higt technical practice in sphere electronics (project), computer (program design and service), mobile phone etc., eminently approve patent crown "silver medal" with shape Nikola Tesla, and with participation in scientific programme RTS, existence my family and

myself is continually control on reef hunger. Otherwise on my family and myself is in often perpetration experiment removal, but considering that I know how they observance removal, they further attempt is neutralize.

Every this unlikly doings relate myself to argument cognition that is Kremansko prorocanstvo sect project holocaust Serbia for interest dinasty Karadjordjevic, church and afterwards UDB-e, and to currents days in every phase generation war. Because myself, my parentage who is decade edit on untruth mode and because nation, I must and sedire afore public expose true and identification, recognize, primary reason every badly feature who is doings this country.
Dear sir, considering that I own cululative material, and for fact that myself afore competent institution infirm, what demonstrative myself report ministry of repulica Serbia, special anpublic prosecutor V municipal court, becouse is eminently political specimen identified by myself, member of conspiracy I request to urgency for interview of detal amount rightly historical truth about Serbia in organ whom, if interested.
Dear, Sir, this story myself possibly warrant, unhoped interest for yourself organ, interest is above all is after 200 years raise onside truth, I hope yourself invite myself on interview and let my to expose irrefutable fact and argument on 300 strike page.
E.G. Argument how Elektrodistribucija (head electric hose in Serbia) perfidy steal nation in enormity mode, how Telekom (haed Communication house in Serbia) wash smutty money, how is individual, parapsiholoski operate raven safe community etc.

I have the following items for sale. Prices do not include shipping. I will ship overseas. Please reply direct to me, not to the list.

National Type MCN Dial.....$35 plus shipping
Used but good condition with a clean dial face
http://members.cox.net/radiostuff9/natdial.jpg
http://members.cox.net/radiostuff9/natdial2.jpg

Western Union Legless Telegraph Key.....$30 plus Shipping
http://members.cox.net/radiostuff9/wu_key.jpg

Heathkit T-3 Visual-Aural Signal Tracer.....$40 plus shipping
This unit is very clean and works great. Includes the probes and a photocopy of the manual.
http://members.cox.net/radiostuff9/heath_sigtracer.jpg

Hammarlund FM-50A Transceiver Two Way Radio.....$25 plus shipping
This appears to be a low band 50 MHz FM transceiver which I would guess is from the 1960's. It is missing some tubes including a 6146 final and I assume the opening in the front contained a speaker and grill. It is untested. Interesting piece if you collect Hammarlund equipment.
Untested
http://members.cox.net/radiostuff9/hamm_fm50a.jpg
http://members.cox.net/radiostuff9/hamm_fm50a2.jpg

Yaesu FTDX-560 Transceiver External Speaker.....$50 plus shipping

This speaker is in excellent condition and sounds very good.
http://members.cox.net/radiostuff9/ftdx560_spkr2.jpg
http://members.cox.net/radiostuff9/ftdx560_spkr5.jpg

Precision E-200-C Signal Generator.....$35 plus Shipping
This unit covers 90 kHz to 120 MHz. It has two separate adjustable RF outputs as well as internal modulation and adjustable AVC voltage. The tuning dial even has a smooth vernier movement. This is a clean working unit. It does not have probes or test leads. Includes a photocopy of the manual.
http://members.cox.net/radiostuff9/precision_siggen.jpg

Vintage Fairchild "Nixie Tube" Multimeter.....$35 plus shipping
This is a Fairchild model 7050. This is a voltmeter and an ohmmeter that measures up to 1.5 kV and 15 megohms on the resistance scale. This is a nice working unit and accuracy looks good.
http://members.cox.net/radiostuff9/fairchild_nixie_meter.jpg

Jackson Model 103 Tube Tester.....$30 plus shipping
Older tube tester in working condition.
http://members.cox.net/radiostuff9/jacksontubetester.jpg
http://members.cox.net/radiostuff9/jacksontubetester2.jpg

Oxford 15 Inch Speakers - Pair.....$45 plus Shipping
These speakers work and are in excellent condition.
http://members.cox.net/radiostuff9/oxford_spkr.jpg
http://members.cox.net/radiostuff9/oxford_spkr2.jpg

Triplett 800 VOM with Manual.....$45 plus Shipping
Very clean working VOM with original manual
http://members.cox.net/radiostuff9/triplett_800.jpg
http://members.cox.net/radiostuff9/triplett_8002.jpg
http://members.cox.net/radiostuff9/triplett_8002.jpg

LS-166/U Dynamic Loudspeaker for PRC-47 Radio Set.....$25 plus
Shipping
http://members.cox.net/radiostuff9/prc47spkr.jpg
http://members.cox.net/radiostuff9/prc47spkr2.jpg

Thanks for looking.

I've sent a LART to his ISP, for all the good that'll do. It may be
worth your while to follow suit, since some ISPs require utterly
unreasonable minimum numbers of gripes (e.g., from 30 different
sources in the case of one ISP) before they'll so much as warn
the subscriber.

Nahhh, let 'em all feel superior due to their "installed user base".
While the whole time they spend more and more of their efforts and
energy fighting off their inferior OS's security holes, we that use the
"non-standard" systems can simply do our work and play.

In article <vk2qc0pp2mjjf3scg3kfb05o4uks6mh1ta@4ax.com>,
steele.david@verizon.net/OMEGA says...

> What is the nomenclature for the Motorola HT programmer?
>
> We have everything from P110 to Sabers.

Wow.....

I can say, from direct experience and past history with the
Motorola Comm Sector (back when they still had company-owned service
shops) that if you're looking to program that wide a range of radios,
you're looking at a few thousand $$$ worth of hardware, software and
cables.

Motorola, prior to selling you the RSS (Radio Service Software)
packages will also require that you sign a multi-page license agreement
with terms that are Draconian at best. In essence, it says that whatever
RSS packages you purchase are yours, permanently, and that you cannot
resell, copy, or redistribute them to anyone else, ever. In short, the
license is not transferable in any way.

Programming most Motorola portables and mobiles requires:

(1) A couple of different computers; One old/slow 386-16/33 or so
for the MS-DOS based stuff, and a modern Windows system (running W98 or
2000, preferably -- Don't even think about using XP) for the later
stuff.

(2) A Radio Interface Box, commonly called a RIB. Expect to spend
between $150-$250 for a good one (in other words, one that won't corrupt
a radio's codeplug). You will also need the appropriate RIB-to-computer
cable.

(3) Many, MANY different programming cables. Just to handle
Motorola's portable line alone will require at least six different
cables which run between $140-$260 each. You'll require still more if
you want to do mobiles.

(4) The RSS. Software package prices vary between $75 to over $300
depending on how late-model the radio is that you're trying to program,
and there are different packages for different radio models.

As for CPS, used for programming the HT1250's and other "Pro"
series radios, good luck -- I had to fight with Motorola to get mine,
and that was over a year ago. These days, my understanding is that you
have to be one of their "Most Favored" dealers to even apply for the

(separate from the normal RSS) license.

I hope that gives you some idea of what kind of arrogant, greedy, stuck-up company (yes, I mean Motorola) that you're dealing with. They treated their employees like dirt when I was with them years ago, and they will do or say nearly anything to their customers to win the sale -- and then start nickel and diming them to death for "upgrades" and "support."

Part of why I started doing RF services through Blue Feather Tech (my side business) was to spare hams who wanted to use Moto equipment from having to deal with the RSS and programming hassles. I don't have the facilities to handle large masses of programming jobs, nor do I want to solicit 100%-commercial accounts, but if I can help with amateur radio-related programming, just drop me a line.

I hope that helps. Happy hunting.

# 3557. Radio Testing At SeaPac

Newsgroup: rec.radio.amateur.equipment
Date: 2004-06-16 05:50:45 UTC
From: Louis Bybee <louistroutbybee@comcasttrout.net>
Message-ID: <VcRzc.41782$eu.23769@attbi_s02>
Source record: 20809

If you will be attending the SeaPac Ham Convention at Seaside, Oregon this weekend be sure to stop by the Cascade Amateur Radio Society's booth and have your radio, or one you intend to buy tested. A complete test of all operating parameters will be performed, with results graphed, and printed out for your record.

We will offer this service Saturday only, on the main floor flea market area.

We have participated in radio testing at three other Ham Fests recently, with many happy and a few unhappy people after receiving the results. A number of dysfunctional radios were identified, others operating at less than specified levels, and a few were identified as operating well above the advertised specs. In all cases where a potential sale was in progress the results assisted the decision, and price setting process.

Pictures of testing at recent Ham Fest at Puyallup, Washington at the following URL.
http://pdxforsale.com/?ad=39535

Hope to see you there!

Thank you.

Let's not start this again, let's argue about something important,
like Morse code. Ain't enuff of you Apple Suckers and Penguin Pluckers
to be worth arguing with.

We need a new O/S, just for ham radio. We could call it Macnix. The
logo could be a roasted penguin with an apple in his mouth. And there
wouldn't be any application software so nobody would ask questions
about how to use it.....

73, Jim KH2D
Morse Code Sucks

Hi guys,
Not ham related, but I need a socket for my SIM chip.
This is the one that the SIM presses onto, and the actual pins press on the SIM.
The terminals for the socket are on the outside, going horizontal.
It is manufactured by ITT Cannon.
Anyone got any of these?

> 73, Jim KH2D
>
>

You are absolutely correct, but that wasn't the "strange URL" I meant. The
post
that started this thread is as follows (from June 12):

<quote>
The information about filing a FCC BPL comment on the ARRL web page was
outdated. There is a new case number that should be used. 04-37 is the
correct case number.

It only takes 5 minutes to file a comment with the FCC against BPL.

http://vambo.org/a/
<end quote>

Somebody else questioned it first, wondering why the FCC URL wasn't just
posted;
then somebody brought up paranoia. I seconded the paranoia and I stand by
it, at
least in principle.

vambo.org, searched on google, gave me no obvious ham radio links but a
little digging
identifies a Colorado ham associated with the site. (By "digging", I mean
google &

qrz.com; no hacker weapons here -- I'd probably shoot my eye out :-)

73,
John
KD6VKW

PS: While I was composing this, Norton Internet Security intercepted a
trojan attempt.
Who's paranoid? I am.

There use to be a theory that had something to do with getting a bunch of monkeys in a room in front of typewriters. They said that given enough time, these monkeys would recreate all the great literary works in the world. Apparently, one of those monkeys is still around and has upgraded to a computer and usenet. But he still top posts, so he has a way to go on the evolutionary chart yet.

R. Scott,

Looking at the Supernews website I see that they offer their service to ISP's. How would one find out if their ISP uses them? I don't see much spam, but I haven't been active here for long. As you can tell from my e-mail address I use Charter, but the notvalid is because I don't use that e-mail account. I use my University account which has descent spam filters. (I know that Supernews doesn't do e-mail, I was just curious)

The best, and probably the easiest, way is to ask your ISP.

# 3580. Wanted: Schematic for Tempo VHF-One 2m rig

Newsgroup: rec.radio.amateur.equipment
Date: 2004-06-17 18:54:02 UTC
From: k5dh@raytheon.com
Message-ID: <eNIAc.3$Ji2.2@dfw-service2.ext.ray.com>
Source record: 20832
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment

I'm in need of a schematic for a Tempo VHF-One
(not VHF-One Plus) 2m rig. I have a source for
the operator's manual. If you have a service
manual for this rig, that would be even better.

I don't want to pay a lot of money for this info.
I only paid $10 for the radio! If the manual and
schematic are gonna cost much more than that, I'll
just scrap the radio or sell it for parts.

73,
Dean K5DH

I am looking for the following

1. FBA-5A dry cell alkaline case
2. PA-3 Mobile DC power adapter (dc and trickle charge regulated)

If anyone has these laying around on a shelf at your ham shack and want to part with them, pleas esend me an email at jlange8@juno.com

Thanks, Jeff KB7GZE

# 3582. FS: Western Radio 3T96A 120 watt VHF Repeater Amplifier

Newsgroup: rec.radio.amateur.equipment
Date: 2004-06-17 21:27:16 UTC
From: t@rogers.canada
Message-ID: <fWgiYSiOQd92-pn2-FG1m29tFGyNK@localhost>
Source record: 20834
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment

Greetings:

I have a couple Western Radio 3T96A VHF repeater amplifiers for sale. They are rated for 120 watts output with a 4 watt drive. These are very large rack mount units and operate from their self contained 115V power supplies and have battery backup terminals on the rear.

Some specifications:

Power requirements: 117VAC at 3.7A for 120 watts
Power adjustable form 60 to 120 watts
Input = 4 watts
SO239 in/out connections at 50 Ohms
Spurious, Harmonic Emissions = 75db below carrier
Weight = 50 Kg or about 110 pounds
All Solid State, NO TUBES

Pictures:

http://www.sentex.net/tedds_place/3T96A-B-120-250-1-small.jpg

http://www.sentex.net/tedds_place/3T96A-B-120-250-2-small.jpg

http://www.sentex.net/tedds_place/3t96a-b-120-250-3-small.jpg

Complete service manual (copy) will be provided.

I'm located just outside of Kitchener, Ontario, Canada and would prefer pickup due to the weight. For the right people, I could meet you on the Canadian side of Niagra Falls, Sarnia, or Detroit for an additional fee (with gas at almost $4.00 a gallon, count on about $0.35 a Km, both ways).

Asking $250.00 each for the amps.

Any questions can be emailed to ve3tjd (at) rac.ca

Thanks,

Tedd, VE3TJD

Well it looks like i may have found some of the problem, after tracking down some of the voltages listed in the tech manual, i seem to have 2 x ï¿½PC1037H failed on the RX board, Q10 and Q11 since they are giving out no readings at all. ( DEAD )

now does anyone know where i can get hold of 2 x ï¿½PC1037H or there equivlents

thanks all

Any reason to prefer ordering from Allied Electronics or from Mouser, assuming that both claim to stock what I want at similar prices? I've never ordered from either before.

Or is there a still better company with which to deal?

Yes, now I remember hearing of them too. But as I thought of other
things to order at the same time (specifically some Anderson Powerpole
connectors), I found that Allied is the only one of the three that
carries them.

Apologies for following up to my own post, but I find that this Person
from Porlock^WPoland is trying to send mail to me. The two I got from
him, before I put up a sendmail rule to deny him access, were as fully
incomprehensible as anything I've seen him post to any group.

If you run your own mailserver, then something like this (sendmail-
specific) may be in order:

zorandi@EUnet.yu<tab>ERROR:550:5.7.1:"You are not allowed to do SMTP here. Go away."

where the <tab> represents a tab character.

Similar rules for the other E-mail addresses given in his mail to me
might prove useful:

zorandi2002@yahoo.com<tab>ERROR:550:5.7.1:"You are not allowed to do SMTP here. Go away."
nikaca2000@yahoo.com<tab>ERROR:550:5.7.1:"You are not allowed to do SMTP here. Go away."

If you don't run your own mailserver, but can pre-emptively declare
certain addresses to be undesirable, then you may want to consider
doing so with all three of these.

Cross-posted to:
misc.industry.electronics.marketplace,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,sci.electronics.equipment

The 497P is specified for coverage between 100 Hz and 7.1 GHz, but because this late-model unit shares its hardware platform with the top-of-the-line 494AP, I was able to calibrate it for the 494AP's full 21 GHz range. It is basically a 494AP without an OCXO standard and external-mixer jack.

This analyzer is in unusually-clean shape, and includes a cover and set of manuals. It would be a good economical alternative to a 494AP for any RF/microwave experimenters who can live without the waveguide mixer option.

http://cgi.ebay.com/ws/ebayISAPI.dll?ViewItem&item=3822660862

As an aside, this unit has the latest 49x ROMs I've run across (version 9.7 from 1992). The EPROMs were socketed, so I took the liberty of reading them to .BIN files. If anyone needs them to repair their analyzer, drop me an email and I'll send the images to you. These ROMs can support any 49x analyzer of similar vintage, including the 494AP, 492AP, 492BP, 492PGM, 495P, and the 2753-2756 line. (They probably would NOT work in older instruments such as the original 492/494/496 analyzers.)

# 3609. 440 Repeater

Newsgroup: rec.radio.amateur.equipment
Date: 2004-06-19 16:13:16 UTC
From: William Antonelli <wvantonelli@comcast.net>
Message-ID: <7fWdnRX7nYa8-0ndRVn-jg@comcast.com>
Source record: 20861

Hello everyone:

I have a near brand new 440 MHz repeater. This is the Motorola GR-1225 without duplexer. In addition I have the Motorola RSS version 3.2 used to program this units as well the M-1225 and the P-1225.

This is a Windows based software.

Repeater was used on my site and now I have replaced with a more expensive one.
Works great. I am giving this and the software for a Icom 706 MKIIG

If you are interested please email directly at:
wvantonelli@comcast.net

Or send your phone number and I will call you (Within the Continental US, Puerto Rico, US virgin island, Hawaii and Alaska only, please)

Thanks

Will, W7JM

> The Uncal light is on. What does it mean?

Usually it means you've selected a resolution bandwidth that's too
narrow for the span; e.g., the 100 Hz filter will be too narrow for use
in a 100 kHz/division span. (If you're a ham, that's like turning on
your rig's CW filter and then spinning its flywheel-weighted dial across
the band as fast as you can. You won't hear anything but a few muffled
clicks if you do that, because the filter doesn't have time to respond
to any signals.)

Turning the video filter off may help, too. It will 'smear' at fast
sweep rates just like the RBW filter.

The sweep time/division switch should be set to "Auto" for 99% of all
measurements with these analyzers. If you set it to a fast sweep time,
the Uncal light will come on. (Make sure this switch works properly; I
had a 492 once that sometimes failed to read the switch at power-up
time.)

>
> Also, the manual for this would be really great.

They are fairly common on eBay. Usually sold on CD as .PDF files (such
as http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=3821468630), but
once in awhile some originals will show up. Tek has kindly released
their copyright interests in the older test-equipment manuals, so there
are a lot of people selling reprints. I don't know this seller and
can't vouch for the quality.

You can also try http://www.manualsplus.com,
http://www.manualmerchant.com, and http://consolidatedsurplus.com.

Thanks.

I'll look at those pdf files on ebay.

The uncal light is unfortunately always on, none of the settings affects it. The controls seem to work, but they don't affect uncal led. I guess I really need the manual. Probably something in there that could explain it.

That would make me suspect the keyboard controller chip. In the 492, I ended up replacing it with a BASIC stamp (which I still have in the junk box somewhere; you're welcome to it if that's the problem).

Does your TIME/DIV knob do anything at all?

I think I left out a 'www.' on that one. You're right, it's the same
site as usimperio.com.

They have just about every manual on the planet, but the trouble is,
they only rent them. Consolidated Surplus's prices and policies are
very reasonable, but wait until you take a Tek 49x schematics volume to
Kinko's to have it copied. It costs a fortune and they *always* screw
it up somehow, because it's such a complex job.

The .PDF files are a much better deal, if they're legible at all.

Good point; he came up dry when I asked him about 497P manuals but he
may well have some for the 496. I bought a brand-new set of 494AP
manuals from him a couple of years ago.

He might have a keyboard controller, for that matter.

wanted in mint condition with original box and manual

# 3619. FS: Free: 70W 6M FM Equip. Estate Sale remnants. Berkeley Calif. Area Pickup only.

Newsgroup: rec.radio.amateur.equipment
Date: 2004-06-20 00:02:46 UTC
From: Doug Williams <DougWilliams@[nospam]>
Message-ID: <ef6d$40d4d423$42a74eab$26173@msgid.meganewsservers.com>
Source record: 20871

Free, for pickup only. This equipment is located in Berkeley California.

FM 2-way radio Base station.

This equipment can be re-tuned into the 6M ham band.

RCA 70 Watt 30-50 MHz FM base station.

This was removed from commercial service circa late 1960s.
It can be converted for use in the 6M amateur radio band.

Transmitter:

70 Watt RCA MI-316008 FM Transmitter. Type: CT-10B

Receiver:

RCA MI-31451 Receiver Type: CR-15A

It is vacuum tube technology.
It is housed in an enclosed rack cabinet.
The transmitter and receiver are on separate panels mounted
on rails in the center of the rack cabinet.

Rack approximate dimensions:
63"H X 22.5"W X 30"D (including front and rear door handles).

There are two mA meters on the front panel:
Grid current: 0-20mA,
cathode current: 0-300 mA

The other misc. equipment includes:

1. 4 variacs mounted in a ventilated metal box.
They were probably part of some light dimmer.
(dusty / dirty and in unknown electrical condition)

2. some Antenna insulators.
3. several power transformers.
4. some oil filled capacitors. (probably PCB oil).
5. Some selsyn motor transmitters/receivers. I don't remember the
voltage / frequency spec

on these.
6. some small induction motors with fans.
7. some small relays.

Sorry for the vagueness but this equipment is at my fathers house in Berkeley,
and I am in San Jose. We are trying to clear out the house to get ready to sell it.
If no one is interested I will probably remove the tubes and meters, and junk the rest.

Thanks.

# 3620. Last Weekend To File FCC Comment

Newsgroup: rec.radio.amateur.equipment
Date: 2004-06-20 02:15:47 UTC
From: yea right <spam@spam.spam>
Message-ID: <pan.2004.06.20.02.17.18.449419@spam.spam>
Source record: 20872
Cross-posted to: rec.radio.shortwave,rec.radio.amateur.swap,rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.swap

"The limit for an unintentional emitter on HF is 30 uV/m at 30 meters from the source," he said. "If you take a dipole cut for 3.5 MHz and put it in a 30 uV/m field, you'll have a noise reading of S9 plus 16 dB at your transceiver."

The FCC has extended the comment period for BPL. If you value radio, this may be the last and only chance to have your voice heard to stop BPL from destroying your hobby. The FCC has extended the comment period for BPL

Simple instructions are at www.vambo.org/a

Also posted below.....

It is VERY simple to file a FCC comment. Click the link below and enter

04-37

in box #1 (proceeding number) and fill in the blanks. The simplest way to comment is to type your comment into the box on the bottom of the form. Sample comment below.

http://gullfoss2.fcc.gov/prod/ecfs/upload_v2.cgi

If you see fit, please post this to as many groups as possible because numbers count! Please mention this in your nets!

More info at http://www.arrl.org/news/stories/2004/02/12/5/?nc=1

If you can't think of any thing to type or wish to make this as painless as possible, you can cut-n-paste the comment I typed below.

/******************************/

In Writing, I wish to persuade the FCC from allowing BPL to be implemented. The destruction or at the least, deterioration of the shortwave bands is not only a violation of ITU laws that protect international broadcasters from interference and jamming, it will be destroying many people's life hobby. Amateur radio will be reduced to users with high-power amplifiers and large antennas. Emergency communications will be hindered to levels directly responsible for the loss of life. Also, this will hinder military HF comms reducing national security

There are many technologies that make BPL unnecessary. BPL will never be able to carry the high bandwidth demands for mass distribution of video much less the up-and-coming HDTV.

Thank You!

Allied, Mouser, Digi-Key or Newark, doesn't seem to really matter. Sometimes one has an item/brand another doesn't. I often start w/ Mouser then Digi-Key.

What's all this fuss about BPL? Are the fussers trying to
make out that they're CBers who are unable to sort
out weaker signal reception? Ham Radio isn't about
broadcast-quality signals; it's about the technical
challenge of achieving communication under your
own efforts.

CBers might buy their rigs off-the-shelf and send them
back to the shop to be repaired when faulty but not _REAL_
Radio Hams!

Likewise, when there's a bit of QRN around such as BPL, that's no difficulty
for _REAL_ Radio Hams to sort out!

What puzzles me in that case is why are all of the functions/buttons working?
Yes, even the TIME/DIV works as expected, all positions. Same goes for other
buttons.

When I turn it on it always starts with some strange settings and I need to reset it,
perhaps the EEPROM or RAM has failed over the years. Or I don't know how to
store the settings.

Does anyone have experience putting a 2 meter rig in a Chevy S10? I have a 2002 S10 and want to put my 2M rig in it, but the service department either can not or will not tell me if it will interfere with the onboard computer. The only thing they would say is to connect it directly to the battery. Like I wouldn't do that anyway! Any experience, either positive OR negative, would be a help.
Thanks,
Terry

That's odd, all right. With my 492, I had to manually rotate TIME/DIV
back and forth into the AUTO position after power-up to get the
instrument to read it.

I'm not sure what would cause random or non-standard power-up settings
besides a flaky keyboard controller that doesn't respond to the CPU's
first few accesses after power up. The 496 doesn't have the capability
to store its settings in NVRAM like the 494 and later models, so it
shouldn't be a case of corrupted memory. The EPROMs are checksummed, so
if you don't receive any power-up error messages, they are OK.

I suppose one worthwhile test would be to make *sure* that the UNCAL
light is on for no good reason (as opposed to invalid startup settings).
Power it on, rotate TIME/DIV back and forth leaving it in 5
seconds/division (the slowest setting), and manually set the other
controls for 1 MHz RBW and 100 MHz/division sweep with no video

filtering. The UNCAL light should definitely not be on at that point.
If it is, you can disregard it for the time being if everything else
works right.

I'll poke around in my 492 manual and see if anything leaps out at me.

Terry,
While not having direct S10 experience, there are a couple 'general
rules' that will help. The first you have, and that is connecting
directly to the battery - fusing both positive and negative power
leads. The secon rule is to keep those power leads and the antenna
feedline as far away from the vehicles electrical harnesses and
on-board computer as possible. With my Nissan, the location of the
harnesses and computer were given in the owners manual and the Chevy
manual may list them as well; if not check with the service department
and ask for the information.

A related anecdote. When installing a dual bander in my previous
truck I used separate VHF and UHF antennas; when on the freeway one
day I keyed up on UHF using high power and found my speed dropping
until I un-keyed. Checked it out again (where there was little
traffic) and same thing ........ had to confirm it wasn't just a
coincidence. With no other cable routing options for the UHF antenna
I opted for a dual bander and a different cable routing and the
problem cleared up.

Good luck & 73,
Howard

I tried it, it all works fine or at least seems to, but the "Uncal" LED is on.

I'm reluctant to open it and see where this LED leads to check the logic.
If it goes to the microcontroller and the port is fried, it won't help me much
anyway. Besides, everything else works at this point. I hope its not an early
sign of something else going to hell later on.

Thanks for your help so far.

SioL

# 3647. ATV theory

Newsgroup: rec.radio.amateur.equipment
Date: 2004-06-21 17:06:11 UTC
From: achilles03@hotmail.com
Message-ID: <fef44ceb.0406210906.1f0065ae@posting.google.com>
Source record: 20749

I have a question in regards to the theory of ATV.

If I were to run a video signal straight into, say, a 70cm transmitter (staying within the linear range of the transmitter's input, i.e. not clipping) and had a receiver that had a video out / TV connected to the reciever's output (and could adjust the amplitude of the output signal), would that work?

Or do most "standard" (audio) transmitters/receivers have limitations about the maximum frequency they can modulate/de-modulate? It seems to me that the latter would be the only reason that ATV equipment would be nessesary. Or is there some other reason this scenario would not work?

On a side note, what's the lowest carrier frequency ATV can operate on before the video signal degrades or begins aliasing?

Thanks in advance for any information!
Dave

Wowee Airy, Most of us get our real communications achievements working field day and contests, know what I mean Bean? BPL isn't QRN either Bubba. It is grade A certified RF Interference that we just do not need. Depending on you're QTH (station location) It could be absolutely overwhelming.

Butch KF5DE

On an order for some military-style connectors I found Allied's price was
quite a bit higher than Newark's.

I am chasing up some accessories for a Kenwood TM-741a, I'm after the DTMF Microphone (MC-45DM) and the 6m Module (UT-50S), the 6m module is also used in other multiband models. I am happy to buy accessories that may need a bit of repair....
Thanks to all that have helped me recently in my hunt for parts :-)

That's it: The video signal has a bandwidth of a few MHz and needs frequency response down to DC. It's way beyond what the average transceiver is capable of.

The average radio has frequency response from 100 Hz to 3.5 KHz or so. Using direct discriminator/varactor connections gives wider response, but not wide enough. Dedicated ATV equipment is needed.

>On a side note, what's the lowest carrier frequency ATV can operate on
>before the video signal degrades or begins aliasing?

440 is the lowest band ATV is allowed on.

>Thanks in advance for any information!
>Dave

ATV is a neat mode. Have fun!

# 3654. Kenwood AT-130 Antenna Tuner For Sale on ebay...starting price $19.95

# 3659. Kenwood Rig ????

Newsgroup: rec.radio.amateur.equipment
Date: 2004-06-22 12:15:44 UTC
From: Bob <nubob5001@yahoo.com>
Message-ID: <NpVBc.11900$_V4.3141@read1.cgocable.net>
Source record: 20761

Hi

I am looking at a newer rig for both back up rig and or primary rig. I see a lot of Kenwoods TS 430, 440, and a few others. Anyone have any comments on these rigs? I believe the difference between them is that one requires the power supply? Is the 440's power supply within it?
Also are there analog rigs or digital in regards to using the computer interfaced with some of today's ham software?
Also, I have an old Drake TR-7, and although the cinch plugs look similar, what are the chances that the power supply will simply plug and play?
Any comments on these rigs? Worth the 300 or 400 they are going for? Anyone know of a good site that does sell something used, good condition?
Thanks
Bob

# 3662. TS-520 Oscillator Problem

Newsgroup: rec.radio.amateur.equipment
Date: 2004-06-22 17:09:12 UTC
From: Tim Wescott <tim@wescottnospamdesign.com>
Message-ID: <10dgptd685gl900@corp.supernews.com>
Source record: 20764
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew

I have a Kenwood TS-520 sitting on my shelf with a severe VFO problem.
The oscillator frequency intermittently goes unstable, when the
oscillator doesn't cut out completely. The problem will go away if the
tuning knob is bumped a bit, and it seems to be worse at the higher
frequency portion of a band. The radio is unreliable for receiving, and
is not good enough to even think about transmitting.

Without having ripped into the oscillator yet, I am theorizing that
there is a bad connection on the main tuning capacitor. Before I _do_
tear things apart, I wanted to ask:

1. Has anyone out there seen a similar problem? What did it end up being?

2. The oscillator in this rig is well buried, and will take some
careful disassembly to expose. Do any of you have a manual that details
this operation, or have you done it yourself? I'm well capable of doing
it as-is, but if there's a known best way to do it I'd like to start there.

Thanks in advance.

# 3673. Re: Kenwood Rig ????

Newsgroup: rec.radio.amateur.equipment
Date: 2004-06-22 17:56:49 UTC
From: Joshua G Senecal <senecal@ucdavis.edu>
Message-ID: <Pine.LNX.4.44.0406221020040.3098-100000@pc1.cs.ucdavis.edu>

> I am looking at a newer rig for both back up rig and or primary rig. I see a
> lot of Kenwoods TS 430, 440, and a few others. Anyone have any comments on
> these rigs?

I assume you mean that you are looking for a rig that is newer than what
you currently have. :) They were built in the 80s, as far as I am aware.
I own a TS-430s, and have used a friend's TS-440sat.

I like the TS-430s a lot. It's nothing fancy, but if you're looking for a
basic, solid rig, it'll do nicely. I use mine for occasional CW operating
from home (my on-air time is severely limited by two small children!) and
I have no complaints about it.

Some things about the rig that may be helpful:

- there's no full QSK. The TS-430s uses a VOX workaround that works well
enough, but getting the delay set properly can be a hassle. I personally
don't like listening to the relay click on and off, so often I will
manually switch my rig from TX to RX and vice-versa.

- you don't have a wide selection of filters. The rig comes with the SSB
filter installed, and you can install a CW and AM (wide) filter. But you
can't have a lot of filters installed and then select the ones that you
want to suit what you're doing (like on the Omni 6, for example). You have
two filter settings: narrow and wide, with the appropriate filter being
selected depending on your current operating mode.

- AM RX/TX. Almost nobody does AM anymore, but AM RX allows you to do SWL.

- FM TX/RX with add-on board.

- No DSP/noise reduction.

- The 430s requires an external, 20A power supply.

- Output power is adjustable via a pot. Sometimes the pot gets very
sensitive (due to age or whatever), so turning it just slightly will make
your output power jump from, say, 5W to 50W. Mine is like this. If you're
going to be putting out the full 100W or so (mine does 110W) this isn't a
problem, but if you have to do QRP like I do it makes tuning up an
exercise in patience.

Apparently you can control the TX power and other radio functions via an
outlet on the back of the rig, but I don't know what the pinouts are.

In short, it's a simple rig and there are no bells and whistles. If you
don't need a radio that looks like it has enough functions to launch the
Space Shuttle, the 430 may be what you want.

> Any comments on these rigs? Worth the 300 or 400 they are going for?

I paid about $450 for mine a few years ago--price included shipping from FL to CA. I got the TS-430s, a PS-430 power supply, an FM board, and a 500Hz CW filter. I also got the parts to an MC-60, which I managed to put back together with the help of a circuit diagram.

Are they worth the price? I don't have a lot of experience buying and selling rigs, but I'm satisfied with mine. Remember that these are older rigs, and the electronics, particularly in the final aplifier stage, have taken a lot of wear. Don't be surprised if something burns out.

Hi,,I am assuming that the VFO in the 520 is very similar to the one in the
TS 820 that I used to own.
The frequency counter did not always work in certain spots on the dial, and
of course the radio went dead at the same time.
I finally broke down and removed the VFO from the radio and opened the VFO
up. The main bearing of the tuning capacitor was not always making contact
because of dried up lubricant.
Don't remember for sure what I did to clean it, I used vaseline to
lubricate and reassembled the whole thing..It worked OK after that..

## 3675. Can a kenwood commercial mic work on a kenwood amateur radio?

Newsgroup: rec.radio.amateur.equipment
Date: 2004-06-22 18:23:06 UTC
From: Evan Platt <evan@TheObvious.espphotography.com>
Message-ID: <e5ugd0hkhogh9df5nt5o1foovrle050rnv@4ax.com>
Source record: 20777

My mike broke for my Kenwood TMG-707 ham radio. A replacement mike is about $20 on ebay, as well as is a commercial palm mike. I much prefer the look of the commercial hand mike - I don't need all the buttons or functions.

Does anyone know if the commercial 8 pin modular mike will work on an amateur radio? Kenwood didn't have an answer either way...

Thanks.

Evan

That sounds very plausible. I got the radio at a hamfest, and I think I
know why...

Did you have any trouble getting the oscillator out, or was it just a
matter of taking the usual care with such things? On my 520 it looks
like I have to go through a few layers to get to the VFO case.

From: * <*@*.com>
Message-ID: <2jsfglF158brfU1@uni-berlin.de>
Source record: 20782

On ebay at http://tinyurl.com/2ob99

RCA 7213 AF High power High frequency Transmitting Tube Ceramic. NOS 7213 is rare and desirable for use at UHF 1.5KW. Unused, good filament and no shorts. Coaxial socketed tubes. They are supposed to be a good tube for around 1200 MHz but are excellent for 432 MHz. These are HUGE and have a very large anode similar in diameter to an 8877 but not as tall. They have a pink cermamic on the sides. These tubes cost thousands of dollars each when new. http://www.surplussales.com/Tubes-Sock-Acc/TubeSpecials.html I was going to use it for a project, never got around to doing it.
data sheet at http://www.g8wrb.org/

On ebay at http://tinyurl.com/2rwl5

Decibel Tranceiver Duplexer DB4076W-A, 450 to 470, 4 resonant cavities

19 inch rack mount about 5 inches tall, 10 inches deep. From good working repeater, used about 5 months.

Source record: 20785

I have a Kenwood TS-50 that has Special Function 82 (Monitor) assigned to one of the 4 keys on the microphone. When I press this nothing happens (I expected to hear demodulated TX audio from the speaker when I talk). I tried assigning the Monitor Function to another button that is known to work and still nothing happens. So it's not the button.

Was the Monitor Function an option? Was it known not to work? Is there something I am missing?

On the internet I found two other people noting that the Monitor Function was not working on a TS-50 but no answers. This is not a major issue since the radio works fine in all other respects.

Might have to use headphones and turn the volume up. While I haven't tried
it on my TS-50, that's what I had to do one of my other Kenwoods.

<snip>

Thanks.

If that's the case, it doesn't rank up there as being anything of much
value to me (opening a squelch that I don't use on sideband). The
operating manual simply provided zero explanation for the function so
the assumption was that it should work like the "Monitor" function of
other radios. Guess not. (shrug)

Hello I have one Motorola Ht 750 16 channel UHF 450-520 with the DTMF Key pad for sale unit is NOS comes with everthing you get when you buy a new one battery antenna dust cover owners manual charger.This unit was never used it was purchased in error (wrong band split) Price is $ 365.00 Plus $10.00 shipping I ship via USPS Priority mail with del confirmation. Payment via US Postal money order. Thanks for looking

# 3691. Help FT-8100

Newsgroup: rec.radio.amateur.equipment
Date: 2004-06-24 14:45:53 UTC
From: Charlie Hugg <hug-a-bug1@cox.net>
Message-ID: <JOBCc.1438$Ch.498@okepread04>
Source record: 20793

I have just purchased a FT-8100 Dual Band Transceiver. It has had the all band transmit mod done to it. When I got it it worked fine, then I restarted the CPU, and now it will only tune 144 and 145 mHz. Does anyone have any ideas? Do I need to reset the band limits like I did on my FT-2400 after it waa modified? If so, how does one go about resetting the band limits?
Thanks, Charlie Hugg, K5MBX

Good point; he came up dry when I asked him about 497P manuals but he
may well have some for the 496. I bought a brand-new set of 494AP
manuals from him a couple of years ago.

He might have a keyboard controller, for that matter.

-- jm

I still think its not broken since everything works. Except if one of the ports controls
that led
as well.

Standard C468A 95% $100
Includes 1 CWC150A Wall wart

PacComm Sprint-2 TNC Like new,
With AD-4 Analog-to-Digital board
With cable for Kenwood TM451A $100 obo

Icom 02AT with BC-35, stock battery and wall wart.
And extra Ice brick battery $ 75

Maha MH-C777 Universal Charger-Conditioner LNIB $ 30

Dynamic Communications
Model A470-25 $ 20
Sold as is, no manual.

Model 10-0 $ 20
Sold as is, no manual.

Carver Audio Amp 95+%
Model M-2120
With Manual. $ 75

All items will include manuals, and any docs that I Have.

I have a lot of older computer parts/MOBS-CPUs/boards
ect. Everything from Rll,MFM to SCSII controllers.
contact me for what you are looking for.
I have an External Scsii CdRom changer that uses Pioneer
carts.

I also have a lot of C64's 3 good 3-5 fixable or parts.
Much peripherals - drives,printer,parallel/serial ports,
modems, tape drive, graphics pads, joysticks, ect.
AND a lot of cartridges, and software - games to productivity.
Included is all manuals, plus extra books for programming ect.
Included is software to run a bbs from the C64..
I would like to sell it all as one group. Will cost more,
if sold piecemeal....

$150 takes it all on the C64 equipment.

Shipping is NOT included

GM has a service bulletin posted somewhere on theier web page (I'll look for it later) that IIRC recommends direct connection at battery (right front of vehicle) of both pos and neg leads, both (IIRC) fused at the battery, using a NAPA or other side terminal extender bolt, and, IIRC, crossing to left side at front by radiator then rearward thru firewall. I believe the OBC is right side near firewall, and it should be well shielded to meet non optional part 15 requirements. Another practice I have seen recommended elsewhere is to twist the pair of wires as they run from battery to x-mitter, in order to reduce pickup or radiation (same concept as twisted pairs for CAT 3 & CAT 5, mic cables, TV twinlead, ladderline, etc.)

Ferrite beads could also be applied th the power leads to attenuate any RF that did make it out (or in), too, and may be needed elsewhere if something else proves noisy.

Ford states in a similar (though slightly less detailed) bulliten that their vehicles are designed for transmitters <100 watts output and recomments antenna (with good quality 95% min shield coax) on roof or center of trunk lid, but not on/near hood or front fenders, and not thru glass type for windows w/ built in AM/FM antennas, and not near defroster lines.

GM seems to be good about screwed (vs clipped) ground braid on their hoods.

Transmitters are a fact of life in small and large light trucks (utility, DPW, public safety, commercial, etc. service in addition to amateur, and full size sedans (police as well as others above).

Did hear a funny story a few years ago of a radio install that gave nothing but trouble when transmitter was keyed, seems they had wrapped excess antenna coax around an available box under the dash, turned out it was related to the computer control system, coax trimmed and relocated and end of problem.

# 3706. Ham Radio Deluxe v1.4 (build 425b) now available

Newsgroup: rec.radio.amateur.equipment
Date: 2004-06-25 16:44:01 UTC
From: igoruberwald@home.nl
Message-ID: <e9b53b2a.0406250844.544a8a3@posting.google.com>
Source record: 20708

Hi all,

The Ham Radio Deluxe Development Team is pleased to announce the release of Ham Radio Deluxe v1.4 (build425b).

This FREEWARE package is available from:

ftp://www.ham-radio.ch/kits/beta/1.4/HamRadioDeluxeVersion014b425.exe

and

http://www.ham-radio.ch/kits/beta/1.4/HamRadioDeluxeVersion014b425.exe

Changes since v1.3:

Macros now applied much faster, very noticable on Yaesu systems.

More IC-7800 support.

PSK31 Deluxe input/output level popups not initialising correctly has been fixed.

Added sound controls via the Tools/Soundcards menu.

IF Shift for ICOM: 746/746Pro/756Pro/756ProII/R75/7400.

Changed many ICOM sliders to show 0 - 100 instead of 0 - 255.

Made some parts of Mapper faster.

Added Digital-in (S/P DIF) sliders to Soundcard menu.

Added improved direct frequency entry, new option in the Tuning menu.

Reworking of band definition logic. The concept of locked definitions has now been removed, instead there is a set of default definitions and you can do what you want with them, similar in approach to the Favourites. Also the default custom band definitions are no longer shipped.

Changed Scan Favourites to Scan Frequencies, also reworked some of the internal logic.

Reworked some Mapper logic, mainly tidying up lose ends.

Made the DX Cluster window dockable at the bottom of the main HRD window.

Added a Web Page option - HRD can now upload a web page by FTP, substituting tokens in the web page template with the current

frequency, mode and radio model. Simon has added a page to his website as a trial- the URL is http://hb9drv.ham-radio.ch/radionow.htm. Note that we are still working on this.

Added the HRD Cluster Updates window which configures information sent to the HRD Cluster service on www.ham-radio.ch. The HRD Cluster web pages which are generated from this data are still being written.

HRD Remote - access your radio via the network - http://www.ham-radio.ch/forums/viewtopic.php?t=786

A logbook with QRZ.com lookup function .

The DX Cluster window now has a Submit Spot option

##########################

You must have the Microsoft Data Access Objects (DAO) installed on your PC to be able to run the logbook.

If you get an error message if you try to open the logbook window then here is the kit to install:

ftp://www.ham-radio.ch/kits/dao/dao35.zip

Unpack to your hard disk, then start setup.exe from disk1.

##########################

Anyone interested in using this FREE software is invited to join the Ham Radio Deluxe User Community at http://www.ham-radio.ch/forums where you will meet a friendly and knowledgeable group of people who will be able to help you with (most) problems you may encounter.

145, Pete/Igor PH1PH - G7ECN for the Ham Radio Deluxe Development Team.

Hello,

Just got done slaving over a TS-440S that has the well known VCO problem and can see it will take 10 hours or so to clean the VCO board using the technique that I am using. I read the tech service bulletin and it says it should take an hour, so I must be doing something "wrong".

I am using a tool that a dentist uses to clean teeth which is pointed and curved so you can get into tight places. Is this the best tool? If not what is?

Also, are there areas that one can do a sloppy job of removing the potting compound and are there areas that you should REALLY focus on to make sure it is clean??

Is it necessary to replace any components or can one "clean" the VCO PCB and re-align?

Any and all help and tips appreciated.

Thanks

Jim

I Think the original service bulletin called for removing the original
compound,changing the transistor, varactor diode and then re-potting
with hot glue..then tune the circuit as outlined in alignment section
of ser.man. GL w4pqw

I have a very good looking and working ft840 forsale.
Comes with original box manual mic and power cord.
It also has the Fm unit installed.
$400 shipped to the lower 48 states.
I also have a unopend service manual for $25 with the radio or + shipping
with out the radio.
No swaps please.
E-mail for picture of the radio.

I have two HTX-202 2 meter HTs in mint condition.

They come in the original box with manual, antennal,
wall charger, newly refurised 7.2 volt battery and belt
clip. Aesthetically and operationally they are a 10 of 10.

Also will include optional Radio Shack speaker mic.

$105 firm ships conus.

30 money back guarantee if shipped back in original
condition.

Thanks for reading this post.

I think it was much quicker and dirtier. Based upon the premise that technican's time was the most expensive item and that spare parts were in stock, the idea was to remove all of the parts with an desoldering station, pull them out as best they could with no concern for damaging them and putting in new ones.

Dump a glob of hot glue in, wait for it to cool and retune the PLL. This could be done in about an hour.

Having done the eqivalent mod on an R5000, I can say the other method, carefully removing the glue while trying not to damage anything, takes a lot more time and patience. It took me 4-5 hours with a tweezer and magnifying glass and I only crunched one disk capacitor.

I'll hazard a guess: Maybe at a "new in the box" Kenwood Dealer?

Google is your friend.
Twenty seconds there gave up a lot of good leads.

OK. I see you need more. "kenwood new dealer amateur"

Source record: 20737
Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap

Now you can have the best of both worlds with your Elecraft K2. When at your station, just plug in your K2 to the K2 Twin and you are ready to QSO with the KPA100 power amp and the KAT100 matching antenna tuner. When you decide to go QRP, unplug your K2 and you are off to the field! Requires presence of KIO2 module, firmware version 2.0 or greater in your K2, and a 20 amp power supply. No modifications are necessary. Note that the K2 Twin only works with a K2.

K2 Twin includes KPA100 100 watt amp and KAT100 100 watt auto tuner in an EC2 enclosure with connecting control and PC I/O cable, KPA100 power cable, RF connecting cable and manuals. Unit was quality assembled by one of the original K2 beta testers. Excellent condition cosmetically and electrically.

Indeed it is, Kenwood still shows it on their site though I recall
that once gone that's it as the TS-480 is their new HF mobile
offering. HRO listed the TS-50 at $649.95 and out of stock...so I
guess the price is irrelevant.

I remember the ads for these in PW etc. I wondering what they were. I
assume
some sort of shortened helical dipole with an ATU.

Do you know?

Yes, in fact it was a 6 ft pole with lumped inductance forming the end
loading for the so-called "feeder" , which in reality was a single 30ft
length of insulated wire, end fed from the transmitter via the Joymatch ATU
and tuned against earth.
I understand that due to the highest current portion of the wave being along
this "feeder", with highest voltage being in the lumped inductance, most of
the useful part of the signal was radiated by the "feeder" rather than the
antenna itself!
Nevertheless, the Joystick had its converts in those amateurs who found it
allowed them to operate from locations where normal sized antennas were
frowned upon or lack of space made it impossible to erect.
Whether they ever compared it to an end-fed random length of wire, I am not
sure.

I got a JoyStick (the pole) and a JoyMatch (the ATU) in 1965 or 1966.
The combination wasn't very effective and performed more poorly than an
end-fed random wire to which I did compare it.

However, my JoyMatch, which I still have, doesn't look anything like
the one on Ebay. Mine is a simple L network tuner, nicely made of a
tapped coil on PVC and a 365pf capacitor in an open configuration
without cabinet. A label on the coil says JoyMatch. I still use it
with an ICOM IC-PCR10000.

<< Did you have any trouble getting the oscillator out, or was it just a matter of taking the usual care with such things? >>

Tim-

I was considering purchase of a TS-520S, but it had a very similar problem when I tried it. Unfortunately it was gone by the time I figured out how to get into the VFO.

I found a service manual on the web, it may have been at http://www.mods.dk. It appears that you only need to remove a few screws and front panel knobs, and the front panel comes off with the VFO attached. I believe there is a co-ax cable and a power cable at the rear of the VFO that can be unplugged, with a single screw holding the shield to the VFO.

The way it acted was almost identical, working smoothly at the low end of the band, but acting erratic above about 100 KHz or so. By the "feel" of it, I was convinced that there was something like a wire that was touching capacitor plates when they opened up to the critical frequency. However, the suggestion that it might be a bad rotor contact, is also plausible.

Good Luck!

Gotcha...thanks for the response! However, based on what you've said,
"what if" I were to do what I described on AM? Technically, assuming
you were using a high enough frequency to prevent aliasing, you
"could" transmit a video signal with a simple AM transmitter and
receiver...or am I mistaken?

Thanks in advance!
Dave

With Ed's link to a manual I think I know how to do it -- it _should_
have occurred to me to take the front panel off!

Now I just need to find the time, and if the bearings _are_ dried out
I'll need to decide what to put back in.

I wonder just how many different versions there are? Mine (Joymatch
IIIb) is in a very solid Hammerite-finished case with coloured plastic
covers front and rear. It's just an ordinary L-match inside - although
reasonably well-made. Oddly enough there's no provision for a
ground/earth connection at all on the tuner itself: that must have
caused a few surprises to unwary users in the past :-)

Most (all?) ATV activity on 70cm is AM. You still have the video bandwidth
requirements in your modulation circuits and getting the modulation
linearity needed for a good picture isn't trivial.

# 3754. HAM Radio equipment suggestions

Newsgroup: rec.radio.amateur.equipment
Date: 2004-06-28 15:29:07 UTC
From: rlangly@gmail.com

Hi all,

I've been studying for my Ham license over the last week, and if all goes well I'll be licensed in a few weekends with any luck :) So now the big step -- which radio to go with.

As I said, I'm a total rookie to the Ham radio world, so I have no idea what I'm looking for. I've just started reading-up on frequencies, so I'd like to find something that'll handle a majority of (if not all) the frequencies I'll be licened to use. Also I'd love a baseunit with PC software that'll allow me to control the radio via my computer. This isn't a must, but it'd be nice to have.

Also what antenna would you guys suggest? I live in the country, so I'm unrestricted on what kind of antenna I deploy. Also since I live kinda far out I'd like to have a radio powerful enough and antenna high enough to reach the larger cities around me (15-20 miles away as the crow flies).

Pricerange is $200-$400, but I can go abit more if needed. I want to buy something with TONS of stuff I have no clue about so I can learn :)

My future goals are to eventually setup an IRLP repeater since I do have broadband, plus a good friend of mine lives some 1500 miles away and there's an IRLP repeater not far from him. Also I'd love to give back to the local HAM group (what little of a group there is anyway). I also ran across this guy's website - http://www.gravitywell.org/index.htm - and I'd love to get a rig going like his.

Thanks for any comments or suggestions, and take care --

- Ringo -

Would that be the same as the Kenwood TM-211(E - for European
splits - tone , etc.) ?

I get 12 Google hits on "Trio TM-211".
I get 65 hits for "Kenwood TM-211".

Hi,
Welcome in the world of ham radio! ;-)

Here are some useful tips,
http://www.astrosurf.com/lombry/menu-qsl.htm
mainly about antennas, how to select a transceiver, but all is
interesting...

Thanks,
Yes I get a good few 'hits' but they're mostly out of band mods.
I'm specifically looking for the User Instructions. I'm trying
to ascertain whether this radio's doing some weird things because
it's been modded or whether it's just plain not user friendly...
The User Instructions might help...
Thanks again.

Sorry to hear you're bailing out, Dwight.

I've been thinking about getting myself one of these (the
black model) for myself for my birthday in August. Too bad
I don't do ebay. I might have been interested in a direct
sale.

The Kenwood looks interesting too.

73,

Your most efficient buy would be an Icom 706 mk11g or Yaesu 857d. You
don't say what bands you will be licensed for -- I'm assuming it'll be
vhf/uhf. These rigs will give you 6m/2m/70cm, plus the hf bands, and
every popular transmitting mode, for about $7-800, plus the cost of a
power supply. Your $2-400 will get you no more than an FM-only rig for
one or two vhf bands, and you'll still need a power supply.

With the all-mode rigs, you would be able to do ssb & cw, station to
station contacts -- pretty exciting stuff, compared to simply trying
to hit some FM repeater, which is sorta like shooting fish in a
barrel, as radio things go.

Have fun...

Hi, I'm looking for a UT-10 module for the TS-790A, so I can run 1.2GHz. If you have one for sale, or know of someone that does, please email me.

Thanks! email: n2tebNOSPAM@comcast.net

# 3779. FS: IBM Thinkpad laptop for DXpeditions and Rig Control

Newsgroup: rec.radio.amateur.equipment

Hi all--While this may be a bit OT for this group, I have a virtually new IBM Thinkpad T42 (Type 2374-FS3)laptop for sale which would be perfect for those DXpeditions or to run the latest radio control and/or software based signals analysis software.

Here are the specifics of the laptop:

Intel Pentium Mobile 1.70GHz CPU (IBM's top of the line)
512MB RAM (expandable up to 1.5GB)
60GB Harddrive
DVD Rom/CD-RW combo drive builtin
802.11a/b/g wireless LAN card builtin
10/100/1000MHz Wired LAN card builtin
56k v.90 modem built in
2 PCMCIA card slots free
15" Active matrix XVGA display (1200x 1600 max res)
64MB Radeon 9600 Video card
Windows XP Pro installed (includes OS)
Microsoft Office 2003 installed
Norton Antivirus installed
IBM laptop connectivity and utility package installed
2 USB ports, 1 parallel port, 1 serial port, external monitor port
Integrated sound card w/Mic and headphone ports
Power supply charger
Brand new IBM battery
IBM Executive Nylon carry case

In other words, this machine is loaded. I paid over $2300 less than a month ago, but I am asking $1650 plus $25 shipping to the lower 48 states. Am willing to ship overseas but price will be determined by your location and preferred method of shipment.

Please see the CNET reviews of this PC at

http://reviews.cnet.com/IBM_ThinkPad_T42/4505-3121_7-30871787.html

Please reply to me at wampus@nc.rr.com .

Thanks!
Chuck

## 3780. what justify so high price... nothing

Hi,

Compare these prices for the Cuschcraft MA5B :
http://www.durhamradio.com/cushcraft-ma5b.htm $599

http://www.chq-inc.com/asp/details.asp?mod=MA5B&man=cush, less than $400

The first deny any eplanations, so someone could help me to understand why
Keith sold this antenna at such a price...

Thanks in advance.

Because someone was willing to purchase it at that price?

> Thanks in advance.

You are welcome.

I suspect a problem of currency, but the dealer refuses to explain and keep
a deep fog around its advertisings.
Not smart. I prefer to go away, for example to CHQ...

Any info about this price difference is welcome to complete the information
published on my website
http://www.astrosurf.com/lombry/qsl-portable.htm
